- Tightly layered "unitized" construction offers long life and durability.
- Excellent for aggressive heavy duty blending and finishing with uniform results.
- Good replacement for rubber bonded wheels and small set-up wheels.

## UNITIZED WHEELS SELECTION GUIDE

Scotch-Brite™ Unitized Wheels are stacked, compressed layers of nonwoven web designed to bring abrasive to the part. Performance differences between unitized wheels can be attributed to mineral (aggressiveness) and density (hardness). The combination of these two characteristics and subtle variations determine if the wheel will cut more aggressively or will be more durable and less conformable.

## COOL UNDER PRESSURE.

Scotch-Brite™ Unitized Wheels are manufactured with compressed, nonwoven fiber construction and uniform grain distribution. These rugged, fast cutting wheels produce great results on all types of metal, composites and glass.

Smaller wheels are designed for use on die grinders and angle grinders.

### TECHNOLOGY

### 3M PRECISION-SHAPED GRAIN NONWOVEN TECHNOLOGY

Scotch-Brite™ Deburr and Finish PRO Unitized Wheels combine 3M Precision-Shaped Grain with our nonwoven technology, so you get a wheel that's soft enough to reduce defects but wears like iron without sacrificing the smooth feel and control you expect from Scotch-Brite™ Wheels.
