Compiled with C2

Chris Newland - 16th April 2014

# WhatSpot?

- Java HotSpot Virtual Machine
  - Bytecode interpreting stack machine
    - No registers
    - Variables pushed onto stack
  - Just In Time (JIT) compilers
    - Profile Guided Optimisation (PGO)
    - Compile bytecode to native code

Tiered	Non-Tiered	-Xint	-Xcomp
2.9s	2.6s	80.5s	4.4s

\*Horrible unscientific benchmark  
(com.chrisnewland.jitwatch.demo.MakeHotSpotLog)

# Talking JIT

- Client compiler (C1)
  - Starts quickly, simple compilation to native
- Server compiler (C2)
  - Waits until more information available
  - Loop unrolling, **Inlining**, Dead Code Elimination, Escape analysis, Intrinsics, **Branch prediction**
- Tiered Compilation (C1 + C2)
  - Default in Java 8
  - Enable in Java 7 with `-XX:+TieredCompilation`
  - Best of both worlds?

# Explain yourself!

- Enable JIT logging
- -XX:+UnlockDiagnosticVMOptions
- -XX:+LogCompilation
- -XX:+TraceClassLoading (JITWatch)
- -XX:+PrintAssembly
  - Required hsdis binary in jre/lib/<arch>/server
  - Significant performance overhead
  - <http://www.chrisnewland.com/building-hsdis-on-linux-amd64-on-debian-369>

# I heard you like to grep?

```
<task compile_id='23' method='java/util/ArrayList$Iter  
checkForComodification ()V' bytes='23' count='9006'  
backedge_count='1' iicount='44000' st  
amp='1.603'>  
<phase name='parse' nodes='3' live='3' stamp='1.603'>  
<type id='680' name='void'/>  
<klass id='776' name='java/util/ArrayList$Iter' flags='2' />  
<method id='777' holder='776' name='checkForComodification'  
return='680' flags='16' bytes='23' iicount='44000' />  
<klass id='781' name='java/util/ConcurrentModificationException'  
unloaded='1' />  
<uncommon_trap method='777' bci='14' reason='unloaded'  
action='reinterpret' index='47' klass='781' />  
<parse method='777' uses='44000' stamp='1.604'>  
<bc code='180' bci='4' />  
....
```

- Logs can be > 50MB
- Much bigger with disassembly!
- Let's build a visualiser!

# JITWatch

- <https://github.com/AdoptOpenJDK/jitwatch/>
- JIT Compilation
  - When? (time, invocations)
  - How? (C1, C2, Tiered, OSR)
- Decompiles
  - Back to bytecode interpretation (Why?)
- Inlining - successes / failures
- Branch probabilities - taken / not taken
- Intrinsics

# Inlining (C1 + C2)

```
int a = 3;  
int b = 4;  
int result = add(a, b);  
...  
public int add(int x, int y) { return x + y; }
```

```
int result = a + b;
```

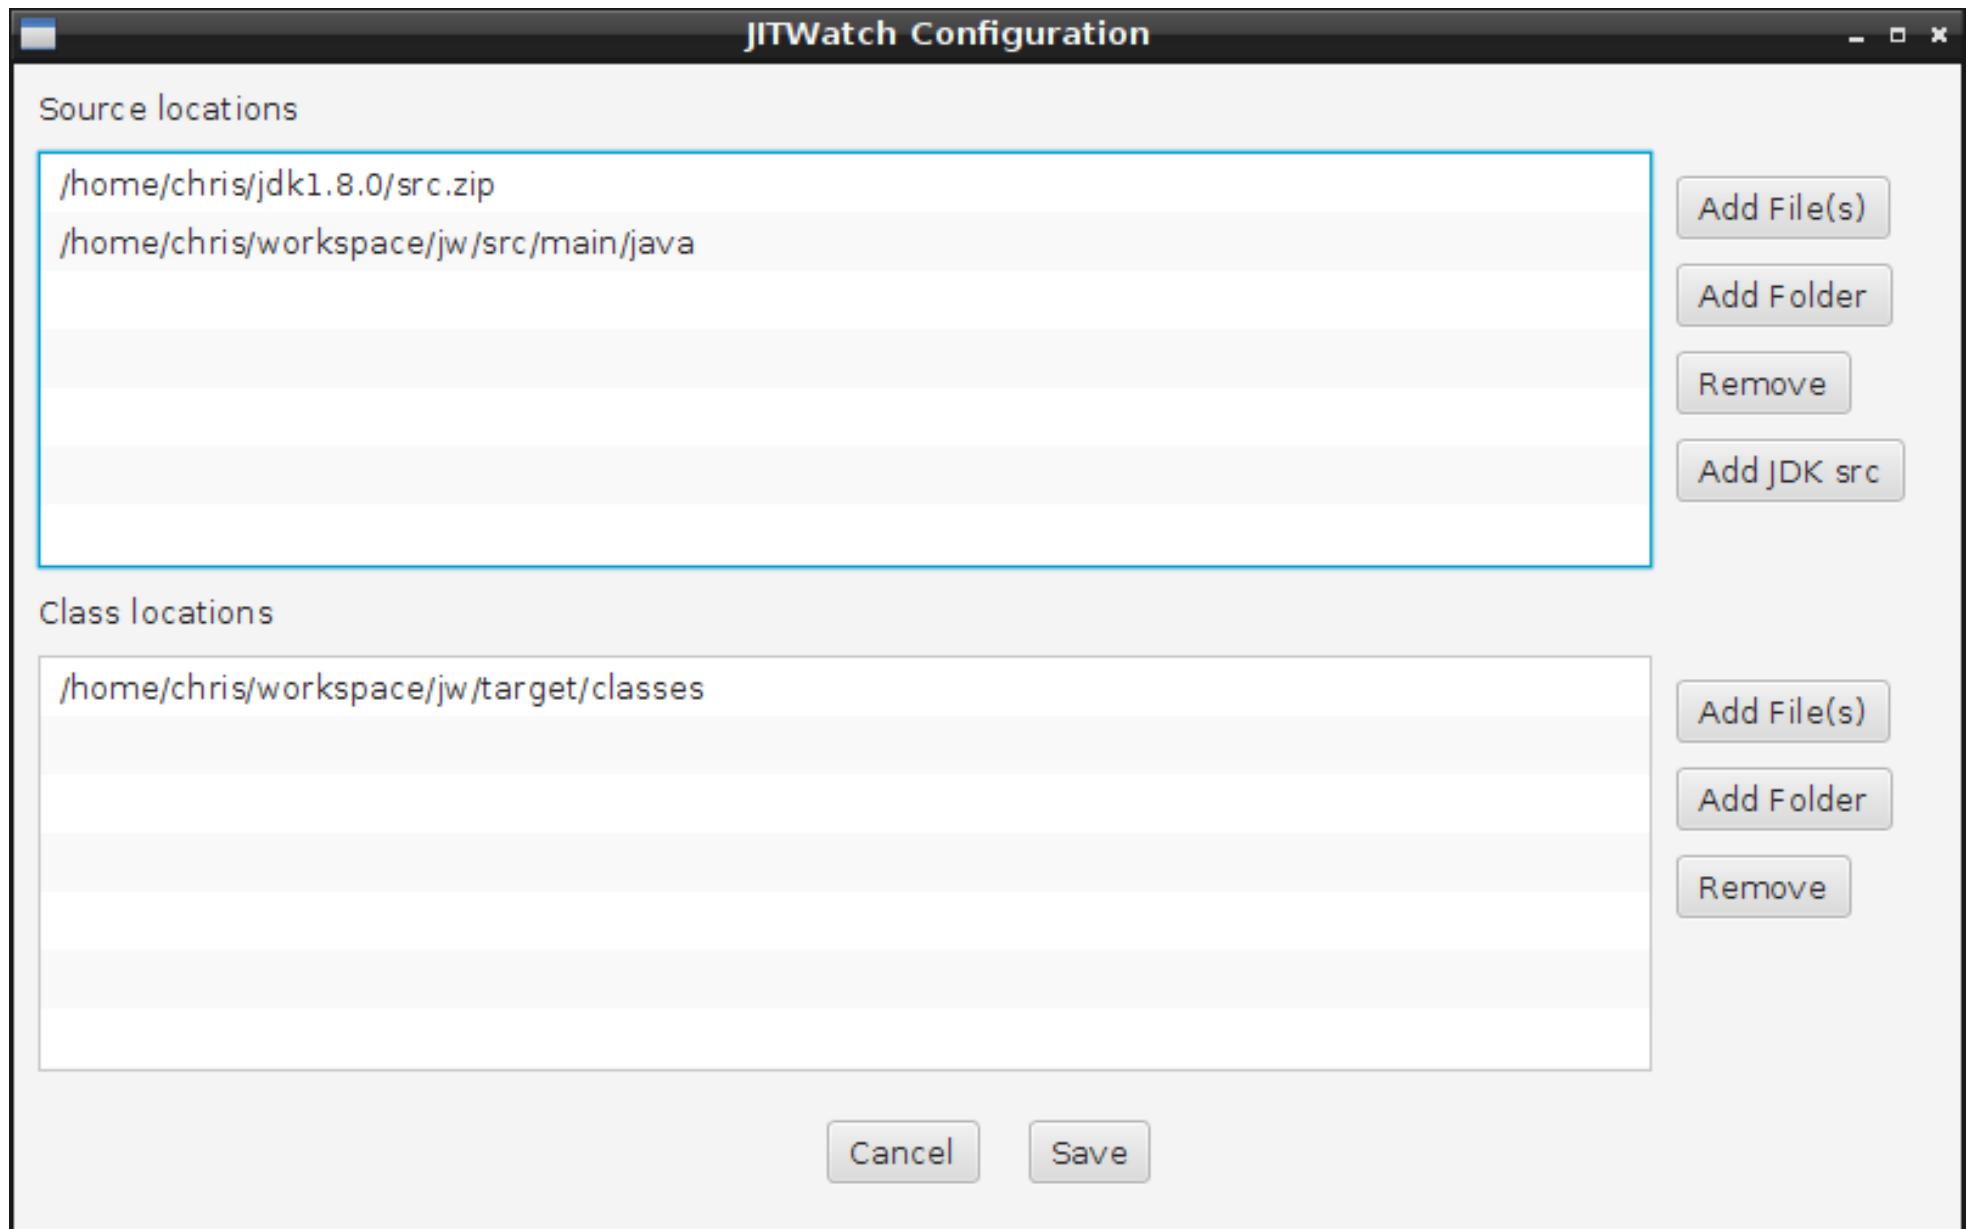

# Branch Prediction (C2)

```
// make an array of random doubles 0..1
double[] bigArray = makeBigArray(1_000_000);

for (int i = 0; i < bigArray.length; i++)
{
    double cur = bigArray[i];
    if (cur > 0.5) { doThis();} else { doThat();}
}

// branch will be taken ~50% of time
// sorting the array will make it more predictable
```

# Compile Chains

# Code Suggestion Tool

JITWatch Code Suggestions			
Score	Type	Caller	Suggestion
21904	Branch	com.chrisnewland.jitwatch.demo.MakeHotSpotLog private void randomBranchTest(int) <a href="#">View</a>	Method contains an unpredictable branch at bytecode 24 that was observed 43807 times and is taken with probability 0.50129. It may be possible to modify the branch (for example by sorting a collection before iterating) to make it more predictable.
18634	Branch	java.lang.Integer public static Integer valueOf(int) <a href="#">View</a>	Method contains an unpredictable branch at bytecode 3 that was observed 37268 times and is taken with probability 0.498927. It may be possible to modify the branch (for example by sorting a collection before iterating) to make it more predictable.
18002	Branch	java.lang.Integer public static Integer valueOf(int) <a href="#">View</a>	Method contains an unpredictable branch at bytecode 3 that was observed 36004 times and is taken with probability 0.499195. It may be possible to modify the branch (for example by sorting a collection before iterating) to make it more predictable.
12673	Inlining	com.chrisnewland.jitwatch.demo.MakeHotSpotLog private long chainA4(long) <a href="#">View</a>	The call at bytecode 3 to Class: com.chrisnewland.jitwatch.demo.MakeHotSpotLog Member: private long bigMethod(long,int) was not inlined for reason: 'hot method too big' The callee method is 'hot' but is too big to be inlined into the caller. You may want to consider refactoring the callee into smaller methods. Invocations: 12673 Size of callee bytecode: 350
12673	Inlining	com.chrisnewland.jitwatch.demo.MakeHotSpotLog public void tooBigToInline(int) <a href="#">View</a>	The call at bytecode 15 to Class: com.chrisnewland.jitwatch.demo.MakeHotSpotLog Member: private long bigMethod(long,int) was not inlined for reason: 'hot method too big' The callee method is 'hot' but is too big to be inlined into the caller. You may want to consider refactoring the callee into smaller methods.

# JarScan Tool

- Statical analysis of a jar
- Methods with bytecode > inlining threshold
- These methods might not be hot
- Around 3000 non-inlineable methods in rt.jar
  - String.split
  - String.toUpperCase / toLowerCase
  - Core parts of j.u.ComparableTimSort

# TL;DR

- Eliminate other performance issues first
- Keep your methods small for inlining
- Turn on JIT logging
  - JITWatch suggestion tool
    - “hot method too big”
    - Unpredictable branches
- Learn about the JVM :)

Premature optimization is the root of all evil

Donald Knuth
