I have recently discovered Comet Dibiasky that is approximately 10-15km in size, and based on my orbital calculations is estimated to strike Earth in 6 months and 14 days

Education

I am a Teaching Assistant in the Astronomy Department and am passionate about playing a positive role in shaping the new generation of astronomers.

Michigan State University

PHD. CANDIDATE, ASTRONOMY

- My thesis focuses on using multi-wavelength observations of comets
- Teaching Assistant, Astronomy 101

Michigan, USA

2019–Present

Michigan State University

BSc, ASTRONOMY

- GPA 4.0

Michigan, USA

2015–2019

Research experience

Michigan State University

GRADUATE RESEARCHER

- My thesis focuses on using multi-wavelength observations of comets to better understand the risk of comets striking Earth
- I am involved in the analysis of comet orbital speed and size calculations to estimate their risk of approaching Earth

Michigan, USA

2019–Present

Michigan State University

UNDERGRADUATE RESEARCHER

- During my undergrad, I didn't discover any dangerous comets, but I did acquire very useful skills for undertaking orbital calculations

Michigan, USA

2015–2019

Industry experience

Location

POSITION TITLE

- Description 1 bullet point goes here
- Note that you can add a Description 2 bullet point by having the same information for all other fields
- Note that you can add a Description 3 bullet point by having the same information for all other fields

Institution

2010–2012

Leadership experience

TV INTERVIEW ON "THE DAILY RIP" ABOUT MY COMET DISCOVERY

- Invited for a TV interview on the popular TV show "The Daily Rip" hosted by Jack and Brie
- I appeared on the same segment as the news on Ariana Grande's and DJ Chello's breakup

Washington DC

2022
