(54) Title: TRAVEL PILLOW

(57) Abstract: This invention is an inflatable or non-inflatable travel pillow that fits under the knees or lower thighs of the user, between those body areas and the cushion of a seat. The pillow elevates the user's lower thighs sufficiently to position the user's body back into the seat comfortably, and prevent the user from sliding down in the seat. A main body of the pillow has two thigh cradles (11a, 11b) located on its top surface. The thigh cradles (11a, 11b) are generally semicircular in shape, form depressions in the top surface of the main body, and are separated by a center rib (12) formed by the proximate sides of the thigh cradles (11a, 11b). In the inflatable embodiment, an air fill valve (13) is located on the outer surface of the main body.
