

Sequence Table

Column names are the sequence IDs.
Often times they are written as seq1,seq2,...,seqN or
ASV1,ASV2,...ASVN, where N is the number of
sequences present in the table.

	seq1	seq2	seq3	...	seqN
sample1					
sample2					
sample3					
...					
sampleM					

Row names are the sample names. These should be the same sample names that would be present in your mapping file.
