(54) Title: METHOD, SYSTEM AND APPARATUS FOR LAUNCHING AN INTERFACE WITH AN ELECTRONIC DEVICE

(57) Abstract: A method for launching (310) an interface with a remotely located electronic device (315). Specifically, a loader that is locally installed is launched. The loader is associated with an embedded application stored on a remote device. Communication is established with the remote device to access a first checksum value (320) that is stored on the remote device. Thereafter, the first checksum value is compared (330) against a second checksum value of a locally stored version of the embedded application. The locally stored version of the embedded application is launched (355) when the first check value matches the second checksum value.
