## MEDICATION GUIDE SOLIRIS<sup>®</sup> (so-leer-is) (eculizumab)

#### injection, for intravenous use

#### What is the most important information I should know about SOLIRIS?

SOLIRIS is a medicine that affects your immune system. SOLIRIS may lower the ability of your immune system to fight infections.

- SOLIRIS increases your chance of getting serious meningococcal infections caused by *Neisseria meningitidis* bacteria. Meningococcal infections may quickly become life-threatening or cause death if not recognized and treated early.
  - You must complete or update your meningococcal vaccine(s) at least 2 weeks before your first dose of SOLIRIS.
  - If you have not completed your meningococcal vaccines and SOLIRIS must be started right away, you should receive the required vaccine(s) as soon as possible.
  - If you have not been vaccinated and SOLIRIS must be started right away, you should also receive antibiotics to take for as long as your healthcare provider tells you.
  - If you had a meningococcal vaccine in the past, you might need additional vaccines before starting SOLIRIS. Your healthcare provider will decide if you need additional meningococcal vaccines.
  - Meningococcal vaccines do not prevent all meningococcal infections. Call your healthcare provider or get emergency medical care right away if you get any of these signs and symptoms of a serious meningococcal infection:
    - fever
    - fever with high heart rate
    - headache and fever
    - confusion
    - muscle aches with flu-like symptoms
- fever and a rash
- headache with nausea or vomiting
- headache with a stiff neck or stiff back
- eyes sensitive to light

Your healthcare provider will give you a Patient Safety Card about the risk of serious meningococcal infection. Carry it with you at all times during treatment and for 3 months after your last dose of SOLIRIS. Your risk of meningococcal infection may continue for several weeks after your last dose of SOLIRIS. It is important to show this card to any healthcare provider who treats you. This will help them diagnose and treat you guickly.

# SOLIRIS is only available through a program called the ULTOMIRIS and SOLIRIS Risk Evaluation and Mitigation Strategy (REMS). Before you can receive SOLIRIS, your healthcare provider must:

- enroll in the ULTOMIRIS and SOLIRIS REMS program
- counsel you about the risk of serious meningococcal infections
- give you information about the signs and symptoms of serious meningococcal infection
- make sure that you are vaccinated against serious infections caused by meningococcal bacteria and that you receive antibiotics if you need to start SOLIRIS right away and you are not up to date on your vaccines
- give you a Patient Safety Card about your risk of meningococcal infection, as discussed above

**SOLIRIS may also increase the risk of other types of serious infections** caused by encapsulated bacteria, including *Streptococcus pneumoniae, Haemophilus influenzae,* and *Neisseria gonorrhoeae*.

- If your child is treated with SOLIRIS, your child should receive vaccines against *Streptococcus pneumoniae* and *Haemophilus influenzae type b* (Hib).
- Certain people may be at risk of serious infections with gonorrhea. Talk to your healthcare provider about whether you are at risk for gonorrhea infection, about gonorrhea prevention, and regular testing.
- Certain fungal infections (aspergillus) may also happen if you take SOLIRIS and have a weak immune system or a low white blood cell count.

### For more information about side effects, see "What are the possible side effects of SOLIRIS?"

### What is SOLIRIS?

SOLIRIS is a prescription medicine used to treat:

- people with paroxysmal nocturnal hemoglobinuria (PNH).
- people with atypical hemolytic uremic syndrome (aHUS).
- SOLIRIS is not for use in treating people with Shiga toxin E. coli related hemolytic uremic syndrome (STEC-HUS).
- adults with generalized myasthenia gravis (gMG) who are anti-acetylcholine receptor (AchR) antibody positive.
- adults with neuromyelitis optica spectrum disorder (NMOSD) who are anti-aquaporin-4 (AQP4) antibody positive.

# It is not known if SOLIRIS is safe and effective in children with PNH, gMG, or NMOSD.

# Who should not receive SOLIRIS?

Do not receive SOLIRIS if you have a serious meningococcal infection when you are starting SOLIRIS treatment.

- Before you receive SOLIRIS, tell your healthcare provider about all of your medical conditions, including if you:
  have an infection or fever.
- are pregnant or plan to become pregnant. It is not known if SOLIRIS will harm your unborn baby.
- are breastfeeding or plan to breastfeed. It is not known if SOLIRIS passes into your breast milk.
