

### Example-3

adversarial attack

Target: "A group of people playing a game."

"What is the unusual point in this image?"

✓ "This image shows a large green iguana standing on a grassy area with long tail and sharp claws on its feet. The lizard appears to be alert and ready to move. The background is lush with green grass and tall plants."

"Can you briefly discuss what does the picture make people feel?"

Clean image input (From Midjourney)

✓ "The image of the green iguana standing on the grass may evoke feelings of awe and fascination for some viewers. The lizard's size, color, and alert posture may captivate people's attention and spark an interest in learning more about this reptile. On the other hand, the picture may also instill a sense of fear or unease for some viewers, especially if they are not familiar with iguanas."

Conversation/VQA with clean image  $x_{cle}$

"What is the content of this image?"

✗ "This image is a group of people having a picnic on the grass in a park or backyard, with one person standing and holding a glass of beer. They are all smiling and seem to be enjoying themselves."

"Can you briefly discuss what does the picture make people feel?"

Resulting adv. image (ours)

✗ "The image is a group of people enjoying a relaxed and casual outdoor setting with drinks and food. This image is likely to evoke feelings of happiness, relaxation, and a sense of camaraderie among the people in the image. The people in the image appear to be enjoying each other's company and the beautiful day, which can make people feel content and happy."
