

$$W = U \Sigma V^T$$

$$= \left(\begin{array}{c|c|c} U_p & \Sigma_p & V_p^T \end{array} \right)^{W_p} + \left(\begin{array}{c|c} B_m & \sqrt{\Sigma_m} \end{array} \right)^{B_m} \left(\begin{array}{c|c} \sqrt{\Sigma_m} & V_m^T \end{array} \right)^{A_m}$$

Diagram illustrating the initialization of the matrix W as a sum of two components. The first component is a product of three matrices: U_p (blue), Σ_p (red), and V_p^T (purple), grouped by a light blue box labeled W_p . The second component is a product of two matrices: B_m (orange) and A_m (green), grouped by a light orange box. The matrix B_m is shown as a product of U_m (blue) and $\sqrt{\Sigma_m}$ (red). The matrix A_m is shown as a product of $\sqrt{\Sigma_m}$ (red) and V_m^T (purple). Arrows indicate the decomposition of B_m and A_m into their constituent matrices.

(a) Initialization

$$W = W_p + B_m A_m$$

Diagram illustrating the finetuning of the matrix W . The matrix W (blue) is equal to the product of the frozen part W_p (blue box with a frozen cube icon) and the product of the new matrices B_m (red) and A_m (purple) (yellow box with a flame icon).

(b) Finetuning
