

General Kinetics Inc.

H2O2 Training Seminar

Specifications

- Two day training class
- One day of class room information: History, properties, handling, safety
- One day of hands-on demonstrations and experiments
- Demonstrations of:
 - Catalysis
 - Material compatibility
 - Reactivity
 - Handling
 - Auto-ignition

Description

The H₂O₂ training seminar is designed to provide a summary of the most important engineering data required to work with propellant grade H₂O₂. The hands-on student experiments provides a unique opportunity for people to gain valuable experience working with H₂O₂ and learning important handling features and characteristics.
