Algorithm 3.1 Algorithm for finding nodes reachable from X given Z via active trails

```
Procedure Reachable (
          \mathcal{G},
                 // Bayesian network graph
         X,
                 // Source variable
                 // Observations
      )
1
             // Phase I: Insert all ancestors of oldsymbol{Z} into oldsymbol{A}
2
         L \leftarrow Z
                        // Nodes to be visited
         A \leftarrow \emptyset
                         // Ancestors of oldsymbol{Z}
3
4
         while L \neq \emptyset
5
            Select some Y from L
6
            L \leftarrow L - \{Y\}
            if Y \not\in A then
7
               \boldsymbol{L} \leftarrow \boldsymbol{L} \cup \operatorname{Pa}_{\boldsymbol{Y}}
8
                                         // Y's parents need to be visited
9
            A \leftarrow A \cup \{Y\} // Y is ancestor of evidence
10
11
             // Phase II: traverse active trails starting from X
         L \leftarrow \{(X,\uparrow)\} // (Node, direction) to be visited
12
         V \leftarrow \emptyset // (Node, direction) marked as visited
13
         R \leftarrow \emptyset // Nodes reachable via active trail
14
         while L 
eq \emptyset
15
16
            Select some (Y, d) from L
17
            \boldsymbol{L} \leftarrow \boldsymbol{L} - \{(Y,d)\}
18
            if (Y, d) \notin V then
               if Y \notin \mathbf{Z} then
19
                   R \leftarrow R \cup \{Y\} // Y is reachable
20
21
               V \leftarrow V \cup \{(Y,d)\} // Mark (Y,d) as visited
22
               if d = \uparrow and Y \notin \mathbf{Z} then // Trail up through Y active if Y not in \mathbf{Z}
23
                   for each Z \in Pa_Y
                      \boldsymbol{L} \leftarrow \boldsymbol{L} \cup \{(Z,\uparrow)\}
24
                                                     // Y's parents to be visited from bottom
25
                   for each Z \in Ch_Y
26
                      L \leftarrow L \cup \{(Z,\downarrow)\} // Y's children to be visited from top
27
               else if d = \downarrow then // Trails down through Y
28
                   if Y \notin \mathbb{Z} then
29
                         // Downward trails to Y's children are active
                      for each Z \in Ch_V
30
31
                        L \leftarrow L \cup \{(Z,\downarrow)\} // Y's children to be visited from top
32
                   if Y \in A then // v-structure trails are active
                     for each Z \in Pa_Y
33
                        \boldsymbol{L} \leftarrow \boldsymbol{L} \cup \{(Z,\uparrow)\}
34
                                                    // Y's parents to be visited from bottom
35
       return R
```
