ORACLE®

Java™ Platform, Enterprise Edition 8 (Java EE 8) Web Profile Specification

Please post comments to javaee-spec@javaee.groups.io

Final Release - 7/31/17 Linda DeMichiel, Bill Shannon

Specification: JSR-366 Java Platform, Enterprise Edition 8 Web Profile ("Specification")
Version: 8.0
Status: Final Release

Specification Lead: Oracle America, Inc. ("Specification Lead")

Release: August 2017

LIMITED LICENSE GRANTS

1. License for Evaluation Purposes. Oracle hereby grants you a fully-paid, non-exclusive, non-transferable, worldwide, limited license (without the right to sublicense), under Oracle's applicable intellectual property rights to view, download, use and reproduce the Specification only for the purpose of internal evaluation. This includes (i) developing applications intended to run on an implementation of the Specification, provided that such applications do not themselves implement any portion(s) of the Specification, and (ii) discussing the Specification with any third party; and (iii) excerpting brief portions of the Specification in oral or written communications which discuss the Specification provided that such excerpts do not in the aggregate constitute a significant portion of the Specification.

2. License for the Distribution of Compliant Implementations. Oracle also grants you a perpetual, non-exclusive, non-transferable, worldwide, fully paid-up, royalty free, limited license (without the right to sublicense) under any applicable copyrights or, subject to the provisions of subsection 4 below, patent rights it may have covering the Specification to create and/or distribute an Independent Implementation of the Specification that: (a) fully implements the Specification including all its required interfaces and functionality; (b) does not modify, subset, superset or otherwise extend the Licensor Name Space, or include any public or protected packages, classes, Java interfaces, fields or methods within the Licensor Name Space other than those required/authorized by the Specification or Specifications being implemented; and (c) passes the Technology Compatibility Kit (including satisfying the requirements of the applicable TCK Users Guide) for such Specification ("Compliant Implementation"). In addition, the foregoing license is expressly conditioned on your not acting outside its scope. No license is granted hereunder for any other purpose (including, for example, modifying the Specification, other than to the extent of your fair use rights, or distributing the Specification to third parties). Also, no right, title, or interest in or to any trademarks, service marks, or trade names of Oracle or Oracle's licensors is granted hereunder. Java, and Java-related logos, marks and names are trademarks or registered trademarks of Oracle America, Inc. in the U.S. and other countries.

3. Pass-through Conditions. You need not include limitations (a)-(c) from the previous paragraph or any other particular "pass through" requirements in any license You grant concerning the use of your Independent Implementation or products derived from it. However, except with respect to Independent Implementations (and products derived from them) that satisfy limitations (a)-(c) from the previous paragraph, You may neither: (a) grant or otherwise pass through to your licensees any licenses under Oracle's applicable intellectual property rights; nor (b) authorize your licensees to make any claims concerning their implementation's compliance with the Specification in question.

4. Reciprocity Concerning Patent Licenses.

    a. With respect to any patent claims covered by the license granted under subparagraph 2 above that would be infringed by all technically feasible implementations of the Specification, such license is conditioned upon your offering on fair, reasonable and non-discriminatory terms, to any party seeking it from You, a perpetual, non-exclusive, non-transferable, worldwide license under Your patent rights which are or would be infringed by all technically feasible implementations of the Specification to develop, distribute and use a Compliant Implementation.

    b With respect to any patent claims owned by Oracle and covered by the license granted under subparagraph 2, whether or not their infringement can be avoided in a technically feasible manner when implementing the Specification, such license shall terminate with respect to such claims if You initiate a claim against Oracle that it has, in the course of performing its responsibilities as the Specification Lead, induced any other entity to infringe Your patent rights.

    c Also with respect to any patent claims owned by Oracle and covered by the license granted under subparagraph 2 above, where the infringement of such claims can be avoided in a technically feasible manner when implementing the Specification such license, with respect to such claims, shall terminate if You initiate a claim against Oracle that its making, having made, using, offering to sell, selling or importing a Compliant Implementation infringes Your patent rights.

5. Definitions. For the purposes of this Agreement: "Independent Implementation" shall mean an implementation of the Specification that neither derives from any of Oracle's source code or binary code materials nor, except with an appropriate and separate license from Oracle, includes any of Oracle's source code or binary code materials; "Licensor Name Space" shall mean the public class or interface declarations whose names begin with "java", "javax", "com.sun" and "com.oracle" or their equivalents in any subsequent naming convention adopted by Oracle through the Java Community Process, or any recognized successors or replacements thereof; and "Technology Compatibility Kit" or "TCK" shall mean the test suite and accompanying TCK User's Guide provided by Oracle which corresponds to the Specification and that was available either (i) from Oracle 120 days before the first release of Your Independent Implementation that allows its use for commercial purposes, or (ii) more recently than 120 days from such release but against which You elect to test Your implementation of the Specification.

This Agreement will terminate immediately without notice from Oracle if you breach the Agreement or act outside the scope of the licenses granted above.

DISCLAIMER OF WARRANTIES

THE SPECIFICATION IS PROVIDED "AS IS". ORACLE MAKES NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NON-INFRINGEMENT (INCLUDING AS A CONSEQUENCE OF ANY PRACTICE OR IMPLEMENTATION OF THE SPECIFICATION), OR THAT THE CONTENTS OF THE SPECIFICATION ARE SUITABLE FOR ANY PURPOSE. This document does not represent any commitment to release or implement any portion of the Specification in any product. In addition, the

Specification could include technical inaccuracies or typographical errors.

LIMITATION OF LIABILITY

TO THE EXTENT NOT PROHIBITED BY LAW, IN NO EVENT WILL ORACLE OR ITS
LICENSORS BE LIABLE FOR ANY DAMAGES, INCLUDING WITHOUT LIMITATION, LOST
REVENUE, PROFITS OR DATA, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL
OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF
LIABILITY, ARISING OUT OF OR RELATED IN ANY WAY TO YOUR HAVING, IMPLEMENTING
OR OTHERWISE USING THE SPECIFICATION, EVEN IF ORACLE AND/OR ITS LICENSORS
HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
You will indemnify, hold harmless, and defend Oracle and its licensors from any claims arising or
resulting from: (i) your use of the Specification; (ii) the use or distribution of your Java application, applet
and/or implementation; and/or (iii) any claims that later versions or releases of any Specification furnished
to you are incompatible with the Specification provided to you under this license.

RESTRICTED RIGHTS LEGEND

U.S. Government: If this Specification is being acquired by or on behalf of the U.S. Government or by a
U.S. Government prime contractor or subcontractor (at any tier), then the Government's rights in the
Software and accompanying documentation shall be only as set forth in this license; this is in accordance
with 48 C.F.R. 227.7201 through 227.7202-4 (for Department of Defense (DoD) acquisitions) and with 48
C.F.R. 2.101 and 12.212 (for non-DoD acquisitions).

REPORT

If you provide Oracle with any comments or suggestions concerning the Specification ("Feedback"), you
hereby: (i) agree that such Feedback is provided on a non-proprietary and non-confidential basis, and (ii)
grant Oracle a perpetual, non-exclusive, worldwide, fully paid-up, irrevocable license, with the right to
sublicense through multiple levels of sublicensees, to incorporate, disclose, and use without limitation the
Feedback for any purpose.

GENERAL TERMS

Any action related to this Agreement will be governed by California law and controlling U.S. federal law.
The U.N. Convention for the International Sale of Goods and the choice of law rules of any jurisdiction
will not apply.

The Specification is subject to U.S. export control laws and may be subject to export or import regulations
in other countries. Licensee agrees to comply strictly with all such laws and regulations and acknowledges
that it has the responsibility to obtain such licenses to export, re-export or import as may be required after
delivery to Licensee.

This Agreement is the parties' entire agreement relating to its subject matter. It supersedes all prior or
contemporaneous oral or written communications, proposals, conditions, representations and warranties
and prevails over any conflicting or additional terms of any quote, order, acknowledgment, or other

communication between the parties relating to its subject matter during the term of this Agreement. No modification to this Agreement will be binding, unless in writing and signed by an authorized representative of each party.

C H A P T E R **WP.1**

Introduction

This specification defines the Java EE Web Profile ("Web Profile"), a profile of the Java Platform, Enterprise Edition specifically targeted at web applications.

WP.1.1   Target and Rationale for the Web Profile

The Web Profile is targeted at developers of modern web applications.

With the term "modern" we intend to highlight the fact that the world of web applications has made much progress since the introduction of the first Servlet specification. Inevitably, the number of technologies used to create even simple web applications had grown by leaps and bounds. In fact, few web applications today are written directly to the servlet API: most applications rely on standard or third-party frameworks and libraries, often developed as open source, which in turn use the services of the servlet container.

Besides managing HTTP interactions, most web applications have significant requirements in the areas of transaction management, security and persistence. Such requirements can be readily addressed by technologies that have been part of the Java EE platform for quite some time, such as the Enterprise JavaBeans (EJB) 3.x technology and the Java Persistence API, but that are rarely supported by "plain" servlet containers. By incorporating many of these APIs, the Web Profile aims at raising the bar for what should be considered a basic stack for the development of web applications using the Java platform.

Targeting "modern" web applications then implies offering a reasonably complete stack, composed of standard APIs, and capable out-of-the-box of addressing the needs of a large class of web applications. Furthermore, this stack should be easy to grow, so as to address any remaining developer needs.

Against this drive towards completeness, one wishes to balance a desire to limit the footprint of web containers, both in physical and in conceptual terms. From the point of view of developers learning the Web Profile, it is more valuable to have a small, focused profile, with as little overlap between technologies as possible, rather than a more powerful but overly complex one, with redundant APIs.

In defining the Web Profile we strove to find a middle ground between these two sets of requirements.

In terms of completeness, the Web Profile offers a complete stack, with technologies addressing presentation and state management (JavaServer Faces, JavaServer Pages), core web container funtionality (Servlet), business logic (Enterprise JavaBeans Lite), transactions (Java Transaction API), persistence (Java Persistence API) and more.

As for simplicity, it leaves out many of the enterprise backend APIs that are part of the Java EE platform. It also relies on the pluggability features in the Servlet specification to allow applications to use libraries that extend the servlet container with minimal configuration overhead.

Finally, it is worth reminding that Web Profile products are allowed to ship with more technologies than the required ones. It is conceivable that products will offer a choice at installation time between different configurations, some richer in extensions, or even allow for complete customization beyond the required core ("à la carte" installation).

WP.1.2   Determining Applicable Requirements

Note – Profile definitions can be quite terse, amounting to little more than a list of required technologies and a (possibly empty) set of additional requirements, beyond those entailed by all the referenced specifications. Being the first profile of the Java EE 6 Platform to be defined, we expect the Web Profile specification to be used as a model for future profiles. It will also be seen as a starting point for understanding how the requirements defined in the Java EE Platform specification apply to a profile that subsets the platform itself, a significant innovation in this version of the platform. (The case of a profile that is a superset of the platform is much easier to picture.) To help with this process, this section attempts to shed light on how one should go from the definition of the Web Profile to figuring out

the exact set of requirements that apply to it, and consequently to any product that implements it.

As dictated by the general rules for Java EE profiles in the Platform specification, products that implement the Web Profile must honor:

1. all requirements of the Java EE Platform specification that apply to all profiles;

2. all requirements of this specification;

3. all requirements of the individual component specifications;

4. all requirements in the Java EE Platform specification that are conditional on the presence of a specific technology or combinations of technologies.

Let's look at some examples of requirements from each grouping.

For the first one, the Java EE Platform specification mandates support for the "java:" naming context in all profiles. Consequently, Web Profile products must support it. For a similar reason, all Web Profile 8 products must support the Java Platform, Standard Edition 8 API.

In the second category one can point out the requirement to support Java EE web application modules (.war files) (see Section WP.2.3, "Additional Requirements").

The third category is hopefully self-explanatory. For example, Web Profile products must implement the Servlet API, which in turn means they need to satisfy all the requirements listed in the Servlet specification.

The fourth category is the most complex. As a first example, since a Web Profile product is required to implement the Servlet technology, it must also follow all general requirements for Java EE web containers in the Platform specification. Additionally, it must follow all security requirements in the Platform specification that pertain to Java EE web containers, all interoperability requirements for such containers, etc. Furthermore, since a Web Profile product must implement the Java Transaction API (JTA), it must also satisfy all the Platform specification's transaction management-related requirements for web components, which indeed are conditional on the presence of Servlet and JTA .

As a negative example for the fourth category of requirements, consider the Java Message Service (JMS) technology. Since it is not a required component of the Web Profile, Web Profile products are not required to include an implementation of JMS, nor do they have to support other JMS-related requirements, like the ability to inject message destination references. On the other hand, a Web Profile product that included an implementation of JMS would

be required to honor all the JMS-related requirements in the Java EE Platform specification.

Particular care should be taken when determining applicable requirements based on the presence of EJB Lite in the Web Profile. As described in the EJB specification, EJB Lite is a subset of the EJB API. When examining an EJB-related requirement in the Java EE Platform spec, one must first of all determine which API classes, component types and EJB container services are mentioned in the requirement itself. Only if all of them fall inside the EJB Lite subset that requirement is considered applicable to Web Profile products.

For example, since EJB Lite does not include any remote functionality, the EJB annotation may not be used to inject a remote reference, something that should be kept in mind when evaluating the requirements in the Platform specification section "Enterprise JavaBeans References".

WP.1.3   Acknowledgements for Version 6

Version 6 of this specification was created under the Java Community Process as JSR-316. The spec leads for the JSR-316 Expert Group were Bill Shannon (Sun Microsystems, Inc.) and Roberto Chinnici (Sun Microsystems, Inc.). The expert group included the following members: Florent Benoit (Inria), Adam Bien (Individual), David Blevins (Individual), Bill Burke (Red Hat Middleware LLC), Larry Cable (BEA Systems), Bongjae Chan (Tmax Soft, Inc.), Rejeev Divakaran (Individual), Francois Exertier (Inria), Jeff Genender (Individual), Antonio Goncalves (Individual), Jason Greene (Red Hat Middleware LLC), Gang Huang (Peking University), Rod Johnson (SpringSource), Werner Keil (Individual), Michael Keith (Oracle), Wonseok Kim (Tmax Soft, Inc.), Jim Knutson (IBM), Elika S. Kohen (Individual), Peter Kristiansson (Ericsson AB), Changshin Lee (NCsoft Corporation), Felipe Leme (Individual), Ming Li (TongTech Ltd.), Vladimir Pavlov (SAP AG), Dhanji R. Prasanna (Google), Reza Rahman (Individual), Rajiv Shivane (Pramati Technologies), Hani Suleiman (Individual).

WP.1.4   Acknowledgements for Version 7

Version 7 of this specification was created under the Java Community Process as JSR-342. The Expert Group work for this specification was conducted by means of the http://javaee-spec.java.net project in order to provide transparency to the

CHAPTER WP.2

Web Profile Definition

This chapter defines the contents of the Java™ Platform, Enterprise Edition 8 (Java EE™ 8) Web Profile.

WP.2.1   Required Components

The following technologies are required components of the Web Profile:

- Servlet 4.0
- JavaServer Pages (JSP) 2.3
- Expression Language (EL) 3.0
- Debugging Support for Other Languages (JSR-45) 1.0
- Standard Tag Library for JavaServer Pages (JSTL) 1.2
- JavaServer Faces (JSF) 2.3
- Java API for RESTful Web Services (JAX-RS) 2.1
- Java API for WebSocket (WebSocket) 1.1
- Java API for JSON Processing (JSON-P) 1.1
- Java API for JSON Binding (JSON-B) 1.0
- Common Annotations for the Java Platform (JSR-250) 1.3
- Enterprise JavaBeans (EJB) 3.2 Lite
- Java Transaction API (JTA) 1.2
- Java Persistence API (JPA) 2.2
- Bean Validation 2.0

- Managed Beans 1.0
- Interceptors 1.2
- Contexts and Dependency Injection for the Java EE Platform 2.0
- Dependency Injection for Java 1.0
- Java EE Security API 1.0
- Java Authentication Service Provider Interface for Containers (JASPIC) 1.1 Servlet Container Profile

WP.2.2   Optional Components

There are no optional components in the Web Profile.

    Web Profile products may support some of the technologies present in the full Java EE Platform and not already listed in Section WP.2.1, "Required Components", consistently with their compatibility requirements.

WP.2.3   Additional Requirements

    Web Profile products must support the deployment of Java EE web application modules (`.war` files). No other modules types are required to be supported.

Revision History

WP.A.1 Changes in Early Draft

WP.A.1.1 Additional Requirements

- Java EE 8 Web Profile requires Java SE 8.
- Updated to reflect versions of Java EE 8 technologies.
- Added JSON-B as required component.
- Added MVC as required component.

WP.A.1.2 Removed Requirements

- None

WP.A.1.3 Editorial Changes

- Updated Related Documents.

WP.A.2 Changes in Early Draft 2

WP.A.2.1 Additional Requirements

- None

WP.A.2.2   Removed Requirements

- Removed MVC 1.0 from Section WP.2.1, "Required Components."

WP.A.2.3   Editorial Changes

- Changed version of Bean Validation from 1.1 to 2.0.

WP.A.3   Changes in Public Review Draft

WP.A.3.1   Additional Requirements

- Added Java EE Security API 1.0 and JASPIC 1.1 as required components.

WP.A.3.2   Removed Requirements

- None

WP.A.3.3   Editorial Changes

- Corrected version of WebSocket to 1.1.
- Added acknowledgements.
- Updated "Related Documents."

WP.A.4   Changes in Proposed Final Draft

WP.A.4.1   Editorial Changes

- Added reference to `https:javaee.github.io/javaee-spec` project.
- Updated "Related Documents."

Related Documents

This specification refers to the following documents. The terms used to refer to the documents in this specification are included in parentheses.

Java™ Platform, Enterprise Edition Specification Version 8. Available at `http://jcp.org/en/jsr/detail?id=366`.

Java™ Platform, Standard Edition, v8 API Specification (Java SE specification). Available at `http://docs.oracle.com/javase/8/docs/`.
