

NAVY TRAINING PLAN

FOR THE

AGM-84E STANDOFF LAND ATTACK MISSILE

(SLAM)

A-50-8813B/A

MAY 1996

Enclosure (1)

SLAM (AGM-84E) MISSILE SYSTEM

EXECUTIVE SUMMARY

The AGM (Air-to-Ground Missile)-84E Standoff Land Attack Missile (SLAM) is a carrier or land-based non-nuclear tactical weapon designed to perform day, night, or marginal weather surgical strikes. SLAM was designed with sufficient standoff range to ensure high survivability of launch aircraft in attacks against surface targets. To support rapid deployment and maintain low development costs, selected components from Harpoon, Maverick, and the Walleye Missiles were integrated into SLAM. This integration of existing weapon system components minimized SLAM design changes and allowed for interface with existing Harpoon aircraft Fire Control Systems (FCS) in U.S. Navy F/A-18 aircraft.

There are no dedicated operators required for the SLAM system. SLAM will be operated by aircrew incidental to their normal duties. Manpower requirements are developed based on the host weapon system aircrew seat factor ratio. The supporting command's existing manpower levels are adequate to support the SLAM system and no additional manpower requirements are identified.

AGM-84E STANDOFF LAND ATTACK MISSILE

INTRODUCTION

This Navy Training Plan (NTP) was developed in accordance with OPNAVINST 1500.8M to identify new changes deriving from SLAM (Standoff Land Attack Missile) program schedule changes and training requirements. Reference is also made to the SLAM Preplanned Product Improvement (P3I) also known as SLAM Expanded Response (ER). The scope and detail of SLAM-ER data is introductory and for program planning purposes only.

LIST OF ACRONYMS

ACNO	Assistant Chief of Naval Operations
AO	Aviation Ordnanceman
AUR	All-Up-Round
BIT	Built in Test
BUPERS	Bureau of Naval Personnel
CATM	Captive Air Training Missile
CBT	Computer-Based Training
CCMM	Course Curriculum Model Manager
CINCLANTFLT	Commander-in-Chief, United States Atlantic Fleet
CINCPACFLT	Commander-in-Chief, United States Pacific Fleet
CNO	Chief of Naval Operations
CNET	Chief of Naval Education and Training
CV	Aircraft Carrier
CVN	Aircraft Carrier, Nuclear
DATM	Dummy Air Training Missile
D-Level	Depot Level
DMSO	Director Major Staff Office
DOP	Designated Overhaul Point
EOD	Explosive Ordnance Disposal
FCS	Fire Control System

WC	Work Center
WDL	Weapon Data Link
WPN	Weapon
WPNSTA	Weapon Station
WRA	Weapons Replaceable Assembly

PART I - TECHNICAL PROGRAM DATA

NTP Number: A-50-8813B/A

Date: May 1996

A. TITLE-NOMENCLATURE-PROGRAM

1. **Title.** Standoff Land Attack Missile (SLAM)
2. **Nomenclature-Acronym.** AGM-84E/SLAM
3. **Program Element.** 63306N

B. SECURITY CLASSIFICATION

1. **System Capabilities** Confidential
2. **System Description** Unclassified
3. **Selected Components** Secret
4. **Navy Training Plan** Unclassified

C. NTP PRINCIPALS

1. Assistant Chief of Naval Operations/Director Major
Staff Office (ADCNO/DMSO) Program Sponsor CNO (N880C8)
2. ACNO/DMSO Resource Sponsor CNO (N880C8)
3. Principal Development Activity (PDA) NAVAIRSYSCOM (PMA258)
4. Training Agents (TA) CNET (T25)
CINCPACFLT
CINCLANTFLT
5. Training Support Agent (TSA) NAVAIRSYSCOM (PMA205-5B)
6. Manpower and Personnel Mission Sponsor CNO (N1)
7. Bureau of Naval Personal (BUPERS) BUPERS (PERS-4, PERS-40)

D. OPERATIONAL USES

1. **Purpose.** SLAM is an air-launched, non-nuclear, tactical guided missile capable of attacking fixed targets from a standoff range either in daylight or darkness and under marginal weather conditions. The SLAM design integrates components from Harpoon, Maverick, and Walleye missiles. This integration of existing weapon systems will minimize SLAM design changes and allow for interface with existing Fire Control Systems (FCS) in the F/A-18 aircraft.

2. Foreign Military Sales (FMS) and Other Source Procurement. The SLAM weapon system has been approved as a candidate for FMS. Additional information on SLAM FMS can be obtained from PMA258.

E. TECHNICAL AND OPERATIONAL EVALUATION (TECHEVAL/OPEVAL).

TECHEVAL for baseline SLAM was conducted at the Naval Air Warfare Center, Weapons Division, Point Mugu, (NAWCWD), CA and was completed in December 1989. OPEVAL was conducted at NAWCWD, China Lake; White Sands Missile Range, NM, and the NAWCWD by OPTEVFOR using Air Test and Evaluation Squadron Nine (VX-9) personnel and assets. SLAM was approved for full Fleet introduction on 20 May 1991.

F. EQUIPMENT/SYSTEM/SUBSYSTEM REPLACED. N/A

G. DESCRIPTION

1. Functional Description and Major Components. The AGM-84E SLAM is a carrier or land-based non-nuclear tactical standoff weapon system designed to perform day, night, and under marginal weather surgical strikes. Using preplanned mission profiles, the missile flies autonomously to the target area using Global Positioning System (GPS) aided inertial navigation. Near the target, the Imaging Infrared (IIR) seeker and weapon data link are activated allowing aim point refinement via Man-In-The-Loop (MITL) control of the IIR seeker from the launch aircraft or a cooperative aircraft with AN/AWW-13 data link pod.

2. Physical Description. The AGM-84E/SLAM is a derivative of the Harpoon missile. The SLAM uses sections from the Maverick and Walleye Missile Systems as described below. The SLAM missile is longer and heavier than its predecessor and can be subdivided into four major sections.

a. Guidance Section. Consists of the following functional subsystems:

(1) IIR Seeker Section. The production AGM-65F Maverick IIR Seeker is used with minor modifications. The seeker includes its own processor and tracking algorithm software for autonomous tracking of the designated target aim point. During flight, the seeker video is transmitted to the control aircraft where the operator views the image, recognizes the target, and selects a specific target aimpoint.

(2) Global Positioning System/Receiver Processing Unit (GPS/RPU). The GPS receives positioning data from satellites, processes the data, and provides three-dimensional position information to the mid course guidance unit to improve mid course guidance accuracy. The system used on SLAM is a derivation of production units used in other Department of Defense (DOD) systems. It includes a receiver, a signal processor, a navigation processor to perform SLAM guidance system navigation, Kalman filter functions, and a MK 82 interface.

(3) Data Link Receiver. The Walleye Phase II Command Receiver and video transmitter missile equipment are used in the SLAM with minor modifications. This assembly provides a radio frequency (RF) link between the missile and the control aircraft. The missile's seeker video is transmitted via the data link to the aircraft where the operator views the target image. The operator in turn transmits commands to the missile via the Weapon Data Link (WDL).

(4) Guidance Interface Unit (GIU). The GIU provides GPS data to the Midcourse Guidance Unit (MGU). The GIU permits the interface of the MGU with the Seeker, WDL, and GPS/RPU to make the SLAM guidance section function. The GIU demultiplexes signals from the MGU; conditions signals for proper interface between elements of the guidance section; buffers and scales analog signals; provides power to the seeker and data link; and switches the MGU serial input/output between the command and launch subsystem and GPS under MGU control. The GIU also routes the seeker video to the WDL and annotates the video under MGU control.

(5) Radar Altimeter. The radar altimeter installed in the SLAM is identical to Harpoon, without modification. It is also known as the Harpoon Missile Radar Altimeter (HMRA), and it provides altitude information to the computer in the MGU in order to maintain a known altitude.

(6) Midcourse Guidance Unit (MGU). The Harpoon MGU consists of a three-axis attitude reference assembly and a general purpose digital computer. This unit is used for the SLAM with software and hardware modifications to the computer processor and memory. The MGU, in conjunction with the GPS, provides precise midcourse navigation accuracy during flight. The MGU interfaces with the external Data Transfer Module which inputs preplanned mission data prior to flight.

(7) Power Converter. An AC to DC power converter is provided to utilize available aircraft power for SLAM prelaunch operations requiring DC power. The power converter is attached to the guidance body shell, and heat generated within the unit is conducted to the missile's skin for dissipation. The power supply is disconnected automatically on battery activation.

b. Air-launch kit. The air-launch kit consists of twelve subassemblies with wings and fins. The kit is identical as that used on the air-launched Harpoon Missile. The air-launch kit, when installed, configures the basic missile body into an air launchable missile.

c. Warhead. The warhead is a blast/fragmentation high explosive unitary warhead used in the Harpoon missile. The fuze was modified to allow selection of instantaneous or delayed detonation.

d. Sustainer. The sustainer section is a modified Harpoon sustainer consisting of a Teledyne CAE-J402 turbojet engine, cast aluminum flush inlet, a sealed fuel tank with JP-10 fuel, a silver-zinc battery, and wing roots for the air launch kit.

e. Control. The control section contains four electro-mechanical actuators which provide fin movement for flight path control. A Walleye Data Link Antenna is located under this section, but it is mounted on the sustainer section.

f. Dimensions and Weight

Length 175.2 inches
Diameter..... 13.5 inches
Wing span 36.0 inches
Weight..... 1,366.0 pounds

3. Missile Initialization System. The missile initialization system is comprised of the Missile Initialization Unit (MIU) and appropriate software. The MIU consists of the missile prelaunch data memory loader and missile prelaunch data computer.

a. Missile Prelaunch Data Memory Loader. The memory loader (MU-956/T) is used to load air-strike mission planning data into a SLAM prior to a launching aircraft's departure from an aircraft carrier. The memory loader provides the necessary controls, displays, and storage to enter 64 sets of mission data, two sets of GPS cryptographic keys, and one set of GPS almanac data. The memory loader cable set interfaces the memory loader with the prelaunch data computer, printer, and applicable software in the Aircraft Carrier Intelligence Center (CVIC). It also interfaces the memory loader with the aircraft support equipment power connector and missile umbilical during the memory transfer operation.

b. Missile Prelaunch Data Computer. The data computer (CP-1876/G) is a modified personal computer (Zenith ZWX-248-62). It performs five basic functions: interfaces with mission planning to format mission planning data (mission data GPS cryptographic keys and GPS almanac data) into missile prelaunch data; interfaces with the memory loader to transfer missile prelaunch data to the memory loader; interfaces with the memory loader to test and troubleshoot the memory loader; interfaces with the GPS almanac data collection system on a RS-422 circuit card interface; and provides a printed hard copy of data transmitted to the memory loader.

Note: The manual method of mission planning including the Zenith ZWX-248-62 is due to be replaced as the SLAM Weapon System becomes fully integrated with Tactical Aircraft Mission Planning System (TAMPS) 6.0 (see section I.H.3).

c. Computer Cable. The computer cable (RS-232) set interfaces the computer with the memory loader.

4. Container, Shipping and Storage (MK-724 Mod-1)

a. Physical Description. The MK-724 Mod-1 is made of aluminum.

MK-724 Mod-1 Dimensions

Length 186.0 in.
Width 37.2 in.
Height 29.82 in.
Weight (EMPTY)..... 900 lbs.

5. Exercise Training Missile (ATM-84E-I)

a. Functional Description. Exercise Training Missiles are identical to the tactical missiles with the exception that the warhead section is replaced with an exercise section which provides telemetry data of training or test flights. The exercise section also receives and executes flight termination command signals, and it is used for missile identification and tracking.

b. Physical Description. The exercise section replaces the warhead for flight test and fleet training exercise firings. Weight and dimensions remain the same.

6. System Introduction. SLAM was approved for full rate production on 28 June 1991. The interim material support date and the Navy support date for organizational and intermediate level maintenance for the All-Up-Round (AUR) occurred in the 2nd quarter, FY 1994.

7. Significant Interfaces and Impacts. The SLAM is designed to interface with the existing wiring in the A-6E, and F/A-18 aircraft. Electrical and data interfaces with the AN/AWW-13 data link pods are required to provide MITL terminal guidance control.

8. Training Devices.

a. Captive Air Training Missile (CATM). CATMs (CATM-84E-1A) simulate the SLAM tactical missile for full mission rehearsal training. The SLAM CATM is an altered configuration of the production missile and is suitable for use by training elements in both shore and shipboard environments. The SLAM CATM is used to train the launch aircrew through missile release and the control aircrew (MITL) for terminal guidance. The SLAM CATM can be carried on all SLAM air platforms. SLAM CATMs will be deployed at schoolhouses with the remainder divided into two rotating pools and placed under the cognizance of the TAs - CINCLANTFLT and CINCPACFLT, who will be responsible for specific CATM deployment within their area of responsibility. Forward deployed unit requirements will be filled by the appropriate CINC.

b. Dummy Air Training Missile (DATM-84E-I). The Dummy Air Training Missile (DATM) is an inert shape that replicates the external appearance, form, fit, weight, and center of gravity of the AUR. The SLAM DATM interfaces mechanically with SLAM capable aircraft. DATMs are used in the classroom and Fleet training exercises to train and qualify load crews in uploading/downloading and handling the missile. Breakout, assembly, strike up/strike down, upload/download, stowage, and Organizational Level (O-Level) maintenance for the SLAM DATM are identical to the procedures for a tactical missile.

c. Enhanced DATM. The Enhanced SLAM DATM is created by installing the Mission Loading Interface Training Simulator (MLITS) in the control section of the standard SLAM DATM to simulate the mission data loading capabilities of the tactical SLAM. The Enhanced DATM interfaces with the aircraft mechanically and electrically. The Enhanced DATM enables O-Level personnel to train in SLAM mission loading and missile initialization procedures. MLITS are available in limited quantities from Naval Surface Warfare Center, Indian Head.

d. Practical Explosive Ordnance Disposal System Trainer (PEST). The PEST simulates all explosive components. PEST is an inert training shape that replicates the external appearance and Explosive Ordnance Disposal (EOD) related internal features of the SLAM. For training realism, warhead and other motor components involved in the Rendering Safe Procedures (RSP) are replicated with inert or expended tactical or mechanically simulated components.

H. NEW FEATURES, CONFIGURATION, OR MATERIAL

1. SLAM Mission Planning Module (MPM) for Tactical Aircraft Mission Planning Module (TAMPS). The SLAM MPM for the TAMPS 6.0 is being developed by McDonnell Douglas Aerospace. Fleet release for operational use is expected in the 4th quarter FY96. By utilizing the TAMPS, SLAM mission planning will be completely computer based. The planner will not have to use separate Joint Operations Graphic (JOG) charts etc. Everything the planner needs will be on the TAMPS computer (DCT-2) ie. charts, Digital Terrain Evaluation Data, GPS capability. This will greatly reduce the amount of time needed for SLAM mission planning. Planning a complex mission can take 4-6 hours. With TAMPS that time will be reduced to less than 30 minutes, including mission validation.

2. Aircrew Interactive Courseware (ICW). The SLAM Aircrew Curricula is under revision currently to standardize, automate, and to incorporate the latest lessons learned. The SLAM ICW is being developed under the direction of SFWS (LANT and PAC) for the F/A-18 community. The ICW is being developed to support comprehensive schoolhouse training (SFWS) and refresher training (squadron). The new courseware will be hosted on the Strike Fighter Training System (SFTS). TOPGUN is coordinating the SFTS program.

I. CONCEPTS

1. Maintenance Concept. The SLAM System maintenance concept conforms with the requirements of OPNAVINST 8600.2 (series), Naval Airborne Weapons Maintenance Program (NAWMP), with a slight modification. The maintenance concept allocates maintenance functions to the organizational (O-Level), intermediate (I-Level), and depot (D-Level) levels of maintenance. The Weapons Station (WPNSTA) accomplishes I-Level (AUR Depot) maintenance. D-level maintenance is performed at the Designated Overhaul Point (DOP). CATM maintenance concept follows the identical system in place to support the tactical AGM-84E. However, the DATM maintenance concept is "O to D". The Depot/DOP for the DATM is NSWC/Indian Head Division.

a. O-Level Maintenance. O-Level maintenance consists of those functions normally performed by an operating unit on a day-to-day basis in support of its own operation. Organizational maintenance is usually accomplished by weapons personnel assigned to a maintenance department to support the missions and task of the performing activity. O-Level maintenance may be accomplished by the next higher (Intermediate) level of maintenance. O-level maintenance deals with the missile only as an AUR and consists of visual inspection, upload/download, Built in Test (BIT), replacement of wings/fins/lanyards/umbilicals, and corrosion control.

b. I-level (AUR Depot). I-level (AUR Depot) testing and maintenance will be performed on a missile when it reaches its assigned Maintenance Due Date (MDD), fails BIT, or is subjected to excessive handling damage. I-level maintenance is performed at the WPNSTA and consists of missile assembly/disassembly, AUR testing, fault isolating to the section level. The I-level also conducts retest and recertification and prepares and ships sections to the Designated Overhaul Point (DOP).

c. D-Level Maintenance. D-level maintenance will be performed by the manufacturer, McDonnell Douglas Aerospace and its subcontractors (except for Government Furnished Equipment (GFE) on those parts determined to be beyond the capabilities of "O" or "I" level maintenance). Sections are repaired by fault isolating to a discrepant Weapons Replaceable Assembly (WRA), removing and replacing the WRA, and retesting to verify operational performance capability. Discrepant WRAs are repaired by fault isolating to a faulty Shop Repairable Assembly (SRA), removing and replacing the SRA, and retesting. Discrepant SRAs will be repaired by fault isolating to the piece part or sub-SRA, removing and replacing the defective item, and retesting. The Depot/DOP for the DATM is NSWC/Indian Head Division. Container repair will be performed by Weapons Station (WPNSTA) Yorktown, VA. IIR Seeker repair will be performed at Hill Air Force Base, Utah, transition to Hughes Missile Systems Co. is anticipated.

d. Sources of Technical Assistance. N/A.

e. Interim Maintenance. N/A.

2. Operational Concept. The SLAM is designed to be deployed with tactical units of the Navy. It is intended for use by the F/A-18 aircraft. The SLAM system is used to attack and neutralize fixed, high value, above ground targets and ships located in port. The missile may be launched at significant standoff ranges with a high degree of accuracy.

3. Manning Concept. The introduction of the SLAM into the Navy inventory has not altered manning requirements. Manning requirements for organizational, intermediate, and depot maintenance activities are generated based on the total workload requirements for a specific Work Center (WC), and the skills needed to perform maintenance on the system supported by that work center's personnel.

J. LOGISTICS

1. **Manufacturer.** McDonnell Douglas Aerospace.

2. **Contract Number.** N00019-94-C-0100.

3. **Integrated Logistics Support Plan (ILSP) Development.** AIR 418 ILSP MS-006.

4. **Technical Data Plan.** The Naval Technical Services Facility is assigned responsibility for ensuring compliance with USN standards. Acquisition and management of Technical Manuals is the responsibility of Commander Naval Air Systems Command (COMNAVAIRSYSCOM). Technical Manual Contract Requirement specify exact requirements in detail and cites preparation and delivery. Applicable Technical Manuals to be affected are listed in Part IVB.4.

5. **Special Test Sets, Special Tools, Special Test Equipment, and General Purpose Test Equipment**

a. **O-Level Maintenance.** Harpoon test equipment currently in use at the O-Level will test the aircraft circuits prior to missile loading.

b. **I-Level Maintenance.** Test equipment currently in use at WPNSTA, Yorktown, VA/ NAWMU/CV/CVN/NAS is used to support the SLAM Missile.

c. **D-Level Maintenance.** All depot maintenance for SLAM will be performed at the manufacturer's facility and NSWC/IHD using existing test equipment.

6. **Supply Support.** SLAM utilizes Navy Ships Part Control Center for O-Level and I-Level supply support and inventory control management. D-Level spares and components are provided and managed by COMNAVAIRSYSCOM.

7. **Contractor Engineering and Technical Services (CETS).**

K. SCHEDULES

1. **Schedule of Events.** The schedule of events is as follows:

a. **Installation Schedule.** Complete.

b. **Ready for Operational Use (RFOU) Schedule.** Complete.

c. **Training Device (TD) and Technical Training Equipment (TTE) Delivery Schedule**

(1) **CATMs:** Original XATMs are being purged from inventory and converted to fully inert CATMs with v2.42 software. All remaining CATMs are converted or in process to incorporate the latest SLAM software v2.42. The CATMs upon completion of the

software retrofit are being made available to the TYCOMs for their rotatable pool and or distribution. Decommissioned A-6 assets will be relocated by direction of the TAs - CINCPACFLT and CINCLANTFLT.

(2) **DATMs:** Complete. Mission Loading Interface Training Simulators (MLITS) can be requisitioned from NSWC/IHD (Code 6540C) to enhance the DATM-84E-1 (see section I.G.8.c).

(3) **AIRCREW ICW:** PMA205 will deliver Phase I (Core SLAM Curricula) to the SFWS in the 3rd quarter FY96. Phase II will include a freeplay module and will be delivered 4th quarter FY96.

L. MANPOWER REQUIREMENTS. Manpower requirements for F/A-18 squadrons or Weapon Stations were not affected as a result of the SLAM system introduction.

1. Equipment, Subsystems, and Systems. N/A

2. Aircraft Equipment, Systems, and Subsystems. Enlisted manpower requirements associated with O-Level and I-Level maintenance are within the capability of current Navy Enlisted Classifications (NECs). No additional personnel are required to support SLAM.

a. Estimated Maintenance Man-Hours. N/A

b. Proposed Utilization. Classified.

c. Recommended Quantitative/Qualitative Manpower Requirements

(1) **Manpower Requirements Fleet Activities.** Manning for Navy squadrons is based on the total assigned workload for each work center and focuses on loading/downloading capabilities. Ordnance support in the Armament/Weapons Branch (WC 230) is provided by Aviation Ordnancemen (AO). Manpower requirements in WC 230 are based on maintaining specified weapon loading capabilities for the aircraft.

(2) **Manpower Requirements Fleet Readiness Squadron (FRS).** Manning is based on the total assigned workload. No changes to current FRS workload in WC 230 resulted from introduction of SLAM, therefore current manning, course length and facilities will not be impacted.

(3) **Intermediate Maintenance (CV/CVN).** Manning of the Weapons Department aboard CV/CVN is based on total assigned workload. SLAM does not impact overall workload in the missile division (G-3 Division) at these activities. No change in existing manning requirements is required.

(4) **Intermediate Maintenance (WPNSTA/NAWMU).** The WPNSTA's and NAWMU are manned by civilian technicians and Navy Ordnance personnel based

on total assigned workload. Manning requirements for NASs are determined with the same method. Introduction of SLAM does not impact existing manning requirements.

M. TRAINING CONCEPT

1. Training related to the SLAM system is available through formal training courses, unit training fleet exercises, and operations. Training for squadron operating personnel will also be contained in respective aircraft NTP's. Initial training for the SLAM has been completed therefore initial training is listed for informational purposes only. Follow-on training for the SLAM is in place.

a. Initial Training. Initial training provided by the contractor for the SLAM Missile System, consisted of operator, O-Level, I-Level, and D-Level maintenance course and Automatic Test Equipment operator course for weapons station personnel. Initial training was also provided for Naval Explosive Ordnance Disposal School (NAVSCOLEOD) instructors. Initial training was provided directly to units deploying the SLAM for Operation Desert Shield, then it was provided to TAs at the SFWS and NAMTRAGRU.

b. Follow-On Training. Training courses for SLAM are in place for Operator, O-Level, I-Level, and D-Level maintenance. The SLAM training will be integrated into courses contained in existing training tracks. Aircrew training for SLAM is provided at the SFWS ATLANTIC (SFWSLANT) and SFWS PACIFIC (SFWS PAC). Maintenance training for AOs was provided through the Naval Air Maintenance Training Group Detachments. EOD training is provided by NAVSCOLEOD (See Figure 1).

SLAM Aircrew Training

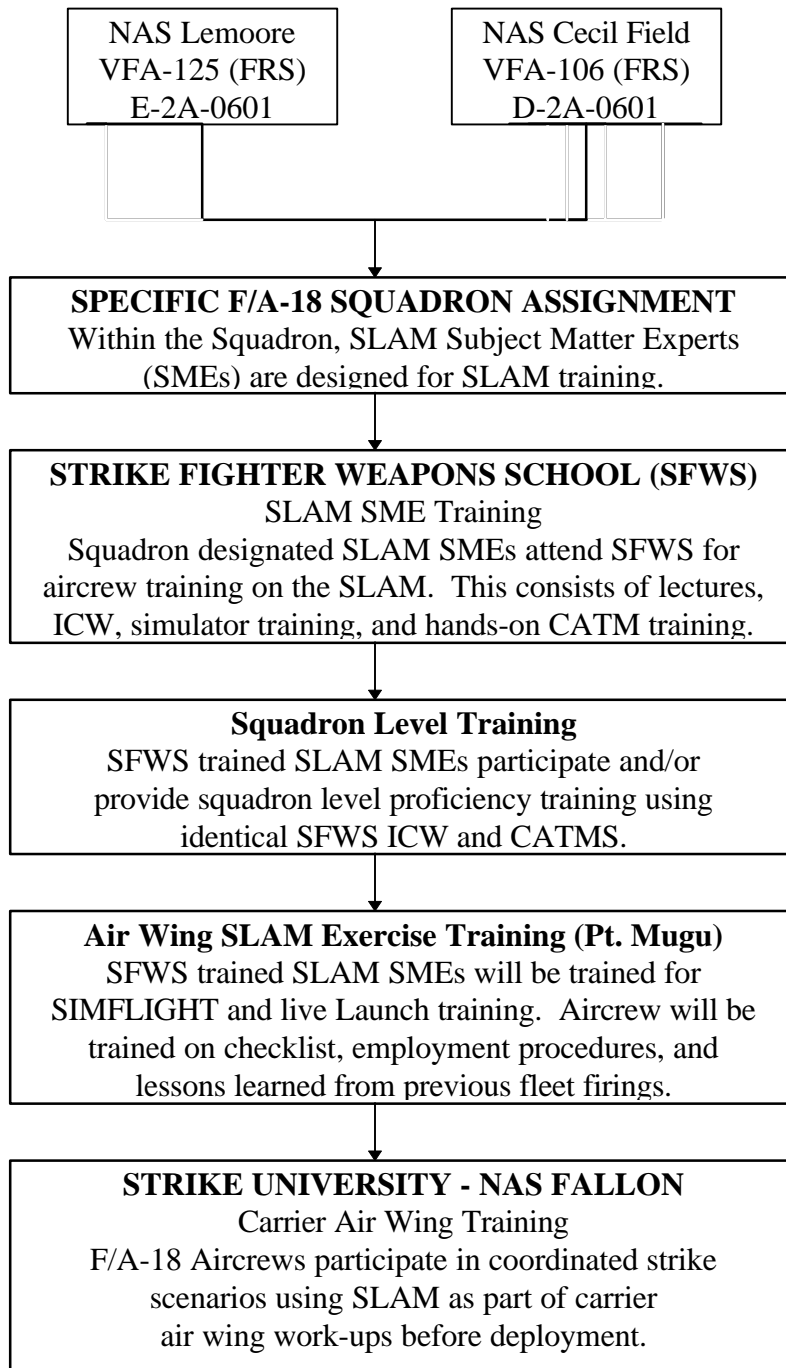

Figure 1. SLAM Aircrew Training

Once deployed to all squadrons, the Strike Fighter Training System (SFTS) will enhance the distribution and availability of the new SLAM ICW module for follow-on training. Squadron SLAM subject matter experts will be able to provide squadron level training or any squadron aircrew member will have the ability to use the SFTS system for refresher training in order to keep skills from deteriorating.

Marine Corps squadrons that are assigned to support Navy carrier air wings and who require SLAM training will be trained along with Navy squadrons at the TYCOM's training agent, SFWS. The SLAM ICW module being developed for the SFTS may be made available to applicable Marine Corps squadrons. Marine Corps squadrons requiring maintenance training will utilize Navy Landing Schools (SFWSs).

SLAM/ER training concept will be developed using baseline SLAM and difference course source data. The SLAM/ER NTP will outline its specific training concepts and differences. The SLAM follow-on courses that are addressed are listed in the following section.

(1) Operator - FRS courses are listed for reference only:

F/A-18 Fleet Replacement Pilot Category 1

Course number D-2A-0601
 Course length 166 days
 RFT date Currently available
 Location VFA-106, NAS Cecil Field
 Source rating None
 Skill identifier None
 TD/TTE See Part IV
 Prerequisites Designated Naval Aviator,
 Secret clearance, Selected for
 F/A-18 training

F/A-18 Fleet Replacement Pilot Category 2A

Course number D-2A-0602
 Course length 166 days
 RFT date Currently available
 Location VFA-106, NAS Cecil Field
 Source rating None
 Skill identifier None
 TD/TTE See Part IV
 Prerequisites F/A-18 or other
 type aircraft fleet experience

F/A-18 Fleet Replacement Pilot Category 3A

Course number D-2A-0604
Course length 110 days
RFT date Currently available
Location VFA-106, NAS Cecil Field
Source rating None
Skill identifier None
TD/TTE See Part IV
Prerequisites Previous F/A-18 or other
type aircraft fleet experience

F/A-18 Fleet Replacement Pilot Category 4

Course number D-2A-0606
Course length 26 days
RFT date Currently available
Location VFA-106, NAS Cecil Field
Source rating None
Skill identifier None
TD/TTE See Part IV
Prerequisites Previous F/A-18 or other
type aircraft fleet experience

F/A-18 Fleet Replacement Pilot Category 1

Course number E-2A-0601
Course length 175 days
RFT date Currently available
Location VFA-125, NAS Lemoore
Source rating None
Skill identifier None
TD/TTE See Part IV
Prerequisites Designated Naval jet pilot,
Possess a Final Secret
security clearance, Designated
Service Group I Naval Aviator,
SERE Training

F/A-18 Fleet Replacement Pilot Category 2A

Course number E-2A-0602
Course length 155 days
RFT date Currently available
Location VFA-125, NAS Lemoore
Source rating None

Skill identifier None
TD/TTE See Part IV
Prerequisites Designated Naval jet pilot,
Possess a Final Secret security
clearance, Designated Service Group I
Naval Aviator, SERE Training

F/A-18 Fleet Replacement Pilot Category 2F

Course number E-2A-0603
Course length 156 days
RFT date Currently available
Location VFA-125, NAS Lemoore
Source rating None
Skill identifier None
TD/TTE See Part IV
Prerequisites Designated Naval jet pilot,
Possess a Final Secret
security clearance, Designated
Service Group I Naval Aviator,
SERE Training

F/A-18 Fleet Replacement Pilot Category 3A

Course number E-2A-0604
Course length 105 days
RFT date Currently available
Location VFA-125, NAS Lemoore
Source rating None
Skill identifier None
TD/TTE See Part IV
Prerequisites Designated Naval jet pilot,
Possess a Final Secret
security clearance, Designated
Service Group I Naval Aviator,
SERE Training

F/A-18 Fleet Replacement Pilot Category 2H

Course number E-2A-0605
Course length 112 days
RFT date Currently available
Location VFA-125, NAS Lemoore
Source rating None
Skill identifier None
TD/TTE See Part IV

Prerequisites Designated Naval jet pilot,
Possess a Final Secret
security clearance, Designated
Service Group I Naval Aviator,
SERE Training

F/A-18 Fleet Replacement Pilot Category 4

Course number E-2A-0606
Course length 28 days
RFT date Currently available
Location VFA-125, NAS Lemoore
Source rating None
Skill identifier None
TD/TTE See Part IV
Prerequisites Designated Naval jet pilot,
Possess a Final Secret
security clearance, Designated
Service Group I Naval Aviator,
SERE Training

(2) Maintenance.

(a) Organizational. O-Level maintenance training has been modified to include the SLAM. These modifications have not changed the course lengths.

Aviation Ordnance Class A1 School Core

Course number C-646-2011
Course length 32 days
RFT date Currently available
Location AO A School, NATTC
Memphis, TN
Source rating NA
Skill identifier NEC none, MOS 6511 upon
completion of Core and Strand
course
TD/TTE See Part IV
Prerequisites Refer to
NAVMILPERSCOMINST
1236.1 (USN) or MCO
1500.12 (USMC) Clearance
Confidential

Aviation Ordnance Class A1 School (Airwing Strand)

Course number C-646-2012
Course length 26 days
RFT date..... Currently available
Location AO A School, NATTC
 Memphis, TN
Source rating NA
Skill identifier NEC none, MOS 6511 upon
 completion of Core and Strand
 course
TD/TTE See Part IV
Prerequisites Refer to
 NAVMILPERSCOMINST
 1236.1 (USN) or MCO
 1500.12 (USMC) Clearance
 Confidential

Aviation Ordnance Class A1 School (Ship/Shore Strand)

Course number C-646-2013
Course length 11 days
RFT date..... Currently available
Location AO A School, NATTC
 Memphis, TN
Source rating NA
Skill identifier NEC none, MOS 6511 upon
 completion of Core and Strand
 course
TD/TTE See Part IV
Prerequisites Refer to
 NAVMILPERSCOMINST
 1236.1 (USN) or MCO
 1500.12 (USMC) Clearance
 Confidential

F/A-18 Conventional Weapons Release and Loading

Course number D/E-646-0640
Course length 5 days
ORFT date..... Currently available
Locations SFWSL, NAS Cecil Field, FL
 SFWSP, NAS Lemoore, CA
Source rating AO
Skill identifier None
TD/TTE See Part IV

Prerequisites 1. AO A1

F/A-18 Stores Mgt Integrated Organizational
Maintenance (Initial)

Course number C-646-9973
Course length 26 days
RFT date Currently available
Locations MTU 1038 NAMTG, Lemoore, CA,
MTU 1039 NAMTG, Cecil Field, FL
Source rating AO
Skill identifier NEC 8842/MOS 6531 upon
completion of track D/E-646-0654
TD/TTE See Part IV
Prerequisites 1. AO A1, or equivalent
2. Confidential clearance

F/A-18 Stores Mgt Integrated Organizational
Maintenance (Career)

Course number C-646-9974
Course length 10 days
RFT date In development
Locations MTU 1038 NAMTG, Lemoore, CA,
MTU 1039 NAMTG, Cecil Field, FL
Source rating AO
Skill identifier NEC 8342/MOS 6531 upon
completion of track D/E-646-0641
TD/TTE See Part IV
Prerequisites 1. AO A1, or equivalent
2. Confidential clearance

F/A-18 Conventional Release System Test

Course number D/E-646-0647
Course length 4 days
RFT date Currently available
Locations SFWSLANT, NAS Cecil Field, FL
SFWSPAC, NAS Lemoore, CA
Source rating USN AT and USMC AO
Skill identifier NEC 8342/MOS 6531 upon
completion of track
TD/TTE See Part IV
Prerequisites Confidential Clearance

(b) **Intermediate.** I-Level maintenance training courses have been modified to include the SLAM. These modifications have not changed the course lengths.

Air Launched Guided Missile Intermediate Maintenance

Course number C-122-3111
Course length 11 days
RFT date Currently available
Locations MTU 4030 NAMTG, NS Mayport
MTU 4032 NAMTG, NAS Norfolk
MTU 4033 NAMTG, NAS North
Island
Source rating AO
Skill identifier NEC 6801
TD/TTE See Part IV
Prerequisites AO A1 or equivalent

Weapons Department Air-Launched Weapons Supervisors

Course number C-646-4108
Course length 19 days
RFT date Currently available
Locations MTU 4030 NAMTG, NS Mayport
MTU 4032 NAMTG, NAS Norfolk
MTU 4033 NAMTG, NAS North
Island
Source rating AO
Skill identifier None
TD/TTE See Part IV
Prerequisites 1. Confidential clearance
2. AO A1 or equivalent
3. E-5 or above.

Weapons Department Air-Launched Weapons General
Ordnance

Course number C-646-4109
Course length 19 days
RFT date Currently available
Locations MTU 4030 NAMTG, NS Mayport
MTU 4032 NAMTG, NAS Norfolk
MTU 4033 NAMTG, NAS North
Island
Source rating AO
Skill identifier None
TD/TTE See Part IV

- Prerequisites 1. Confidential clearance
 2. AO A1 or equivalent

(c) **Depot.** D-Level maintenance will be performed by the manufacturer. Training for depot level maintenance will be the responsibility of the manufacturer.

2. New or Modified Training Pipelines or Tracks. NA.

3. Explosive Ordnance Disposal (EOD) Training.

Explosive Ordnance Disposal Phase II-Navy

Course number..... A-431-0011
 Course length..... 181 days
 RFT date Currently available
 Location NAVSCOLEOD, Naval Surface Warfare
 Center (NSWC) Indian Head, MD
 Source rating General
 Skill identifier..... NEC 5332, NOBC 9230
 TD/TTE PEST
 Prerequisites Comply with BUPERSMAN Article 1410380.
 Complete course A-433-0022 and course
 A-431-0069. Secret Clearance.

Explosive Ordnance Disposal Pre-Deployment Training

Course number G-431-0001
 Course length 23 days
 RFT date Currently available
 Locations EODTEU ONE, NAS Barbers Point, HI
 EODTEU TWO, Fort Story, Va
 Source rating General
 Skill identifier..... NEC 5332, MOS 2336
 TD/TTE PEST
 Prerequisites None

Explosive Ordnance Disposal Shore Detachment Training

Course number G-431-0003
 Course length 27 days
 RFT date Currently available
 Locations EODTEU ONE, NAS Barbers Point, HI
 EODTEU TWO, Fort Story, Va
 Source rating General
 Skill identifier..... NEC 5332, MOS 2336
 TD/TTE PEST

Prerequisites None

Explosive Mobile Team Training

Course number..... G-431-0005
Course length..... 10 days
RFT date Currently available
Locations EODTEU ONE, NAS Barbers Point, HI
EODTEU TWO, Fort Story, Va
Source rating General
Skill identifier..... NEC 5332, MOS 2336
TD/TTE PEST
Prerequisites None

N. ON-BOARD TRAINING

1. Proficiency or Other Training Organic to New Development. Deployed proficiency training will be conducted to improve and enhance the capabilities of individuals. Training will consist of loading drills to maintain organizational weapon loading team proficiency.

2. Operator and Maintenance Personnel Qualification Standards (PQS) Requirements. Existing shipboard and EOD PQS will be updated and used by all personnel.

3. Maintenance Training Improvement Program (MTIP) Requirements. MTIP will be used to establish an effective and efficient training system that is responsive to fleet training requirements. MTIP is a training management tool that, through diagnostic testing, identifies individual training deficiencies at both the O and I-Levels of maintenance. MTIP allows increased effectiveness in the application of training resources through identification of skill and knowledge deficiencies at the activity, work center, or individual technician level. Remedial training will be concentrated where needed to enhance identified skill and knowledge shortfalls.

MTIP question and answer banks, for maintenance only, on this system will be required. Test questions are to be based upon Section II of the Task and Skill Analysis Report. Questions shall be indexed to Work Unit Codes and curriculum learning objective numbers, where applicable.

4. Other On-Board Training. Squadron loading teams will maintain their proficiency by participating in frequent upload and download training exercises.

O. LIST OF RELATED NAVY TRAINING PLANS AND APPLICABLE DOCUMENTS

<u>NTP/DOCUMENT TITLE</u>	<u>DOCUMENT/ NTP NUMBER</u>	<u>PDA CODE</u>	<u>STATUS</u>
SLAM ER NTP	A-50-9502/A	PMA-205	Approved 5/23/96
SLAM ILSP	MS-006/A	NAVAIR 4181A	Approved
F/A-18 NTP	A-50-7703	PMA-205	Approved
AN/AWW-13 NTP	A-50-8718A/A	PMA-205	Approved

PART II - BILLET AND PERSONNEL REQUIREMENTS

The following elements are not affected by the Standoff Land Attack Missile and, therefore, are not included in Part II of this NTP:

II.A. BILLET REQUIREMENTS

II.A.2.b. Military Billets per Fleet Operation Unit [Including Fleet Readiness Squadrons (FRSs)] and/or Activity - Old

II.B. PERSONNEL REQUIREMENTS

II.B.3. Foreign, Other Service, and Non-Military Personnel Annual Training Input Requirement

NOTE 1: This section of the Standoff Land Attack Missile NTP is a compilation of two intermediate level NECs with associated billets.

The addition of the Standoff Land Attack Missile to the intermediate level workload is only a small percentage of the required workload for that NEC. The NEC is not dedicated to the SLAM ER and therefore the training requirements will remain the same.

NOTE 2: This section of the Standoff Land Attack Missile NTP is presented by NEC for ease of understanding. It was developed to establish the total intermediate level maintenance requirements for the ordnance community. The requirements are to train ordnance personnel in the USN to receive an NEC to fill a billet.

PART II - BILLET AND PERSONNEL REQUIREMENTS

PART IV - TRAINING LOGISTICS SUPPORT REQUIREMENTS

The following elements are not affected by the SLAM and, therefore, are not included in Part IV of this NTP:

IV.A. TRAINING HARDWARE REQUIREMENTS

IV.A.1. Technical Training Equipment

IV.A.3. Electronic Test Equipment - General Purpose/Special Purpose

IV.A.4. Repair Parts for technical Training Equipment

IV.B. INITIAL TRAINING REQUIREMENTS

IV.B.1. Training Services

IV.C. FACILITY REQUIREMENTS

IV.C.1. Facility Requirements Summary (Space/Support) by Activity

IV.C.2. Facility Requirements Detailed by Activity and Course

IV.C.3. Facility Project Summary by Program

PART IV - TRAINING LOGISTICS SUPPORT REQUIREMENTS

IV.A.2 Test Equipment - General Purpose/Special Purpose/Special Tools

Description: AN/DSM-127, Missile Subsystem Test Set

Purpose: Used for fault isolation testing for WRA/SRA level at the D-Level. Training for the AN/DSM-127 is conducted as "On the Job Training" at WPNSTA Yorktown and is not contained in this section.

Description: TS-3519D/DSM, Air Launch Missile Test Set Simulator

Purpose: Simulates SLAM ER missile and interfaces with aircraft pylons for fault isolation testing.
