Comments :

Arthritic disorders affect majority of the population varying in severity. Many of these disorders are self limiting conditions requiring minimal evaluation and symptomatic therapy. However several patients show persistent musculo-skeletal symptoms that requires laboratory testing to establish diagnosis and document the pathological process. The goal of these investigations is to formulate a differential diagnosis that leads to an accurate diagnosis and timely therapy. Arthritis can be of various types mainly Rheumatoid arthritis, Osteoarthritis, Autoimmune disorders, Gout & Psoriatic arthritis.
