Introduction and Highlights of
Statistics

Introduction

The 2017 Annual Report of births, deaths, stillbirths, marriages and domestic partnerships is compiled by the Vital Statistics Unit of Service Nova Scotia. Data on vital events occurring in Nova Scotia has been published since 1917. The information presented in the following charts and tables is based upon data collected on vital event registrations.

The *Vital Statistics Act* (Chapter 494 of the Revised Statutes of Nova Scotia, 1989) requires that all births, deaths, stillbirths, marriages, and domestic partnerships in the province be registered with the Vital Statistics Office.

Vital Statistics is also responsible for administration of the *Solemnization of Marriage and Change of Name Acts* of Nova Scotia.

The provincial registration system serves two primary functions:

1. to obtain and preserve the documentary evidence necessary to provide individuals with official proof of the facts concerning a birth, death, stillbirth, marriage or domestic partnerships; and
2. to provide information and statistics to health professionals and planners for public health surveillance, health education and promotion, epidemiological research, and health planning.

Vital Event Data

This report summarizes information on vital events that occurred in the province to Nova Scotia residents. It excludes events to non-residents except where specifically noted. Statistics relating to Nova Scotia residents who gave birth, were married or died outside the province are also excluded. Marriage statistics summarize all events that occurred in the province to either residents or non-residents.

To maintain confidentiality, identifying information for individuals is not disclosed. Nova Scotia Vital Statistics, along with all other Canadian provinces and territories, shares data with Statistics Canada for further compilation, analysis, reporting, and comparison. Information on vital events that occur to Canadians outside their province of usual residence is made available through their publications.

Time Periods

This report covers events occurring in the calendar year 2017. Selected tables present aggregate data across a number of years.

Population Data

Population estimates were provided by the Demography Division of Statistics Canada.

Medical Coding

Medical Certificates of Death and Stillbirth provide information on the immediate cause of death or stillbirth, antecedent causes giving rise to the immediate cause, and other significant conditions

contributing to the death or stillbirth. The World Health Organization's International Classification of Diseases (ICD) coding scheme is used to assign the appropriate medical codes. This information is processed by Statistics Canada in Ottawa, using scanned images of Registrations.

Since the early 1900's, the International Classification of Diseases has been revised regularly in order to reflect advances in medical science and changes in diagnostic terminology. The ninth revision of ICD (ICD-9) was used for medical coding until 1999. Coding according to the tenth revision of ICD (ICD-10) was implemented nationally as of January 1, 2000.

Acknowledgments

Vital Statistics would like to acknowledge and thank the many groups and individuals who ensure complete and accurate recording of vital events, including our division registrars of births, deaths, and stillbirths located in hospitals and funeral homes, deputy issuers of marriage licenses, physicians who certify causes of death and stillbirth, and the Provincial Medical Examiner's office at the Department of Justice. Vital Statistics also wishes to thank and acknowledge Sarah Galloway, Research and Statistical Officer for Vital Statistics, for her contribution as the primary author of this report.

Summary of Operating Statistics

Vital Statistics is mandated to provide the public with services relating to vital events that occur in Nova Scotia, in accordance with the *Vital Statistics Act*. To meet this mandate, the office is responsible for maintaining the provincial registry for births, deaths, stillbirths, marriages, and domestic partnerships and for issuing certificates for these events. The registry maintains data that assist in the decision-making process for health planning and monitoring, policy formulation and comparisons with other jurisdictions across time, and for preparing statistics for the public for business planning, trend analysis, etc. Additional services, provided under the *Solemnization of Marriage Act* and the *Change of Name Act*, include: registration of clergy and civil marriage officiants, issuance of marriage licenses, and registering legal changes of name.

Summary of Vital Events

Since 1952 the population of Nova Scotia has increased by approximately 46%. Demographic and social changes have had a dramatic impact on vital events. The birth rate has fallen to less than half the rate seen in the early 1960's, yet mortality rates have remained more or less static. The net result, in 2017, is a 'natural decrease rate' of -1.4, as the number of deaths were greater than the number of births this year. Emigration and immigration are not included in natural population growth rates.

- In 2017 there were 8,197 live births in Nova Scotia to NS residents. The number of live births decreased by 80 births from 8,277 births in 2016. The birth rate is 8.6 births per 1,000 population.
- There were 9,494 deaths of Nova Scotia residents in 2017, 554 more deaths than the previous year. The death rate was 10.0 deaths per 1,000 population. The leading causes of death in Nova Scotia are diseases of the circulatory system and cancer; in 2017, deaths from these causes made up 54.2% of all deaths.
- A total of 4,138 marriages were solemnized in Nova Scotia in 2017. The marriage rate per 1,000 population is 4.3, lower than the 2016 rate. Marriage statistics include all marriages that took place in the province, including those where one or both parties were non Nova Scotia residents.
- Same-sex marriage was legalized in Nova Scotia in September of 2004. During 2017, there were 126 same-sex marriages solemnized in the province. Of those marriages, 39 were of male couples, and 87 were of female couples.
- There were 63 stillbirths to residents of Nova Scotia in 2017. The stillbirth rate was 7.7 per 1,000 total births (live births and stillbirths).
- In 2017 there were 33 infant deaths (age at death less than 1 year) in the province, for an infant mortality rate of 4.0 per 1,000 live births. Of these 33 infant deaths, 24 were neonatal deaths, occurring to infants under 1 month of age. The infant death rate in the past five years has ranged from 3.5 to 4.7.

Summary of Stillbirth, Maternal Death and Infant Death Statistics

- Stillbirths are defined as delivery of a fetus that is 500+ grams in weight or 20+ weeks in gestation and where there is no breathing, beating of the heart, pulsation of the umbilical cord or unmistakable movement of voluntary muscle.
- In 2017 there were 63 stillbirths to mothers who were residents of Nova Scotia, which is a rate of 7.7 per 1,000 live births. The Canadian national rate for stillbirths in 2016 (the last reported year) was 7.9 per 1,000 live births.
- In 2017, there were 33 infant deaths (death occurring to a child under 1 year of age) in the province, for an infant mortality rate of 4.0 per 1,000 live births. Of these 33 infant deaths, 24 were neonatal deaths, occurring to infants under 1 month of age. The infant death rate in the past 5 years has ranged from 3.5 to 4.7. The Canadian national infant death rate for 2016 (the last reported year) was 4.5 per 1,000 live births. Nova Scotia has been consistently at or below the national infant death rate.
- The leading category of causes of infant death in Canada is ‘Certain Conditions Originating in the Perinatal Period,’ which includes conditions which have their origin in the perinatal period (before and during labour) even though death (or morbidity) occurs later. This is also the leading cause of infant death in Nova Scotia. There were 18 deaths in this category. For specific causes of death in this category, please see Table XVI.
- There were 5 infant deaths attributable to congenital malformations, deformations, or chromosomal abnormalities.
