

NAME

git-lfs-pre-push – Git pre-push hook implementation

SYNOPSIS

git lfs pre-push *remote* [*remoteurl*]

DESCRIPTION

Responds to Git pre-hook events. It reads the range of commits from STDIN, in the following format:

```
<local-ref> SP <local-sha1> SP <remote-ref> SP <remote-sha1> \n
```

It also takes the remote name and URL as arguments.

SEE ALSO

[git-lfs-clean\(1\)](#), [git-lfs-push\(1\)](#).

Part of the [git-lfs\(1\)](#) suite.
