Controls

Transformations supported are affine transform: Scaling (inc. Homothetic), Rotation, and Translation (Move).

Scaling and Rotation both have pivot - transformation origin, and its pivot is movable. Another term for scaling when pivot is not in the initial origin is Homothetic transformation.

Translation can be applied to an object or a single anchor point (vertex) of an object.

Whenever an object or anchor is clicked upon while transformation tool is active, the target is selected and able to be deleted.

More information is explained on the next page and Property section.

Transform Tool

(key)

Q

Scale Tool

Hold Q or Shift + Q for toggle

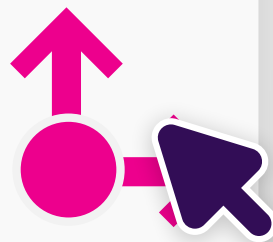

W

Rotate Tool

Hold W or Shift + W for toggle

E

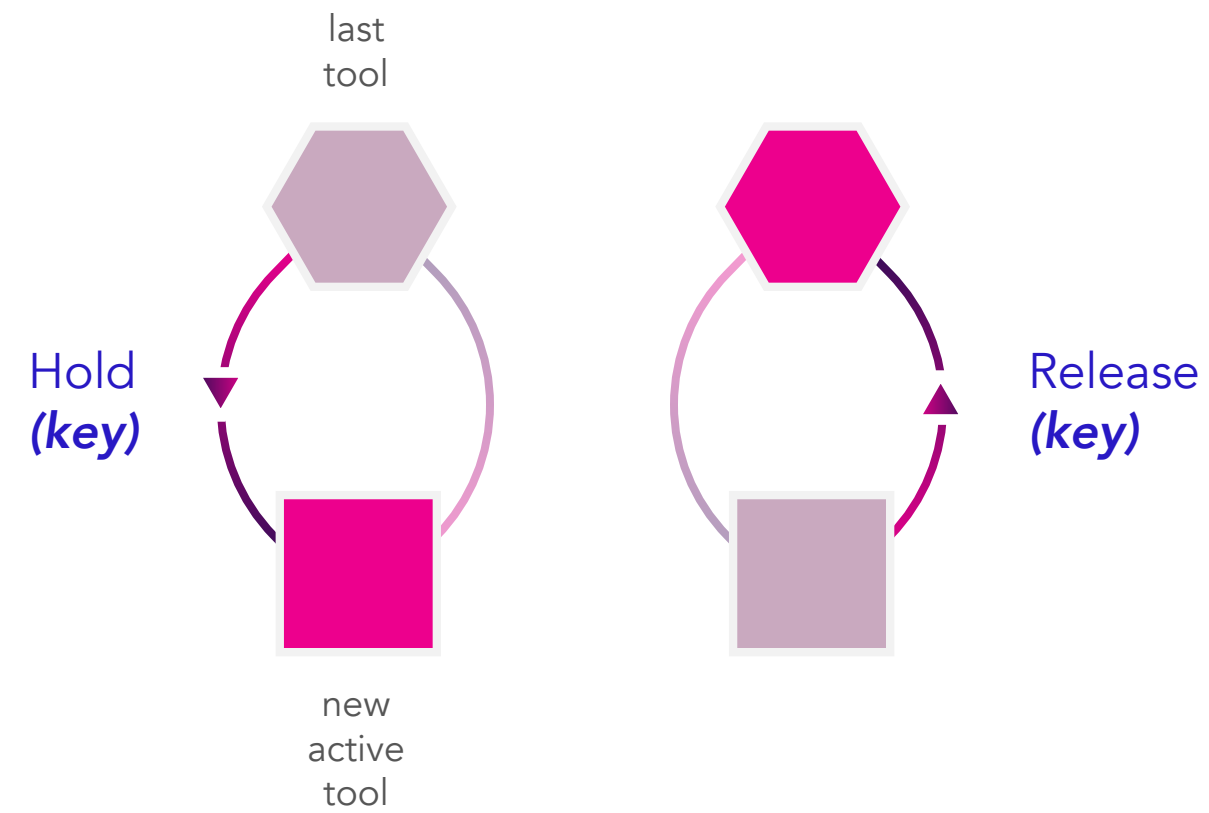

Move Tool

Hold E or Shift + E for toggle

While selected, hold  to move anchor point
