

CROWDSTRIKE

FALCONPY

PYTHON 3 SDK FOR THE CROWDSTRIKE FALCON OAUTH2 API

WHAT IS FALCONPY?

FalconPy is a Python 3 solution for interacting with the CrowdStrike Falcon OAuth2 API

Community-driven, FalconPy is provided as a completely free and Open Source project

PACKAGE AND REPOSITORY DETAILS

- Package name: crowdstrike-falconpy
- Package URL: <https://pypi.org/project/crowdstrike-falconpy/>

- Repository name: falconpy
- Repository URL: <https://github.com/CrowdStrike/falconpy>

FALCONPY COMPONENTS

Service Classes

- One class per service collection
- Method defined for every API operation
- Abstracts token interactions
- Token refresh

Uber Class

- A single class that provides a harness for the entire API
- Abstracts token interactions
- Token refresh
- Override

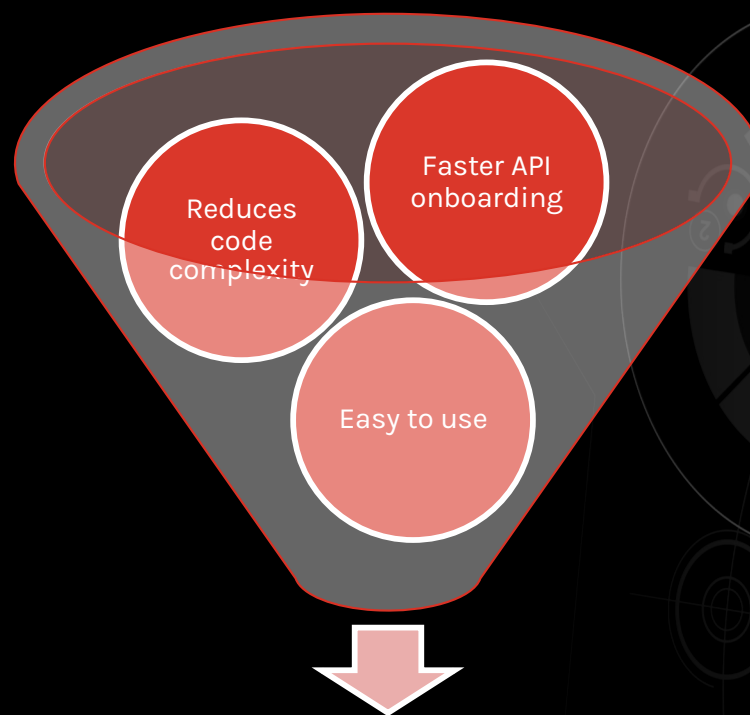

Shell

- Overlays API on a terminal shell
- Save / Load commands and payloads
- Prototype syntax
- Integrated debugger

Initial release: 04/21

FALCONPY BENEFITS

Reduces time to deliver your solution

USAGE

PACKAGE INSTALLATION AND REMOVAL

STANDARD INSTALLATION

```
$ python3 -m pip install crowdstrike-falconpy
```

BLEEDING EDGE / TESTING INSTALLATION

```
$ python3 -m pip install -I https://test.pypi.org/simple crowdstrike-falconpy
```

REMOVAL

```
$ python3 -m pip uninstall crowdstrike-falconpy
```

AUTHENTICATING TO THE API

SERVICE CLASS

```
from falconpy import sample_uploads as FalconUploads

falcon = FalconUploads.Sample_Uploads(creds={
    "client_id": falcon_client_id,
    "client_secret": falcon_client_secret
})
```

UBER CLASS

```
from falconpy import api_complete as FalconSDK

falcon = FalconSDK.APIHarness(creds={
    "client_id": falcon_client_id,
    "client_secret": falcon_client_secret
})
```

AUTHENTICATING TO THE API

SERVICE CLASS VARIATIONS

Credential Authentication

```
from falconpy import sample_uploads as FalconUploads

falcon = FalconUploads.Sample_Uploads(creds={
    "client_id": falcon_client_id,
    "client_secret": falcon_client_secret
})
```

Object Authentication

```
from falconpy import oauth2 as FalconAuth
from falconpy import sample_uploads as FalconUploads

auth = FalconAuth.OAuth2({
    "client_id": falcon_client_id,
    "client_secret": falcon_client_secret
})

falcon = FalconUploads.Sample_Uploads(auth_object=auth)
```

Legacy Authentication

```
from falconpy import sample_uploads as FalconUploads

auth = FalconAuth.OAuth2({
    "client_id": falcon_client_id,
    "client_secret": falcon_client_secret
})

try:
    token = auth.token()['body']['access_token']
except Exception:
    token = False

if token:
    falcon = FalconUploads.Sample_Uploads(access_token=token)
```

SERVICE CLASS - SAMPLE UPLOADS API

UPLOADING A SAMPLE, DOWNLOADING IT, THEN DELETING IT

```
FILENAME = "testfile.jpg"
PAYLOAD = open(FILENAME, 'rb').read()
response = falcon.UploadSampleV3(file_name="newfile.jpg", file_data=PAYLOAD)
sha = response["body"]["resources"][0]["sha256"]
response = falcon.GetSampleV3(ids=sha)
open('serviceclass.jpg', 'wb').write(response)
response = falcon.DeleteSampleV3(ids=sha)
print(json.dumps(response, indent=4))
```

UBER CLASS - SAMPLE UPLOADS API

UPLOADING A SAMPLE, DOWNLOADING IT, THEN DELETING IT

```
FILENAME = "testfile.jpg"
PAYLOAD = open(FILENAME, 'rb').read()
response = falcon.command('UploadSampleV3',
                           file_name="newfile.jpg",
                           data=PAYLOAD,
                           content_type="application/octet-stream"
                           )

sha = response["body"]["resources"][0]["sha256"]
response = falcon.command("GetSampleV3", ids=sha)
open('uberclass.jpg', 'wb').write(response)
response = falcon.command("DeleteSampleV3", ids=sha)
print(json.dumps(response, indent=4))
```

WHAT'S NEXT

FALCONPY ROADMAP

Outstanding service classes

Q2 2021

- Classes to cover remaining API service collections

FalconShell functionality expansion

Q3 2021

- Enhanced command, response and batch handling

v1.0 release

Q4 2021

- All base functionality available

* Dates are tentative estimates only
