

## ROMANIZATION OF KYRGYZ

### BGN/PCGN 1979 System

The BGN/PCGN system for Kyrgyz<sup>1</sup> Cyrillic was designed for use in romanizing names written in the Kyrgyz Cyrillic alphabet. The Kyrgyz Cyrillic alphabet contains three characters not present in the Russian alphabet: Ң , Ө, and Ү.

	Kyrgyz				Cyrillic Unicode	Romanization		Kyrgyz				Cyrillic Unicode	Romanization

<sup>1</sup> Both Kyrgyz and Kirghiz may frequently be seen as the language name; both these spellings are used in the ISO 639 Standard on the representation of names for languages.

## NOTES

1. The character sequence **h r** may be romanized **n·g** in order to differentiate that romanization from the digraph **ng**, which is used to render the character **H**.
2. The character **bi** may be romanized **r** (Unicode encoding 0069+0335) instead of **y**, if so desired.
3. An inventory of letter-diacritic combinations, with their Unicode encoding, in addition to the unmodified letters of the basic Roman script is:

All apostrophes appearing in romanization are U+2019

Ö (U+00D6)	ö (U+00F6)
Ü (U+00DC)	ü (U+00FC)

4. The Romanization column shows only lowercase forms but, when romanizing, uppercase and lowercase Roman letters as appropriate should be used.
