

**A COMPENDIUM OF DRUGS USED FOR LABORATORY
ANIMAL ANESTHESIA, ANALGESIA, TRANQUILIZATION
AND RESTRAINT**

Including:

Blood Volumes, Blood Sampling Volumes, and Injection Volumes for Laboratory Animals

Signs of Pain in Animals

Guidelines on Adjuvants and Antibody Production

General Requirements for Survival Surgery

Detailed Considerations for Animal, Surgeon and Instrument Preparation Prior to Surgery

Rules of Thumb for Assessing the Need for Anesthesia or Anagesia Prior to Beginning a Procedure

Drug Compendium

BLOOD VOLUMES, BLOOD SAMPLING VOLUMES, AND INJECTION VOLUMES FOR LABORATORY ANIMALS

1. Circulating Blood Volumes of Healthy Adult Animals*

<u>Species</u>	<u>Volume (ml/kg)</u>
Cat	55 (47-66)
Dog	86 (79-90)
Ferret	75
Gerbil	67
Goat	70
Guinea Pig	75 (67-92)
Hamster	78
Monkey (rhesus)	54
Mouse	79 (78-80)
Pig	65
Rabbit	56 (44-70)
Rat	64 (50-70)
Sheep	60

*Can be 15% less in obese and old animals

2. Blood Sampling Volumes (one time sampling)

- a. Generally safe: **10% of circulating blood volume.**
Will initiate homeostatic cholinergic mechanism.
- b. Dangerous: **15-20% of circulating blood volume.**
Cardiac output and blood pressure is reduced
- c. Very Dangerous: **30-40% of circulating blood volume.**
Can induce hemorrhagic shock.
- d. Lethal: **>40% of circulating blood volume.**
Can cause 50% mortality in rats.

3. Blood Sampling Volumes (multiple sampling)

A maximum of **1.0%** of an animal's circulating blood volume can be removed daily. This is approximately 0.7 ml/kg/day

4. Maximum Injection Volumes (ml) Per Site

	<u>SC</u>	<u>IM</u>	<u>IP</u>	<u>IV</u>
Cat	50-100	1.0	50-100	2-5
Dog	100-200	2-5	200-500	10-15
Ferret	20-30	0.5-1.0	50-100	2-5
Guinea Pig	5-10	0.3	10-15	1.0
Hamster	3-4	0.1	3-4	0.3
Mouse	2-3	0.05	2-3	0.2
Monkey (rhesus)	15-20	1.0	50-75	5-10
Rabbit	30-50	0.5-1.0	50-100	1.0-5.0
Rat	5-10	0.3	5-10	0.5

SIGNS OF PAIN IN ANIMALS

The pain threshold appears to be the same for humans and other animals

Signs of Pain in Rodents

<u>Mild Pain</u>	<u>Moderate Pain</u>	<u>Severe Pain</u>
Reduced weight gain	Weight loss up to 20%	Weight loss >25%
Food and water consumption 40-75% of normal for 72 hours.	Food and water consumption <40% of normal for 72 hrs.	Food and Water consumption <40% for 7 days, or anorexic
Partial piloerection	Marked piloerection	Marked piloerection with other dehydration signs such as tenting of skin.
Subdued but responsive. Shows normal provoked behavior patterns.	Subdued behavior patterns even when provoked.	Unresponsive to extraneous actions and provocation.
Interacts with peers	Little peer interaction.	Persistently hunched
Hunched transiently, especially after dosing.	Hunched intermittently	Unprovoked vocalization
Transient vocalization	Intermittent vocalization when provoked.	Persistent and copious reddish nasoocular discharge
Transient reddish-brown nasoocular discharge.	Persistent reddish-brown nasoocular discharge	Labored breathing
Normal respiration	Abnormal breathing patterns	Persistent tremors
Transient tremors	Intermittent tremors	Persistent convulsions
No Convulsions	Intermittent convulsions	Prostration > 1 hr
No prostration	Transient prostration (<1 hr)	Self mutilation
No self-mutilation	No self mutilation	

Signs of Acute Pain in Rabbits

- a. Drinking less water
- b. Sits hunched up in corner of cage
- c. Reduced awareness and response to environmental stimuli
- d. Not using affected body part
- e. Licking or scratching a particular area
- f. Body drawn in or continuously maximally extended
- g. Noise on expiration
- h. Rapid, shallow breathing
- i. Unsteady gait
- j. Self-mutilation
- k. Eating less
- l. Weighs less
- m. Not grooming. Scrappy fur.
- n. Change in temperament

Signs of Acute Pain in Dogs and Cats

- a. Eating less
- b. Drinking less
- c. Weighs less
- d. Vocalizing, especially when moving or when the painful area is touched.
- e. Licking, picking or scratching a particular area
- f. Not using affected body part
- g. Change in temperament
- h. Pacing, repeatedly lies down and gets up again
- i. Lack of mobility (with joint or abdominal pain)
- j. Failure to groom
- k. Abnormal resting postures
- l. Failure to show normal pattern of inquisitiveness
- m. Noise on expiration
- n. Rapid, shallow breathing

Signs of Chronic Pain in Dogs and Cats

- a. Excess licking, rubbing, biting or scratching the painful area.
- b. Becomes more withdrawn
- c. Loss of appetite
- d. Sunken eyes
- e. Dehydration
- f. Dysuria
- g. Weight loss

Signs of Acute Pain in Monkeys

- a. Eats less
- b. Drinks less
- c. Loss of appetite
- d. Change in bowel habits
- e. Grimacing
- f. Sits unresponsively in cage
- g. Change in temperament
- h. Vocalizes, especially when moving or when painful area is touched
- i. Licking, scratching or self-mutilating a particular area
- j. Lack of mobility (with joint or abdominal pain)
- k. Failure to groom
- l. Abnormal resting postures

Proposed Method to Quantify Pain, Distress and Suffering
(Morton & Griffiths, Vet. Record. 116:431-436, 1985)

Variable

Body Weight Changes

- 0 = Normal**
- 1 = <10% loss**
- 2 = 10-15% loss**
- 3 = >20% loss**

Physical Appearance

- 0 = Normal**
- 1 = Lack of Grooming**
- 2 = Rough coat, nasoocular discharge**
- 3 = Very rough coat, abnormal posture, enlarged pupils**

Measurable Clinical Signs

- 0 = Normal**
- 1 = Small changes of potential significance**
- 2 = Temp change of 1-2 C. Cardiac & respiratory rates increased up to 30%**
- 3 = Temp change >2 C. Cardiac & respiratory rated increased up to 50% or greatly decreased**

Unprovoked behavior

- 0 = Normal**
- 1 = Minor changes**
- 2 = Abnormal, reduced mobility, decreased alertness, inactive**
- 3 = Unsolicited vocalizations, self mutilation, either very restless or immobile**

Behavioral Responses to External Stimuli

- 0 = Normal**
- 1 = Minor depression/exaggeration of response**
- 2 = Moderately abnormal responses**
- 3 = Violent reactions or comatose**

If "3" is given more than once, change all "3" into "4". Sum the scores from all variables.

- 0-4 = Normal**
- 5-9 = Mild pain/distress**
- 10-14 = Moderate pain/distress**
- 15-20 = Severe pain/distress**

GUIDELINES ON ADJUVANTS AND ANTIBODY PRODUCTION

(Condensed from Jackson, L. and Fox, J. ILAR Jour. 37(3):141-152, 1995)

Note: NIH/OLAW requires *in vitro* production of monoclonal antibodies as the default action. Monoclonal antibody production by mouse hybridomas requires strong scientific justification, often entailing documentation that *in vitro* production is not feasible.

In Vivo Monoclonal Antibody Production

1. Hybridoma recipient mice must be histocompatible, or if not, must be immunodeficient or immunosuppressed by exogenous means such as radiation.
2. Female mice abdominal musculature is presumed to be more distensible, which allows larger ascites volumes to be tolerated without discomfort. BALB/c male mice are aggressive and often require individual housing.
3. The immunization schedule and the selection of, or need for, adjuvants should be determined based on the nature of the antigen. For example, intravenous inoculation can be used for particulate antigens without adjuvant and for booster immunizations of soluble antigens in saline. Subcutaneous and intraperitoneal routes of injection are commonly used for primary immunization of mice with antigen-adjuvant preparation.
4. Because of limited muscle mass, intramuscular injections in mice are discouraged. Intradermal injections are usually limited to a total volume of 0.05 ml. Volumes of 0.05 to 0.2 ml may be administered subcutaneously, and volumes <0.5 ml may be administered intraperitoneally. We limit the total volume to 0.1 ml if Freund's Complete Antigen (FCA) is used. Freund's incomplete adjuvant (FIA) should be used for subsequent boosts.
5. In mice that do not receive a priming agent prior to hybridoma cell inoculation, solid tumors may form, but little or no ascites is produced. Pristane is used most often to prime the peritoneal cavity. An alternative to the use of Pristane is FIA. Biologic effects of pristine include granulomatous inflammation in the peritoneum, immunosuppression, induction of growth factors, lymphatic obstruction, etc. The interval between Pristane priming and hybridoma cell inoculation varies from 5 days to 4 weeks.
6. The optimal cell number for inoculations may be dependent on its biologic behavior. Pilot studies may be needed. Guidelines for the number of cells in the hybridoma inoculum range from 10,000 to 10,000,000.
7. Ascites pressure is to be relieved by abdominal paracentesis when visible abdominal distention becomes evident and before the development of marked distention with clinical signs of pain or distress. Ascitic fluid volume should not exceed 20% of the baseline body weight prior to performing paracentesis. Anesthesia is recommended when performing paracentesis. An 18-20 gauge

needle is often used. To help prevent shock, 2-3 ml of warm saline or lactated Ringers solution may be administered subcutaneously to the mouse at the time of paracentesis. Intervals of 1-3 days between taps are recommended in the literature. Some MCPHU investigators use only one tap. MCPHU policy is for a maximum of 3 taps and euthanasia should precede the final abdominal paracentesis.

8. Animals must be observed daily for signs of pain or distress, particularly for difficult breathing, pale eyes, ears, and mucous membranes. Animals should be monitored for at least 30 minutes following an abdominal tap.

Polyclonal Antibody Production

1. Rabbits are commonly used, although other animals are used as well. Rabbits are usually over 2 kg in weight before immunization commences.
2. Antigens should be free of extraneous microbial contamination. The presence of byproducts, such as polyacrylamide gel, should be avoided. Extremes of pH, contamination with chemical or other toxic agents should be avoided.
3. If FCA is used, the mycobacteria should first be resuspended by vortexing or shaking. One part or less of FCA to one part antigen (v/v) is recommended. Glass syringes are preferred for mixing. The emulsion is properly prepared when it is thick and difficult to inject back and forth. A droplet placed into a saline solution should not disperse. For antigen-adjuvant preparations using adjuvants other than Freund's follow manufacturer's instructions.

Freund's Adjuvant and Alternatives

1. The use of FCA requires sound scientific justification, as per USDA policy.
2. FCA should be used only once, for initial immunization. Use FIA for boosters.
1. Formulations of FCA not exceeding 0.1 mg dry mycobacterial cell mass/ml are recommended to avoid increased inflammation and necrosis. The use of FCA is specifically discouraged for use in primates because of subsequent positive tuberculin test results.

Injection Site Selection and Preparation (Freund's and other adjuvants)

1. Care should be taken to avoid areas where animal may be lifted (e.g. the dorsal cervical area of rabbits). Avoid sites that may be prone to self-mutilation, and avoid sites that may interfere with ambulation, such as footpads. "Footpad" injections in rabbits are prohibited as the lack of anatomically defined footpads plus the weight bearing function of the rabbit's feet preclude this site for immunization.
2. Clip hair from intradermal and subcutaneous sites and aseptically prepare the same for injection. The use of sterile needles and syringes is mandatory.

Routes, Volumes, and Sites of Administration with FCA and FIA

1. Inject small volumes into multiple injection sites. Injection sites must be sufficiently separated to prohibit coalescing of the inflammatory lesions. This helps prevent draining abscesses and provides more foci for antigen presentation.
2. Booster sites should be distanced from previous injection sites.
3. Maximum volume for rabbit intradermal injection is 0.1 ml/site, using a 25-27 gauge needle. Intradermal injection is not generally recommended in rodents; however, some institutions use 0.01-0.05 ml/site.
4. Maximum subcutaneous injection in rabbits is 0.25 ml/site. Subcutaneous injection volumes in rodents are maximally 0.10 ml/site.
5. The intramuscular route of injection is not usually permitted with FCA.
6. Intraperitoneal Freunds is only recommended in rodents. Volumes should be <0.1 ml.
7. Intravenous use of FCA or FIA is not permitted.
8. Investigators are to observe animals for ulcers, infection, etc., no less often than 3 times weekly for a period of 4 weeks following immunization.

Blood Collection After Immunizations

1. Survival bleeding is most commonly performed via tail vein or retro-orbital sinus from rodents under anesthesia, and via the marginal ear vein or central ear artery in rabbits with appropriate sedation or tranquilization.
2. Blood collection from rabbit ears by transecting the vein is prohibited. The use of xylene for vasodilation is discouraged.
3. Intracardiac blood collection is limited to terminal procedures and is performed under general anesthesia in both rodents and rabbits. Survival intracardiac blood collection is not permitted.

GENERAL REQUIREMENTS FOR SURVIVAL SURGERY

(Additional details can be found on the following pages)

1. Federal law requires that *all* survival surgeries on any vertebrate animal (including rodents) be performed aseptically.
 - a. Sterile surgical instruments and supplies must be used for each individual animal. Satisfactory sterilization may be obtained via autoclaving, sterilization (e.g. 2% glutaraldehyde solution) and gas sterilization. Chemicals such as 70% ethanol and quaternary ammonium compounds are *not* sterilants. The use of a hot glass bead sterilizer may be satisfactory if the handle of the instrument is kept sterile or sterilized in the hot bead sterilizer prior to use.
 - b. The surgical field should be broadly clipped (avoid shaving if possible), and washed with an antiseptic cleanser (e.g. providone iodine surgical scrub). 70% alcohol may be used as a final skin preparation. *70% alcohol by itself is inadequate for skin disinfection.*
 - c. The surgical field should be draped with a sterile drape.
 - d. The surgeon should properly wash his/her hands (and arms if possible) with an antiseptic cleanser, and don sterile gloves and gown. A surgical mask must be used. Head and shoe covers are recommended.
 - e. The surgeon must reglove if any nonsterile object is touched during surgery. *Most surgeons never drop their hands below their waist.*
 - f. The surgeon and surgical assistants must be skilled in the techniques required of them for the specific procedure being performed.
2. All survival surgery on any non-rodent mammal *must* be performed in an aseptic surgical suite, as defined in the *Guide for the Care and Use of Laboratory Animals*, and approved by the Institutional Animal Care and Use Committee. Survival surgery on rodents may be performed in an aseptic surgical suite, or in a clean area of a laboratory or other room that is used for surgery only, when a surgical procedure is being performed.
3. All animals must be observed until they recover from anesthesia to the point of being able to maintain sternal recumbency. Animals must be kept separate from other animals (i.e. in separate cages) until fully recovered.
4. Drugs for pain relief or other purposes must be used in the manner stated in the investigator's IACUC approved protocol.

5. **The university's Anesthesia Record and Postprocedure Treatment form *must* be used when survival surgery is performed on any non-rodent species.**

These forms are available at all surgery suites. For the protection of the investigator, it is suggested that these forms be used for any surgical procedure, including non-survival surgery.

DETAILED CONSIDERATIONS FOR ANIMAL, SURGEON and INSTRUMENT PREPARATION PRIOR TO SURGERY

- A. Bathe the entire body the day before, if grossly dirty.
- B. Removal of hair from operative site.
 - 1. Should be done outside of the operating room or surgical area. In ULAR surgical suites there is a prep area separate from the room where the surgery is performed.
 - 2. The amount of time between the pre-op clip and the operation has a direct effect on the wound infection rate.
 - a. Avoid scrapes, nicks, scratches, and cuts because cutaneous bacteria will proliferate in these areas and increase the chances of infection. Clip, do not shave whenever possible.
 - b. The extent of the area to be clipped is determined by the site of the incision and the nature of the operation. For orthopedic surgery of the extremities, the clip should extend from one joint above to one joint below the area of incision.
 - 3. Skin prep in the operating room has the disadvantages that the anesthesia time is prolonged and loose hair remaining in the surrounding drapes may get into the wound.
- C. Skin disinfection of the operative area.
 - 1. Use a commercially available sterile skin preparation set.
 - a. Wash your hands before preparing the animal.
 - b. Use sterile gloves (if necessary) for maximal protection.
 - c. Place absorbent pads around patient to protect operating room table and sheets or heating pad from getting wet.
 - 2. Antiseptic agents used to prep skin.
 - a. Most commonly used skin antiseptic is povidone/iodine, a complex of polyvinylpyrrolidone and iodine.
 - i. It possesses the potent germicidal effect of iodine without many of its irritating properties.
 - ii. The activity is prolonged because it is released gradually from the binding polymer.
 - iii. It is effective in the presence of purulent exudates but has a shorter duration in the presence of blood or serum.
 - iv. It can be safely used on mucous membranes but do not allow it to pool on skin or in body cavities.

- v. It has been shown to become contaminated by Pseudomonas spp. Thus, the practice of keeping spray bottles of diluted Betadine or scrub-soaked gauze sponges can actually contribute to post-op infections.
 - b. 70% alcohol
 - i. Works by defatting the skin and by mechanical removal of microorganisms.
 - ii. It is flammable and should be used in small quantities and not allowed to pool.
 - c. Chlorhexidine
 - i. Comes in a 4% aqueous concentration skin cleanser (Hibiclens) or as a tincture of 0.5% chlorhexidine gluconate in 70% isopropyl alcohol (Hibitane).
 - ii. Hibiclens residues accumulate on the skin with repeated use and produce a prolonged effect, up to 6 hours.
 - iii. Hibitane maintains a reduction in microbial flora for at least 4 hours. Its activity is decreased in the presence of soap or organic matter.
 - iv. Chlorhexidine can cause corneal damage if splashed in the eye.
3. The skin scrub begins with chorhexidine or povidone/iodine at the line of the proposed incision and proceeds to the periphery of the area.
 - a. Use a circular motion in ever-widening circles.
 - b. The soiled cleaning sponges are discarded when the prep area is covered. A soiled sponge is never brought back over a scrubbed surface.
 - c. Repeat with separate sponges for a minimum of 5 minutes.
 4. Wipe scrub off with 70% alcohol or pat dry with sterile towel. Remove the towel by lifting it toward self without dragging the edge over cleansed area.
 5. Paint the prep site with povidone-iodine solution.
 - a. Apply prep starting at the incision site and move in a circular motion to the periphery. Do not bring the sponge back over the already prepped area.
 5. Remove absorbent pad without reaching over prepped area.

SURGICAL SCRUB FOR THE SURGEON

- A. An area equipped with surgical sinks should be close to, but apart from the operating room.
- B. Objectives of the surgical scrub:
 - 1. To remove dirt, skin, oil, and microbes from hands and lower arms.
 - 2. To reduce the microbial count to as near zero as possible. (Bacteria multiply rapidly on gloved hands which provide great conditions for growth).
 - 3. To leave an antimicrobial residue on the skin to prevent the growth of microbes for several hours.
- C. The anatomic counted brush stroke method takes about 5 minutes.
 - 1. 30 strokes to the nails and 20 strokes to each area of the skin.
 - 2. When scrubbing, the fingers, hands, and arms should be visualized as having four sides; each side must be scrubbed effectively.
- D. Procedure
 - 1. Open sterile scrub brush before wetting hands.
 - 2. Wet hands and arms and wash thoroughly to 2 inches above the elbows. This loosens surface debris and transient organisms. Scrubbing with a brush removes the resident flora.
 - 3. Clean nails with nail cleaner provided in the scrub brush packet under running water.
 - 4. Rinse thoroughly with running water.
 - 5. Begin scrub – hold hands up – nails, fingers, and hand. In the one-brush method each side is alternately scrubbed as the procedure advances proximally to the elbow.
 - 6. Each side of the arm is scrubbed to 2" above the elbow.
 - 7. Keep hands above elbows to allow water and detritus to flow away from the first scrubbed and cleanest area. Hold hands and arms away from body.
 - 8. Rinse or pat hands dry without rinsing. A study described in the *Am J of Surgery* compared rinsing hands washed with chlorhexidine to patting hands dry without rinsing. The results were lower bacterial counts post-surgically on the hands which were not rinsed.
 - 9. Hold hands and arms up in front of body with elbows slightly flexed while entering the operating room.
 - 10. Drying hands – grasp sterile towel and lift up and away from sterile field. Bend forward slightly at waist with hands and elbows above waist and away from body.
 - a. Allow towel to unfold downward to its full length.
 - b. Top half of towel is held securely with one hand and the opposite fingers and hands are blotted dry, making sure they are thoroughly dry before moving up the arm. To avoid contamination a rotating motion is used while moving up the arm to the elbow and an area is not retraced.

- c. The lower end of the towel is grasped with the dried hand, and same procedure is repeated to dry the other hand and forearm.
11. Using aseptic technique, don surgical gloves.

DRAPING OF THE ANIMAL

A variety of different surgical drapes are available. All must be sterile when used. For small rodents, commercially available plastic drapes with a small center hole provide a satisfactory alternative to traditional surgical drapes (e.g. consider using 3M Brand Steri-Drape 1024 which has a 2.25 x 1.13 inch oval aperture).

STERILIZATION OF INSTRUMENTS

All instruments used in survival surgery on any species must be sterile at the time of their use. Common ways of assuring sterilization include autoclaving, ethylene oxide gas sterilization, and soaking in a sterilant solution for the appropriate length of time. It is recognized that for multiple surgical procedures on small rodents it is often difficult to have sufficient sterile instruments between animals and “flash” sterilize them in a commercial glass bead sterilizer. Another option is to have more than one set of instruments available and soak one or more sets in a commercial sterilant solution while the others are being used. A indicator of sterility must be placed within the surgical pack and these strips should be maintained with the surgical records.

RULES OF THUMB FOR ASSESSING THE NEED FOR ANESTHESIA OR ANALGESIA PRIOR TO BEGINNING A PROCEDURE

1. **If a procedure would probably cause pain or distress in a human, it will be painful or distressful to a laboratory animal.** Although there are some exceptions, this is the guiding principle used at Drexel University and by the federal government.
2. The corollary to the above is that if a human would require anesthesia, analgesia or tranquilization, so would a laboratory animal.
3. Pain in most laboratory animals is difficult to judge because they do not exhibit many of the outward signs we associate with pain in humans. Often, the lack of an overt pain response is an adaptive mechanism used to promote survival in the animals' natural habitat. Use rule 1 above, and see the enclosed guidelines for assessing pain in laboratory animals.
4. Procedures that only require a burr hole to be made through the skull *may not* require postoperative analgesia. Procedures that require the periosteum to be scraped or muscles to be moved *most likely will* require post operative analgesia.
5. **Do no assume that because an anesthetic is used, there is adequate postoperative relief of pain.** Most anesthetics provide minimal and very transient postoperative pain relief.
6. Never use a tranquilizer in lieu of an anesthetic or analgesic. The majority of tranquilizers have little or no analgesic activity, and by definition, they are not anesthetics.
7. Never use a neuromuscular blocking agent in lieu of an anesthetic or analgesic. They do not provide anesthesia or analgesia.

DRUG COMPENDIUM

ANALGESIA (1-4 HOURS OF DURATION)

(Note: This listing is only for drugs having their frequency of administration listed)

- Amphibian: clonidine, fentanyl; see Frog
- Bird: butorphanol
- Cat: butorphanol, medetominine, meperidine, methadone, morphine, nalbuphine, nalorphine, oxymorphone, pentazocine, Phenobarbital
- Cattle: acetylsalicylic acid, buprenorphine, butorphanol, meperidine, morphine
- Dog: acetaminophen, acetylsalicylic acid, butorphanol, fentanyl, ibuprofen, medetomidine, meperidine, methadone, morphine, nalbuphine, nalorphine, oxymorphone, pentazocine, Phenobarbital
- Ferret: butorphanol, meperidine, morphine, nalbuphine, oxymorphone, pentazocine
- Frog: butorphanol, flunixin
- Gerbil: butorphanol, meperidine, morphine, nalbuphine, oxymorphone, pentoazocine
- Guinea Pig: acetylsalicylic acid, butorphanol, codein, fentanyl, ibuprofen, meperidine, morphine, nalbuphine, oxymorphone, pentazocine
- Hamster: acetylsalicylic acid, butorphanol, fentanyl, meperidine, morphine, nalbuphine, oxymorphone, pentazocine
- Mouse: acetaminophen, acetylsalicylic acid, butorphanol, codeine, ibuprofen, meperidine, methadone, morphine, nalbuphine, oxymorphone, pentazocine
- Primate: acetylsalicylic acid, burotphanol, methadone, morphine, nalbuphine, oxymorphone, pentazocine.
- Rabbit: acetylsalicylic acid, butorphanol, fentanyl, ibuprofen, meperidine, methadone, morphine, nalbuphine, oxymorphone, pentazocine.
- Rat: acetaminophen, acetylsalicylic acid, butorphanol, codeine, fentanyl/mebetomidine, ibuprofen, ketamine/xylazine, meperidine, methadone, morphine, nalbuphine, nalorphine, oxymorphone, pentazocine, phenobarbital

Reptile: meperidine

Sheep/Goat: acetylsalicylic acid, buprenorphine, butorphanol, clondine, codeine, meperidine, methadone (goat), morphine, nalbuphine, pentazocine

Swine: acetylsalicylic acid, butorphanol, fentanyl, meperidine, morphine, oxymorphone, pentazocine, sufentanyl

ANALGESIA (4-8 HOURS DURATION)

(Note: This listing is only for drugs having their frequency of administration listed)

Amphibian: codeine, morphine

Cat: buprenorphine, butorphanol, methadone, pentazocine, sufentanyl

Cattle:

Dog: acetaminophen, buprenorphine, codeine, methadone, morphine, sufentanyl

Ferret: buprenorphine, morphine, oxymorphone

Gerbil: buprenorphine

Guinea Pig: acetylsalicylic acid, buprenorphine

Hamster: acetylsalicylic acid, buprenorphine

Mouse: buprenorphine, codeine

Primate: acetaminophen, buprenorphine, hydromorphone, flunixin

Rabbit: acetylsalicylic acid, buprenorphine

Rat: buprenorphine

Sheep/Goat:

Swine: acetylsalicylic acid

ANALGESIA (8 OR MORE HOURS DURATION)

(Note: This listing is only for drugs having their frequency of administration listed)

- Bird: flunixin
- Cat: acetylsalicylic acid, carprofen, fentanyl patch, flunixin, ibuprofen, ketoprofen, morphine, phenylbutazone, tolfenamic acid
- Cattle: acetylsalicylic acid, flunixin, ketoprofen, meoxicam, phenylbutazone, tofenamic acid
- Dog: acetylsalicylic acid, bupivacaine (epidural), carprofen, fenoprofen, fentanyl patch, flunixin, ibuprofen, ketoprofen, ketorolac, meloxicam, naproxen, oxymorphone (epidural), phenylbutazone, tolfenamic acid
- Ferret: buprenorphine, flunixin
- Frog: butorphanol
- Gerbil: flunixin
- Guinea Pig: diclofenac, flunixin, piroxicam
- Hamster: flunixin
- Mouse: flunixin
- Primate: carprofen, flunixin, ketoprofen, naproxen
- Rabbit: carprofen, fentanyl patch, flunixin, ketoprofen, lofentanil, meloxicam, piroxicam
- Rat: caprofen, diclofenac, flunixin, ketoprofen (in jelly), lofentanil, meloxicam, piroxicam
- Reptile: carprofen, flunixin, ketoprofen
- Sheep/Goat: acetylsalicylic acid, buprenorphine, carprofen, fentanyl patch flunixin, phenylbutazone
- Swine: buprenorphine, carprofen, fentanyl patch, flunixin, ketoprofen, ketorolac, phenylbutazone

ANESTHESIA – GENERAL PARENTERAL

(Note: This listing is only for drugs having their frequency of administration listed)
(Single dose duration less than 1 hour)

- Amphibian: tricaine methane sulfonate
- Bird: alphaxalone/alphadalone, propofol
- Cat: alphaxalone/alphadalone, ketamine, methohexital, pentobarbital, propofol, thiamylal, thiopental, tiletamine/zolazepam
- Cattle: ketamine, methohexital, pentobarbital, thiamylal, thiopental, tiletamine
- Dog: etomidate, fentanyl/fluanisone, ketamine, methohexital, pentobarbital, propofol, thiamylal, thiopental, tiletamine/zolazepam
- Ferret: alphaxalone/alphadalone, ketamine, tiletamine/zolazepam
- Fish: eugenol
- Gerbil: alphaxalone/alphadalone, fentanyl/fluanisone, ketamine, pentobarbital, tiletamine zolazepam, tribromoethanol
- Guinea Pig: alphaxalone/alphadalone, ketamine, fentanyl/fluanisone, methohexital, pentobarbital, thiopental, tiletamine/zolazepam
- Hamster: alphaxalone/alphadalone (up to 2.5 hours), ketamine, medetomidine, methohexital, pentobarbital, thiopental, tiletamine/zolazepam
- Mouse: alphaxalone/alphadalone, fentanyl/fluanisone, hexobarbital, ketamine, methohexital, metomidate, pentobarbital, propofol, thiamylal, thiopental, tiletamine/zolazepam, tribromoethanol
- Primate: alphaxalone/alphadalone, ketamine, ketamine/xylazine, methohexital, pentobarbital, propofol, thiopental, tiletamine/zolazepam
- Rabbit: alphaxalone/alphadalone, fentanyl/fluanisone, hexobarbital, ketamine, medetomidine, methohexital, pentobarbital, propofol, thiamylal, thiopental, tiletamine/zolazepam
- Rat: alphaxalone/alphadalone, fentanyl/fluanixone, hexobarbital ketamine, methohexital, pentobarbital, propofol, thiamylal, thiopental, tiletamin/zolazepam, tribromoethanol

Reptiles: ketamine

Sheep/Goat: alphaxalone/alphadalone, etomidate, ketamine combinations, methohexital, pentobarbital, propofol, thiamylal, thiopental, tiletamine/zolazepam

Swine: alphaxalone/alphadalone, ketamine, methohexital, metomidate, pentobarbital, thiamylal, thiopental, tiletamine/zolazepam

ANESTHESIA – GENERAL PARENTERAL

(Note: This listing is only for drugs having their frequency of administration listed)
(Single dose duration greater 1-3 hours)

Rat: inactin

ANESTHESIA – GENERAL PARENTERAL

(Note: This listing is only for drugs having their frequency of administration listed)
(Single dose duration greater than 3 hours)

Cat: urethane

Dog: urethane

Ferret: urethane

Guinea Pig: urethane

Hamster: urethane

Rabbit: urethane

Rat: ketamine/xylazine infusion, pentobarbital (some females), urethane

ANESTHESIA – LOCAL ANESTHETICS OF 1-3 HOUR DURATION

(Note: This listing is only for drugs having their frequency of administration listed)

Amphibian: benzocaine

Cat: bupivacaine, lidocaine, mepivicaine

Cattle: mepivacaine

Dog: bupivacaine, lidocaine, mepivacaine

Ferret:

Fish: benzocaine

Gerbil:

Guinea Pig:

Hamster:

Mouse:

Primate:

Rabbit:

Rat: bupivacaine

Sheep/Goat:

Swine:

NEUROMUSCULAR BLOCKING/IMMOBILIZING AGENTS

****These agents should only be given when adequate anesthesia is provided****

Bird: atacurium

Cat: atacurium, gallamine, pancuronium, pipecuronium, rocuronium, succinylcholine, tubocurarine, vecuronium

Cattle: alcuronium, gallamine, panuronium, succinylcholine, tubocurarine

Dog: alcuronium, atacurium, gallamine, pancuronium, pipecuronium, pyridostigmine, succinylcholine, vecuronium

Ferret: succinylcholine

Fish: gallamine

Frog: succinylcholine

Gerbil:

Guinea Pig:

Goat: etorphine, pancuroniu, succinylcholine

Hamster:

Mouse:

Primate: atacurium, mivacurium, pancuronium, vecuronium

Rabbit: atacurium, gallamine, pancuronium, pipecuronium, succinylcholine, tubocurarine, vecuronium

Rat: atacurium, pancuronium, succinylcholine, vecuronium

Sheep: atacurium, etorphine, gallamine, pancuronium, succinylcholine, tubocurarine, vecuronium

Swine: atacurium, doxacurium, etorphine, gallamine, mivacurium, pancuronium, pipecuronium, rocuronium, succinylcholine, vecuronium

TRANQUILIZERS/SEDATIVES/HYPNOTICS

Bird:	acetylpromazine, diazepam, midazolam
Cat:	acetylpromazine, alphaxalon/alphadalone, α -chloralose ¹ , chlorpromazine, diazepam, etomidate, etorphine/methotriimeprazine, fentanyl/droperidol, midazolam, phenobarbital, promazine, xylazine
Cattle:	acetylpromazine, chloral hydrate, α -chloralose, chlorpromazine, diazepam, midazolam, promazine, xylazine
Dog:	acetylpromazine, chloral hydrate, α -chloralose, chlorpromazine, diazepam, ethylosobutrazine, etomidate, etorphine/methotriimeprazine, fentanyl/droperidol/midazolam, medtomidine, pentobarbital, phenobarbital, promazine, romifidine, xylazine
Ferret:	acetylpromazine, diazepam
Fish:	etomidate
Gerbil:	alphaxalone/alphadalone, diazepam, fentanyl/fluanisone
Guinea Pig:	acetylpromazine, alphaxalone/alphadalone, chloral hydrate, α -chloralose, chlorpromazine, diazepam, droperidol, etomidate, fentanyl/droperidol, promazine
Hamster:	acetylpromazine, alphaxalone/alphadalone, α -chloralose, diazepam, fentanyl/droperidol, fentanyl/fluanisone, medetomidine, promazine, tiletamine, triflupromazine
Mouse:	acetylprmazine, alphaxalone/alphadalone, chloral hydrate, α -chloralose, chlorpromazine, diazepam, etomidate, fentanyl/droperidol, fentanyl/fluanisone, promazine, xylazine
Opossum:	azaperone
Primate:	acetylpromazine, alphaxalone/alphadalone, diazepam, droperidol, etomidate, fentanyl/droperidol, fentanyl/fluanisone, promazine, xylazine
Rabbit:	acetylpromazine, alphaxalone/alphadalone, chloral hydrate, α -chloralose, chlorpromazine, diazepam, etomidate, etorphine/methotriimeprazine,

¹ See drug listing for possible use as an anesthetic

fentanyl/droperidol, fentanyl/fluanisone, medetomidine, midazolam, phenobarbital, promazine, xylazine

- Rat: acetylpromazine, alphaxalone/alphadalone, chloral hydrate, α -chloralose, chlorpromazine, diazepam, droperidol, etomidate, etorphine/methotriprazaine, fentanyl/droperidol, midazolam, promazine, xylazine
- Sheep/Goat: acetylpromazine, chlorpromazine, diazepam, etomidate, etorphine/acetylpromazine, etorphine/methotriprazaine, promazine, romifidine, xylazine
- Swine: acetylpromazine, alphaxalone/alphadalone, azaperone, α -chloralose, chlorpromazine, climazolam, diazepam, droperidol, ethylisobutrazine, etomidate, fentanyl/droperidol, fluazepam, ketamine/xylazine, midazolam, promazine, triflupromazine, xylazine

USE OF THIS DRUG COMPENDIUM

By Jerald Silverman, DVM

Updated by Richard B. Huneke, DVM

1. This compendium provides dosages of drugs and drug combinations for use in research protocols approved by the Institutional Animal Care and Use Committee (IACUC) of Drexel University and by persons approved by that committee.

No drugs, including antibiotics, replacement fluids, etc. can be used without IACUC approval. IN unique circumstances, approval by the university's veterinarians can be obtained without IACUC approval.
2. Very often, *numerous dosages for the same drug are provided* for the same species. These often reflect different research needs (e.g., controlling minimal versus severe pain) or the experience of different authors. A Laboratory Animal Medicine veterinarian will be pleased to help you.
3. Drug combinations frequently provide better overall anesthesia than one drug alone. If you would like to use a drug combination but need further consultation, please call a Laboratory Animal Medicine veterinarian. It is important to check the listings for all drugs in a drug combination.
4. The user is expected to be knowledgeable about the physiologic effects of these drugs. Help may be obtained in laboratory animal and human medicine texts kept in the university library, as well as from the Laboratory Animal Medicine veterinarians.
5. **It is the responsibility of the principal investigator to make informed decisions, and not to blindly follow this Compendium. For example, certain analgesics may provide satisfactory visceral analgesia but unsatisfactory skeletal analgesia. When possible, these differences are noted. Many veterinary and human texts are available for investigator use, as noted above.**

**A COMPENDIUM OF DRUGS USED FOR LABORATORY ANIMAL
ANESTHESIA, ANALGESIA, TRANQUILIZATION AND RESTRAINT**
(Highlighted dosages are those commonly used)

ACEPROMAZINE – see acetylpromazine

ACETAMINOPHEN (Tylenol, Datril)

Class Aminophenol derivative analgesic, antipyretic
Source Over the counter

Cat	DO NOT USE
Dog	15 mg/kg PO²⁰
Gerbil	100-150 mg/kg PO ²³⁴
Goat	300 mg/kg PO ¹⁴⁷
Guinea Pig	87 mg/kg PO ²³⁴
Mouse 1	110-135 mg/kg PO IP ¹²
Mouse 2	300 mg/kg IP ^{2, 37}
Primate	10 mg/kg PO ¹
Rabbit 1	1.0-2.0 mg/ml in drinking water ²³³
Rabbit 2	200-500 mg/kg PO ²³³
Rabbit 3	1.0 ml with codeine elixir (2.4 mg/ml) in 10-20 ml drinking water. Add dextrose to enhance palatability. ²³³
Rat	110-305 mg/kg PO, IP ¹² . See comments

Dosage Frequency

Dog	8 hours ²⁰
Gerbil	4 hours ²³⁴
Mouse 1	4 hours ¹¹
Primate	8 hours ¹
Rat	4 hours ^{11, 110}

Antagonist

Acetylcysteine (q.v.) for toxicity

Comments

All	Empirically, may cause hepatotoxicity in combination with pentobarbital.
All	Poorly water soluble
Rat	Not effective at any oral dose or flavor ²¹⁷

Rabbits Low grade analgesia²³³

ACETYLCYSTEINE (Mucomyst, Mucosol)

Class Acetaminophen toxicity antidote

Source Bristol, Dey, generic

Cat 140 mg/kg PO, IV then 70 mg/kg every 4 hours for 7 more doses⁷²
Dog 140 mg/kg PO, IV then 70 mg/kg every 4 hours for 7 more doses⁷²

Dosage frequency

See under "dose"

Comments

All Bad taste. May have to intubate⁷²

ACETYLPROMAZINE (Acepromazine, Promace)

Class Phenothiazine tranquilizer (α -1 antagonist)

Source Generic, Fort Dodge Laboratories, Tech America

Bird	0.5-1.0 mg/kg IM ¹⁴⁷
Calf 1	0.04-0.09 mg/kg IV ²¹ . 25 mg maximum in adult cattle for preoperative tranquilization ⁵⁹
Calf 2	0.1 mg/kg IM ²⁰
Cat 1	0.1-0.3 mg/kg IM, SC, IV ⁶ . 0.5 mg/kg IM ³⁷
Cat 2	0.03-0.05 mg/kg IV, IM ²⁰
Dog 1	0.1 mg/kg IM, SC, IV 15 minutes to 4 hours before anesthesia with maximum of 3 mg. Maximum 0.02-0.05 mg in aged animals ¹ . See comments.
Dog 2	See Butorphanol
Ferret 1	0.2-0.5 mg/kg SC, IM ¹¹⁶
Ferret 2	0.1-0.25 mg/kg IM, SC ²³²
Gerbil	Do Not Use ^{148,175}
Goat	0.04-0.06 mg/kg IM, IV ²⁰
Guinea Pig	0.75-2.0 mg/kg IM, SC ¹⁴⁷
Hamster	0.5-2.0 mg/kg IM ¹⁴⁷ , SC ¹⁷⁵
Mouse 1	2-5 mg/kg IP ²⁰
Mouse 2	0.5-2.5 mg/kg SC, IM ¹⁷⁵
Primate 1	0.2 mg/kg IM ^{20,37} , SC ¹⁴⁷
Primate 2	0.55 mg/kg (IM?) ¹¹¹
<u>Rabbit</u>	<u>1 mg/kg IM²⁰, SC¹⁴⁷</u>
Rabbit 2	5 mg/kg IM ²¹

Rabbit 3	0.1-0.2 mg/kg IV ²¹
Rat 1	1 mg/kg IM ²⁰⁻³⁷
Rat 2	0.5-2.5 mg/kg IM, SC ¹⁷⁵
Sheep	0.04-0.06 mg/kg IM, IV ²⁰
<u>Swine 1</u>	<u>1.1-2.2 mg/kg IM²⁰, IV, SC²⁴⁰</u>
Swine 2	0.02-0.07 mg/kg IV ²¹ . IV not a recommended route ²²²
Swine 3	0.1-0.2 mg/kg IM, SC, IV ¹⁴⁸ . IV not a recommended route ²²²

Dosage frequency

Cat 1	4 hours ²²⁰
Dog 1	Up to 48 hours ⁵⁵ , 1-2 hours ⁷⁰ , 4 hours ²²⁰
Primate	2 hours ⁷²
Rabbit 2	20-30 minutes ¹¹⁰

Antagonist

Phenylephrine (q.v.)

Comments

All	Antiarrhythmic, hypotensive, hypothermic
All	Antagonizes central dopamine receptors.
Dog 1	See also oxymorphone, butorphanol and proprenorphine. Causes vasodilation
Calf 1	Can increase risk of regurgitation during anesthesia. ¹³⁵
Ferret 1	Hypotensive, hypothermic ²³²
Primate 1	Can increase risk of regurgitation during anesthesia. ¹³⁵

ACETYLSALICYLIC ACID (Aspirin)

<i>Class</i>	NSAID salicylate analgesic for mild to moderate musculoskeletal pain
<i>Source</i>	Widely available generic and brand name (oral)

Cat	10 mg/kg PO ²⁰ . See duration of effect and comments.
Cattle	20-100 mg/kg PO ⁷²
Dog	10 mg/kg PO ²⁰ , 10-20 mg/kg PO ⁷² . See duration of effect.
Ferret 1	200 mg/kg PO ¹¹⁶
Ferret 2	10-20 mg/kg SC ²³²
Gerbil	240 mg/kg PO ²²³
Goat 1	50-100 mg/kg PO ²⁰
Goat 2	10-20 mg/kg PO ¹⁴⁸
Guinea Pig 1	20 mg/kg SC ²
Guinea Pig 2	86 mg/kg PO
Guinea Pig 3	270 mg/kg IP ¹⁴⁸
Hamster	240 mg/kg IP ¹⁴⁸ , PO ²²³
Mouse 1	400 mg/kg SC ¹¹⁷
Mouse 2	20 mg/kg SC ²
Mouse 3	120-300 mg/kg PO ²⁰
Primate 1	10-20 mg/kg PO ^{1,37}

Primate 2	325 mg/adult Old World animal ¹¹⁸
Primate 3	125 mg/5 kg rectal suppository ²¹⁹
Rabbit 1	100 mg/kg PO ^{11, 110} . See comments
Rabbit 2	500 mg/kg PO ²⁰
Rabbit 3	10 mg/kg PO ¹²⁰
Rabbit 4	1-20 mg/kg SC ²¹⁸
Rat 1	20 mg/kg SC ³
<u>Rat 2</u>	<u>110-120 mg/kg PO¹²</u>
Rat 3	450 mg/kg PO ⁸¹
Sheep 1	50-100 mg/kg PO ²⁰
Sheep 2	10-20 mg/kg PO ¹⁴⁸
Swine	10-20 mg/kg PO ³

Dosage frequency

Cat	12 hours ¹²⁰ , <u>48 hours (detoxification time)</u> ¹³³
Cattle	12 hours ⁷²
Dog	12 hours ¹⁴⁸
Ferret	Once daily ²³²
Gerbil	Once daily ²²³
Goat 1	12 hours ²⁰
Guinea Pig 1	4 hours ¹¹
Guinea Pig 2	6 hours ^{1, 37}
Guinea Pig 3	Once daily ²³³
Hamster	4 hours ¹⁵⁷ Once daily ²³³
Mouse 1	4 hours ¹¹
Mouse 2	4 hours ¹¹⁰
Primate 1	4 hours ¹¹
Mouse 2	4 hours ¹¹⁰
Primate 1	4 hours ¹⁰
Primate 2	4 hours ¹⁰
Rabbit 1	6-8 hours ²⁰ . Dosing every 12 hours probably safer.
Rat 2	4 hours ²⁰
Sheep 1	12 hours ²⁰
Swine	4-6 hours ²²¹

Comments

All	Can impair blood clotting
All	For mild to moderate pain. Not for visceral or sharp, intense pain. ¹⁰
All	Not readily water soluble
Cat	Not recommended for cats¹³³
Hamster	Readily consume children's aspirin with a little coaxing ¹⁵⁷
Rabbit 3	Bleeding tendency in 33% of rabbits given 50 mg/kg PO for three days ²³³

ALCURONIUM

Class Nondepolarizing neuromuscular blocking agent
Source Roche (Not available in U.S.)

Cattle 0.08 mg/kg. Route not specified⁵⁹
Dog 0.1 mg/kg. Route not indicated³⁷

Dosage frequency

Antagonist

Edrophonium (q.v.)
Neostigmine (q.v.)
Pyridostigmine (q.v.)

ALFENTANYL (Alfenta)

Class Opioid analgesic. **Controlled substance.**
Source Janssen

Rabbit 0.03-0.07 mg/kg IV¹⁷
Rat 0.044 mg/kg IV⁵⁴
Mouse 0.05-1.5 mg/kg IP²¹⁷

Dosage frequency

Mouse 15 minutes²¹⁷
Rabbit 45 minutes¹⁷

Antagonist

Naloxone (q.v.)

Comments

All Can give by continuous infusion³⁷

ALPHAXALONE (9 MG/ML)/ALPHADALONE (3 MG/ML) (Saffan, Althesin)

See Comments

Class Steroid sedative, analgesic, anesthetic
Source Available in Canada and Europe

Bird 8.0 mg/ kg IV in incremental doses to 25 mg/kg maximum¹⁴⁸
Cat 1 9 mg/kg IV. Anesthesia. Can also give by continuous infusion of 03.2 mg/kg/minute³⁷
Cat 2 9 mg/kg IM. Light sedation³⁷
Cat 3 12-18 mg/kg IM¹²¹ then 3.0 mg/kg IV as needed¹⁴⁸
Dog **Do Not Use¹⁴⁸**
Ferret 1 6.0-8.0 mg/kg IM (preanesthetic)¹¹⁶
Ferret 2 12-15 mg/kg IM (anesthesia)¹¹⁶ Light sedation²²⁰
Ferret 3 10-12 mg/kg IV (anesthesia)²²⁰
Gerbil 1 20 mg/kg SC¹¹⁹

Gerbil 2	450 mg/kg PO ¹¹⁹
Gerbil 3	80-120 mg/kg IP. Sedation/anesthesia. See comments ³⁷
Guinea Pig 1	20 mg/kg IV bolus anesthesia
Guinea Pig 2	40 mg/kg IM ³⁷ or IP ¹³² immobilization
Guinea Pig 3	45 mg/kg IM, 20 minutes after 5.0 mg/kg diazepam IP ¹³²
Hamster 1	20 mg/kg SC ¹¹⁹
Hamster 2	150 mg/kg IP. Sedation/anesthesia. ³⁷ See comments.
Hamster 3	150 mg/kg IP. Immobilization and anesthesia ¹⁷⁷
Hamster 4	240 mg/kg PO ¹¹⁹
Mouse 1	120 mg/kg IP ⁸² See comments
Mouse 2	5.0 mg/kg IV then as needed to maximum of 20 mg/kg ¹⁴⁸
Mouse 3	10-15 mg/kg IV ³⁷ . Surgical anesthesia. Follow with 4-6 mg/kg every 15 minutes as needed ⁸²
Primate 1	<i>Rhesus.</i> 0.2 mg/kg/minute after induction with ketamine (q.v.) ¹⁸³
Primate 2	10-12 mg/kg IV ³⁷ anesthesia
Primate 3	12-18 mg/kg IM. Sedation ³⁷ then 6.0-9.0 mg/kg IV as needed
Primate 4	<i>Marmoset.</i> 0.1-0.15 ml/100 grams IM ¹²²
Primate 5	<i>Callithrix.</i> 15-19 mg/kg IM ²¹⁹
Primate 6	<i>Baboon.</i> 0.2 mg/kg/minute after induction with ketamine (q.v.) ¹¹¹
Rabbit 1	9-12 mg/kg IM. Sedation. ³⁷ Not recommended for anesthesia ³⁷
Rabbit 2	10-20 mg/kg IV. Sedation only. Not recommended for anesthesia ^{102, 157}
Rabbit 3	12 mg/kg IV. Light anesthesia ¹¹¹
Rat 1	9-12 mg/kg IP for preanesthesia ³⁷
Rat 2	10-12 mg/kg IV for surgical anesthesia ³⁷
Rat 3	6.0-9.0 mg/kg IV for surgical anesthesia ³⁷
Sheep	2.2 mg/kg IV for adults. 6.0 mg/kg IV for lambs. Can be administered by continuous infusion ³⁷
Swine 1	1.0-2.0 mg/kg IV. Anesthesia. Can use continuous infusion ³⁷
Swine 2	6.0 mg/kg IM ³⁷ . Sedation

Dosage Frequency

Cat 2	10 minutes ³⁷
Cat 3	15-30 minutes ¹²¹
Ferret 2	15-30 minutes ²²⁰
Ferret 3	10-15 minutes ²²⁰
Gerbil 1	75 minutes ¹³²
Guinea Pig 1	49-90 minutes ¹³²
Guinea Pig 2	10-12 minutes ¹³²
Guinea Pig 3	60 minutes ¹³²
Hamster 1	120-150 minutes ⁸³
Hamster 4	20-60 minutes ¹⁷⁷
Mouse 2	5 minutes ¹⁷⁷
Primate 2	15 minutes ³⁷
Primate 4	2 hours ¹²²
Primate 5	1 hour ²¹⁹

Rabbit 1	5-10 minutes ¹⁷⁷
Rabbit 2	8-10 minutes ¹¹¹
Rat 2	5 minutes ¹⁷⁷
Sheep	10 minutes ¹²⁴
Swine 2	<30 minutes ⁶¹

Comments

All	Dosage based on 12 mg/ml total steroid content
Gerbil 1-3	High mortality possible ³⁷
Mouse	LD ₅₀ is 180-200 mg/kg IP ⁸² . Poor analgesia ⁸² Can cause death ³⁷
Rabbit 1-3	Poor safety margin ¹⁰²
Rat 1	Variable effects. Low analgesia. Consider use of atropine ³⁷
Rat 2	Can give by continuous infusion ³⁷

4-AMINOPYRIDINE

Class Droperidol antagonist

Source

Dog	0.5 mg/kg IV ⁷²
Primate	0.73 mg/kg IV (ED50) ²¹⁶

ATIPAMEZOLE (Antisedan)

Class α_2 -adrenoceptor antagonist

Source Pfizer, Farmos Group Ltd.

Bird	Five times the medetomidine dose ¹⁴⁷
Calf 1	Five times medetomidine dosage (w/w), divided IV and SC. Can also be used if ketamine is used with medetomidine ⁴⁷
Calf 2	1 mg/10mg xylazine. Route not noted ⁴⁷
Dog 1	0.04 mg/kg IV ⁴⁵
Dog 2	0.4-0.6 mg/kg IM ⁷⁰
Dog 3	5000 μ g/m ² IM ⁹³
Ferret	400 mg/kg. Route? ²³²
Fish	0.2 mg/kg IM ¹⁴⁷
Gerbil	0.1-1.0 mg/kg IP, IV, IM, SC ²³⁴
Goat 1	20-60 mg/kg IV
Goat 2	0.2 mg/kg IV ²²¹
Goat 3	0.06 mg/kg IM, SC ²²¹
Guinea Pig	1.0 mg/kg SC ¹⁴⁷
Hamster	0.1-1.0 mg/kg IP, IV, IM, SC ²³⁴
Mouse	1.0-2.5 mg/kg IP ²³⁴
Primate 1	Three times medetomidine dosage (w/w), divided IV and SC. Can also use if ketamine is used with medetomidine ⁴⁷
Primate 2	Squirrel monkey. 200 μ g. Route? ²¹⁹
Rabbit 1	1.0 mg/kg IM ¹⁴⁷
Rabbit 2	1.0 μ g/kg SC, IP, IV ²³³

Rat	1.0 mg/kg IP ⁹⁰ , SC
Sheep 1	20-60 mg/kg IV
Sheep 2	0.2 mg/kg IV ²²¹
Sheep 3	0.06 mg/kg IM, SC ²²¹
Swine 1	0.2 mg/kg IV ¹⁸²
Swine 2	1.0 mg/kg IM, SC, IV ²⁴⁰

Comments

Dog 1	Administer slowly intravenously ⁴⁵
Swine 1	Can cause tachycardia ¹⁸²

ATRACURIUM (Tracrium)

<i>Class</i>	Nondepolarizing neuromuscular blocking agent
<i>Source</i>	Burroughs Wellcome

Bird	<i>Chicken</i> 0.46 mg/kg IV ²¹⁶
Cat 1	0.125-0.250 mg/kg IV ^{56, 216} See comments
Cat 2	Infusion 3.7 µg/kg/min ²¹⁶
Dog 1	0.22 mg/kg IV ⁷² See comments
Dog 2	0.125 mg/kg IV (ED95) ²¹⁶
Primate 1	0.25-0.3 mg/kg ²¹⁶
Primate 2	Infusion (ED50) 1.5 µg/kg/min ²¹⁶
Rabbit 1	0.1 mg/kg. Route? ²³³
Rabbit 2	Infusion 0.004-0.01 mg/kg/hr ²¹⁶
Sheep	4.0-7.0 µg/kg/min for one hour ^{56, 135}
Swine 1	2.0 mg/kg IV ²¹⁶
Swine 2	Infusion 0.12 mg/kg/min ²¹⁶

Dosage Frequency

Cat 1	23 minutes ^{56, 216}
Dog 1	20 minutes ^{50, 216}
Primate	20 minutes ²¹⁶
Sheep	20-30 minutes ¹³⁵

Antagonist

Edrophonium (q.v.)	
Neostigmine (q.v.)	
PHysostigmine ⁷²	
Pyridostigmine ⁵⁰ (q.v.)	

Comments

Cat	Give 1/10 to 1/6 of dose, followed by remainder in 5 minutes ⁷²
Dog	Give 1/10 to 1/6 of dose, followed by remainder in 5 minutes ⁷²

AZAPERONE (Stresnil). No longer available.

<i>Class</i>	Butyrophenone tranquilizer
<i>Source</i>	
Opossum 1	1.0-2.0 mg/kg IM ⁴⁰
Opossum 2	2.0-4.0 mg/kg IM prior to local anesthesia ⁴⁰
Opossum 3	2.0 mg/kg IM prior to general anesthesia ⁴⁰
Swine 1	2.2 mg/kg IM ³ , 5 mg/kg IM ³⁷ . Higher dose for heavier sedation.
Swine 2	5.0 mg/kg IM with metomidate 10 mg/kg IM. See comments ^{20, 37}
Swine 3	4.0 mg/kg IM with diazepam 0.5 mg/kg IM. Sedation ¹¹¹
Swine 4	4.0 mg/kg IM then ketamine 30 mg/kg IM with maximum of 10 ml of ketamine (100 mg/ml) ¹⁸⁶
Swine 5	2.0 mg/kg IM with etomidate 4.0-8.0 mg/kg IV ²²¹
<i>Dosage Frequency</i>	
Opossum 1	1-2 hours young, 3-4 hours adults. Peak effect in 15 minutes for young, 30 minutes for adults ⁴⁰
Swine 1	15-30 minutes ²²¹
<i>Comments</i>	
Swine 1	See use with meperidine
Swine 2	Suitable for minor surgical procedures ^{20, 37}

BENZOCAINE (Cetacaine)

<i>Class</i>	Topical anesthetic [ethyl p-aminobenzoate]
<i>Source</i>	Cetylite Industries, Beulitch, Fisons

Amphibian 1	Adult 200-300 mg/liter ¹⁴⁸
Amphibian 2	Larvae 50 mg/liter, dissolved in ethanol ¹⁴⁸
Fish 1	Channel catfish 25- 25-70 mg/liter ¹²³
Fish 2	Goldfish 25-70 mg/liter ¹²³
Fish 3	Striped bass 50 mg/liter ²³⁵
Rabbit	Not recommended ²²³

Comments

All	Can cause methemoglobinemia in rats, mice, ferrets, rhesus monkeys, cynomolgus monkeys, owl monkeys, rabbits, miniature swine ⁶⁹
-----	---

BUPIVACAINE (Marcaine, Sensorcaine)

<i>Class</i>	Local anesthetic
<i>Source</i>	AstraZeneca, Eastman Kodak

Cat 1	1.0 ml/4.5 kg of 0.75% ⁹
Cat 2	0.15 ml of 0.5% intrapleural ¹⁶¹
Dog 1	1.0 ml/4.5 kg of 0.75% ⁹
Dog 2	0.3 ml of 0.5% intrapleural ¹⁶¹
Dog 3	0.5% at 1.0 ml/10cm distance from lumbosacral space (epidural) ¹⁹²

Dog 4	0.5% with 0.1 mg/ml preservative free morphine, at 0.1 mg/kg BW. Epidural ¹⁹²
Rat 1	0.125% solution as local infiltration ⁵¹
Rat 2	3.0 mg/kg for infiltration ²¹⁰

Dosage Frequency

Dog 1	1-3 hours ⁹ , 4-6 hours ¹³³
Cat 1	1-3 hours ⁹ , 4-6 hours ¹³³

Comments

All	Used by many post-thoracotomy
Cat 1	3-4 times more potent than lidocaine
Dog 1	3-4 times more potent than lidocaine

BUPRENORPHINE (Buprenex)

Class Analgesic, opiate antagonist/agonist. **Controlled substance.**

Source Reckitt & Colman, Norwich Eaton

Bird 1	0.05 mg/kg SC, IM ¹⁴⁸
Bird 2	<i>African gray parrot</i> Not effective at 0.1 mg/kg IM ²³⁰
Calf	0.005 mg/kg IV ¹⁶⁴
Cat	0.005-0.01 mg/kg IV, SC ²⁰ , IM ³⁷
Dog 1	0.01-0.03 mg/kg IM ⁹ , SC, IV ²⁰
Dog 2	0.009 mg/kg IM with acetylpromazine 0.07 mg/kg IM. Moderate to deep sedation. Preanesthesia ³⁷
Dog 3	0.0075-0.01 mg/kg IV with acetylpromazine 0.03 mg/kg IV ⁷⁰
Ferret 1	0.01-0.03 mg/kg SC, IM, IV ⁷⁶
Ferret 2	0.05-0.1 mg/kg SC, IM, IV ¹³⁰
Gerbil 1	0.1-0.2 mg/kg SC ¹¹⁹

Rat 1	2-4 hours ¹⁰
Rat 2	4 hours ¹¹⁰
Sheep 2	2-4 hours ^{19, 41}
Sheep 4	4-6 hours ¹⁹
Sheep 5	25-50 minutes ¹⁰¹
Swine	4 hours ³

Antagonist

Naloxone (q.v.)

Comments

All	30x more potent than morphine in rats
All	Not a controlled rug
All	Increases arterial pressure
All	Causes sedation
All	Do not use with pentobarbital ⁷²
All	Stadol: 1 mg or tartrate salt = 0.68 mg of base ⁷²
Cat 1	Best for moderate visceral pain. Can cause irritability or excitement. Somatic analgesia with higher dosage in cats ²⁰ .
Cattle	IV dosage may cause excitement ²²¹
Dog 1	Use lower dose (0.05 mg/kg) if acetylpromazine used as preanesthetic.
Dog 1, 2	Best for moderate visceral pain, but oxymorphone is preferred ²⁰
Dog 4	Can combine in same syringe ⁷⁰
Goat 1, 2	May cause excitement ¹³⁵ , especially IV ²²¹
Sheep 2, 3	May cause excitement in sheep ¹³⁵ , especially IV ²²¹

CARBON DIOXIDE

Class Anesthetic, euthanasia agent
Source Medical gas companies

Most animals 40-60% in air or oxygen

Antagonist

Oxygen. Not true antagonist.

Comments

All	Use only for procedures of one to two minutes. Generally not satisfactory for anesthesia and can cause pulmonary hemorrhage
All	Most humane as euthanasia agent when chamber is slowly filled with 100% carbon dioxide.

CARFENTANIL (Wildnil)

Class Opioid analgesic. **Controlled substance**
Source Wildlife Laboratories, Inc. (Ft. Collins, CO)

Rat 0.32 µg/kg IV⁵⁴
Mouse 0.003 mg/kg IM with etomidate 15 mg/kg IM¹³²

Antagonist

Naloxone

CARPROFEN (Rimadyl)

Class Arylpropionic acid derived non-steroidal anti-inflammatory and analgesic.
Source Pfizer. *Only available in table form in U.S.*

Bird	1-4 mg/kg IM ²⁷⁷
Cat 1	2-4 mg/kg SC, IV single dose ²²⁷

Hamster	270-360 mg/kg IP ²⁸ . See comments
Mouse 1	114 mg/kg IP ²⁸ . See comments
Mouse 2	370-400 mg/kg IP ²⁸ . See comments
Mouse 3	C57BL/6J 480 mg/kg IP ⁸²
Mouse 4	60-90 mg/kg IP ²¹⁷
Rabbit 1	200 mg/kg IV ²⁸ . See comments
Rabbit 2	250 mg/kg IV with ketamine 20 mg/kg IV, IM ⁸ Anesthesia <u>350-450 mg/kg IP² of 5% solution. See comments</u>
<u>Rat 1</u>	400 mg/kg PO ²⁸ . See comments
Rat 2	34 mg/kg IP with 149 mg/kg pentobarbital IP. Maintain anesthesia at 7.8 mg/kg IP chloral hydrate and 34 mg/kg pentobarbital IP given no sooner than 30 minutes after first dose. ⁹⁷
Rat 3	
Rat 4	<i>Equithesin</i> combine 2.1 grams of MgSO ₄ .1H ₂ O, 44.3 ml propylene glycol, 4.25 grams chloral hydrate, 0.98 grams sodium pentobarbital, 9.9 ml 95% ethanol and sterile water to volume. Heat to 30-35°C. while stirring. Filter small amounts through a 0.22μ filter and store in a sterile glass vial with a rubber stopper. For anesthesia induction, dose at 3.0-3.6 ml/kg IP, which contains 30-36 mg/kg of pentobarbital and 125-150 mg/kg of chloral hydrate. For anesthesia maintenance, use 0.3 ml IP as needed. ²¹⁴
Sheep 1	50-300 mg/kg IV ¹⁴⁸
Sheep 2	50-70 mg/kg IV for sedation ²²¹
Swine 1	730 mg/kg IV ²¹ . See comments
Swine 2	100-300 mg/kg IV ¹⁴⁸

Dosage Frequency

Calf	30-40 minutes ⁵⁹
Dog	70-85 minutes ²¹ 60-136 minutes, dose dependent ¹⁰³
Rabbit 2	3 hours ⁸⁰ , 20 minutes ¹³²

Rat 1	2 hours ²¹ , 65 minutes (300 g/kg IP) ⁶⁷ , 111 minutes (400 mg/kg IP) ⁶⁷ , 137 minutes, (450 mg/kg IP) ⁶⁷
<i>Comments</i>	
All	Poor analgesia often reported, although reference 67 claims good analgesia
All	Premedicate with thiobarbiturates, opioid or α-2 agonist for improved analgesia and easier recovery
Calf	33% solution. 125-150 ml maximum ²¹
Dog	Good anesthesia reported ¹⁰³ Consider using atropine ²¹
Rabbit 2	No apparent side effects ⁸⁰
Rat 1	40 mg/kg if needed to maintain anesthesia ²¹ Can cause gastric ulcers. Not recommended for survival surgery²¹ . 40 mg/ml minimizes abdominal organ irritancy compared to 80 mg/ml ^{215, 270}

CHLORALOSE (α-chloralose)

Class Hypnotic
Source Sigma Chemical, Aldrich Chemical

Calf	35-62 mg/kg IV ²¹
Cat	75 mg/kg IV ²¹ See comments
Dog 1	80-110 mg/kg IV, 1% solution ²¹ See comments
Dog 2	60 mg/kg IV ²¹ Light anesthesia only. See comments
Dog 3	50 mg/kg IV with thiopental 15 mg/kg IV for induction ²¹ . See comments
Dog 4	80 mg/kg IV with thiopental 5 mg/kg IV for induction ²¹ . See comments
Dog 5	80 mg/kg IV. Preanesthetize with morphine 5 mg/kg SC ²¹ See comments
Dog 6	Continuous infusion of 29.25 mg/kg/hr IV ¹⁸⁷
Guinea Pig 1	0.8 ml/100 g of 1% solution with urethane 40 percent in a 7:1 mixture. All IP ¹³²
Guinea Pig 2	70 mg/kg IV ¹⁴⁷
Hamster	80-199 mg/kg IP ² Sedation only. See comments
Mouse	114 mg/kg IP ²⁸ of 5% solution
Primate	60 mg/kg IV ¹⁴⁷
Rabbit 1	80-100 mg/kg IV (2% in propylene glycol) ²¹
Rabbit 2	10 grams/liter saline. Dose at 80 mg/kg with 500 mg/kg urethane (in liter of saline). Slow IV ²¹⁸
Rat 1	30-50 mg/kg IP ² See comments
<u>Rat 2</u>	<u>100 mg/kg IP (2% in propylene glycol)²¹ Light anesthesia. See comments</u>
Sheep, Goat	42-60 mg/kg IV ¹⁴⁸
Swine 1	55-86 mg/kg IV ³ . Alone or with preanesthetic ²¹

Swine 2	100 mg/kg IV ¹¹¹
Swine 3	50 mg/kg IV preceded by halothane induction ²¹
Swine 4	See Droperidol and Propofol

Dosage Frequency

Calf	1 hour ²¹
Cat	5-19 hours ^{21,37}
Dot 1-6	5-10 hours ^{21,37}
Guinea Pig 1	>2 hours ¹³²
Rabbit 1	30 minutes ¹³²
Rabbit 2	5-10 hours ^{21,37}
Rat 2	8-10 hours ¹⁷⁷

Comments

All	Solution must be properly prepared
All	Poor analgesia
All	Premedicate with thiobarbiturate, α -2 agonist or opioid
All	May result in adynamic ileus, peritonitis when given IP
All	Does not show classical signs of anesthesia
Dog 5	See urethane
Guinea Pig 1	May cause severe peritonitis IP
Hamster	May cause severe peritonitis IP
Mouse	May cause severe peritonitis IP
Rat 1, 2	May cause severe peritonitis IP
Swine 1	See droperidol
Swine 2	Depresses carotid chemoreceptor stimulation ²¹

Rabbit 1	1.0 mg/kg IM, IP ²⁸ See comments
Rabbit 2	4.0 mg/kg IM, IP ³⁷ See comments
Rabbit 3	5-10 mg/kg IM ⁸⁰ See comments
Rabbit 4	20 mg/kg IV ³⁷
Rabbit 5	1.0 mg/kg IV ¹¹⁰
Rat 1	2.0 mg/kg IV ³⁷
<u>Rat 2</u>	<u>2.5 mg/kg IP²⁸</u>
Rat 3	4.0 mg/kg IM, IP ³⁷ See comments
Rat 4	2.0 mg/kg 5-15 mg/kg SC ¹³² Sedation ²¹⁷
Sheep 1	2.0 mg IM ³⁷ See comments
Sheep 2	15 mg/kg PO in food ¹⁴⁸
Sheep 3	1.0 mg/kg IV ³⁷
Sheep 4	0.2-0.5 mg/kg IV ²²¹ prior to ketamine ⁵⁹
Swine 1	2 mg/kg IM ³⁷ See comments
Swine 2	0.5-1.5 mg/kg IV ¹⁴⁸
Swine 3	0.5-10.0 mg/kg IM ²²¹
Swine 4	1.0 mg/kg/hr IV infusion ²⁴⁰
Swine 5	0.2-0.3 mg/kg per rectum ²⁵⁴ Sedation
Swine 6	0.1-0.2 mg/kg PO ²⁵⁴ Sedation

Dosage frequency

Cat 2	12 hours ⁷²
Dog 3	12 hours ⁷²
Goat 3	30-60 minutes (without Ketamine) ¹³⁵
Hamster 2	20 minutes ⁵³
Rabbit 5	2-6 hours ¹¹⁰
Sheep 3	30-60 minutes (without Ketamine) ¹³⁵
Swine 2	2 hours ²²¹
Swine 3	2-4 hours ²²¹

Antagonist

Flumazenil (q.v.)²²

Comments

All	Minimal cardiac depression. Hypotension in high doses.
All	Can be painful IM ²⁰ or SC. Give by deep IM if you must give IM
Dog 2	See "oxymorphone" and ketamine"
Guinea Pig 3	May see apprehension and pruritis in sows
Rabbit 1-4	And see listing under "ketamine." Can stimulate appetite up to 30 minutes

DICLOFENAC (Cataflam, Voltaren)

Class Phenylacetic acid NSAID analgesic

Source Novaris, Roxane

Mouse 1	14-100 mg/kg PO ²¹⁷
Mouse 2	8.0 mg/kg PO ²²⁶
Guinea Pig	2.1 mg/kg PO ²²⁶
Rat	10 mg/kg PO ²²⁶

Dosage frequency

Guinea Pig 3	24 hours ²⁷⁷
Mouse 2	24 hours ²⁷⁷
Rat	24 hours ²⁷⁷

Comments

All	Possible gastrointestinal ulceration and bleeding ²²⁶
-----	--

DIPRENORPHINE (Revivon)

<i>Class</i>	Etorphine antagonist
<i>Source</i>	C-Vet

Cattle	Twice the etorphine dose ⁶²
Dog	0.5 ml/kg IV ³⁷
Goat	Twice the etorphine dose ⁶²
Sheep	Twice the etorphine dose ⁶²

DOXACURIUM (Nuromax)

<i>Class</i>	Nondepolarizing skeletal muscle relaxant
<i>Source</i>	Glaxo Wellcome

Swine	0.01 mg/kg IV ²¹⁶
-------	------------------------------

DROPERIDOL (Inapsine)

<i>Class</i>	Butyrophenone tranquilizer
<i>Source</i>	Janssen

Guinea Pig	2.5 mg/kg IM ¹¹¹
Primate	<i>Ape</i> 2.0-3.0 mg/kg PO ¹⁴⁷
Rat	0.5-2.0 mg/kg ¹³² SC ²¹⁷ Sedation ²¹⁷
Swine 1	0.1-0.4 mg/kg ⁷⁵ IM ²⁶⁹
Swine 2	2.0 mg/kg IM, followed by 50µg IV of flunitrazepam in 30 minutes. Then 10 minutes later, chloralose 60 mg/kg IV and maintenance dose of 20 mg/kg/hr IV. ⁷⁷

Antagonist

4-aminopyridine (q.v.)

EDROPHONIUM (Tensilon, Enlon, Reversol)

<i>Class</i>	Antagonist of nondepolarizing neuromuscular blocking agents
<i>Source</i>	Anaquest, ICN Pharmaceuticals, Baxter, Organon

Cat 1	0.1-0.2 mg/kg IV
Cat 2	0.25-0.5 mg/kg IV ²¹⁶
Dog	0.1-0.2 mg/kg IV

Comments

Dog	Precede by atropine 0.04 mg/kg IV
Cat 1	Precede by atropine 0.04 mg/kg IV

ENFLURANE (Ethrane)

Class Halogenated Ether Anesthetic

Source Anaquest

All Species	3-5% induction, 1-3% maintenance ³⁷ Rarely need more than 3.5% in dogs and cats. ⁶⁰
Dog	See comments
Goat	See comments
Sheep	1-2% in oxygen, preceded by ketamine 22 mg/kg IM. ⁹⁶
Swine	Do Not Use. See comments

Dosage frequency

As long as gas is supplied

Antagonist

Oxygen (not a true agonist)

Comments

All	Waste gas must be scavenged.
All	Respiratory and cardiovascular depression ³⁷
Dog	Respiratory depression and acidosis. No cardiovascular effect ¹¹¹
Goat	Respiratory depression requires artificial ventilation. Good anesthesia ¹⁰⁸
Swine	Moderate fall in blood pressure and respiratory rate ¹¹¹ Can cause seizures ²²¹

ETHER

Class Inhalant Anesthetic

Source Sigma Chemical

All species	Induction 10-20%, Maintenance 4-5%. ³⁷ To effect, usually by placing animal in closed container for induction, then using face mask. See comments.
Guinea Pig	DO NOT USE
Rabbit	See comments

Dosage frequency
As long as gas is supplied

Antagonist

Oxygen (not a true antagonist)

Comments

All	Explosive.
All	Respiratory tract irritant.
All	Can cause cardiac arrest at high concentrations.
All	Stimulates catecholamine release ³⁷
Rabbit	Can cause laryngospasm. Hold breath and may have cardiac depression ⁸⁰

ETHYLISOBUTRAZINE (Diquel)

Class Phenothiazine tranquilizer
Source Coopers

Dog 1	4.4-11 mg/kg IM, PO ⁷²
Dog 2	2.2-4.4 mg/kg IV ⁷²
Swine 1	1.25 mg/kg IV ²²²
Swine 2	2.2-4.4 mg/kg IM ²²²

Dosage frequency
Dog 1 6-72 hours. Dose dependent⁷²

ETOMIDATE (Amidate, Hypnomidate)

Class Non-barbiturate hypnotic
Source Abbott. Not available in U.S.

Cat	1.1-4.4 mg/kg IV ²¹ See Comments.
Dog 1	1.1-4.4 mg/kg IV ²¹
Dog 2	See "Medetomidine"
Fish 1	Channel catfish: 2-10 mg/liter (anesthesia) ¹²³
Fish 2	Tropical. 2-10 mg/liter (anesthesia) ¹²³
Guinea Pig	0.14 mg/kg IV ²⁸
Mouse 1	24-30 mg/kg IP ^{28, 85, 132} . Anesthesia ⁸²
Mouse 2	11.2 mg/kg IV ¹³²
Primate	0.5-2.0 mg/kg IV ²⁸² Anesthesia induction.
Rabbit	1.1-4.4 mg/kg IV ²¹
Rat	0.57-1.11 mg/kg IV ²⁸
Sheep	2.0 mg/kg IV ²²¹ Anesthesia.
Swine 1	1.1-4.4 mg/kg IV ²¹
Swine 2	4.0-8.0 mg/kg IV ²²¹ . See azaperone
Swine 3	0.6 mg/kg IV with ketamine infusion of 10 mg/kg/hr IV. Anesthesia ²⁴⁰

Dosage frequency

Dog 1, 2	5-10 minutes
Mouse 1	15 minutes ⁸²
Mouse 2	20 minutes ¹³²
Primate	20 minutes ²⁸²
Sheep	12 minutes ²²¹

Comments

Cat	For induction only. May cause vomiting. Use preanesthetics. ¹²¹ Minimal cardiopulmonary depression. ¹³³ Can cause decreased adrenocortical function. ¹⁹³
Primate	Minimal cardiac depression. ²⁸²
Sheep	Can have hypersalivation and hemoglobinemia. ²²¹

ETORPHINE WITH ACETYL PROMAZINE (Immobilon LA)

Class Narcotic immobilization agent/analgesic/sedative. **Controlled substance.**

Source Not available in US

Cattle	0.1 mg/kg IM, without acetyl promazine ¹⁴⁷
Goat	0.5 ml/50 kg IM ³⁷
Reptile	0.5-1.5 mg/kg IM without acetyl promazine ²⁷⁸
Sheep	0.5 ml/50 kg IM ³⁷
Swine	0.5 mg/50 kg IM. ³⁷ See comments.

Dosage frequency

Swine	20 minutes ²²¹
-------	---------------------------

Antagonist

Diprenorphine (q.v.)⁶²

Comments

Goat	For animals >30 kg ³⁷
Sheep	For animals >30 kg ³⁷
Swine	Immobilization and anesthesia. May be high mortality. ³⁷

ETORPHINE WITH METHOTRIMEPRAZINE (Immobilon SA)

Class Narcotic immobilization agent/analgesic/sedative. **Controlled substance.**

Source Lemmon (with diprenorphine), C-vet (with methotrimprazine). Not in US.

Cat	0.5 mg/4 kg IM ³⁷
Dog	0.5 mg/4 kg IM. ³⁷ See comments.
Goat	0.5 ml/4 kg for under 30 kg ³⁷
Rabbit	0.25-0.5 mg/kg IM. ³⁷ See comments.
Rat 1	0.5 ml/kg IM. ³⁷ Anesthesia.

Rat 2	0.5 ml/kg IM with midazolam (5 mg/ml) IM. 1:1 ratio. ³⁷ Anesthesia.
Sheep	0.5 ml/4 kg for under 30 kg ³⁷
Swine	24.5 mg/kg with diprenorphine (Revivon) 0.3 mg/kg ³
<i>Antagonist</i>	
Dog	Diprenorphine (q.v.) ⁶²
<i>Comments</i>	
Cat	Adequate for immobilization and minor surgery ³⁷
Dog	Adequate analgesia for minor to moderate surgery. Bradycardia (use atropine). ³⁷
Rabbit	Adequate for immobilization and minor surgery. ³⁷ Not recommended due to respiratory depression. ¹¹¹

EUGENOL (Clove Oil)

Class Fish anesthetic
Source Health food stores

Fish 40-100 mg/liter²⁷⁹

Comments

Fish Use 95% ethanol to create a stock solution of 100 mg/ml.
 Add to induction chamber water.²⁷⁹

FENOPROFEN (Nalfon)

Class Nonsteroidal anti-inflammatory analgesic
Source Dista, Lederle Standard, Mylan

Dog 0.5-1.0 mg/kg¹⁴⁸

Dosage frequency

Dog Every 24 hours¹⁴⁸

FENTANYL (Sublimaze) Often combined with Droperidol as INNOVAR-VET. **Do Not Use Human Formulation of Innovar.** Innovar-vet is no longer available.

Class Opioid containing neuroleptanalgesic, tranquilizer, mild anesthetic (α -adrenergic blocker). **Controlled substance.**
Source AstraZeneca, Elkins-Sinn, Abbott, Baxter, Janssen (transdermal patch)

Amphibian	(And see Frog). 1.0-2.0 mg/kg SC in dorsal lymph sac. ²⁷⁸
Cat 1	0.1 mg/kg IM. ²⁰ See comments.
Cat 2	20 mg/kg IV (without droperidol) with diazepam 0.5 mg/kg IV. Anesthesia induction.
Cat 3	25 µg/hour transdermal patch. ²⁴⁶

Cat 4	5.0-10.0 µg/kg epidural ²⁷⁷
Dog 1	0.02-0.04 mg/kg IM (<u>without droperidol</u>) ⁴ SC, IV ²²⁰
Dog 2	1 ml/10-20 kg IV as drip or given slowly, preanesthesia ⁴
Dog 3	1 ml/7-10 kg IM ⁶ with droperidol. Analgesia and tranquilization ⁷²
Dog 4	1 ml/15-30 kg with droperidol, slowly, IV ⁶ Anesthesia ⁷²
Dog 5	1 ml/18 kg IM with droperidol. Anesthesia ⁷²
Dog 6	20 mg/kg IV (<u>without droperidol</u>) with diazepam 0.5 mg/kg IV. Anesthesia induction.
Dog 7	<u>Without droperidol</u> . Oxymorphone 0.05 mg/kg, glycopyrrolate 0.02 mg/kg (premedication). Induce at 10-20 µg/kg IV with 0.1 mg/kg midazolam IV. Maintain with fentanyl 0.7-1.0 µg/kg/min IV and midazolam 0.35 µg/kg. Can use with isoflurane (0.5%) and atacurium (q.v.). ¹⁵¹
Dog 8	50 µg/hr transdermal patch for 1-3 days. ²²⁰
Dog 9	5.0-10.0 µg/kg epidural ²⁷⁷
Dog 10	0.001-0.005 mg/kg IV ²⁷⁷ or drip at 0.003-0.010 mg/kg/hour ²⁷⁷
Ferret 1	0.5 mg/kg IM ¹⁴⁸
Ferret 2	Not Recommended ¹⁷⁵
Frog	(<i>Rana pipiens</i>) 1.4 nmol/gram, dorsal lymph sac (<u>without droperidol</u>) ¹⁴⁸
Gerbil	0.3-0.5 ml/kg IM, SC ¹⁷⁵
Goat	2.0 ml/kg IM ¹⁴⁷
Guinea Pig 1	0.66-0.88 ml/kg IP ² , IM. ¹³² See comments.
Guinea Pig 2	1 ml/kg IP with diazepam 2.5 mg/kg IP ²
Guinea Pig 3	0.16 ml/kg IM. ²⁰ See comments.
Guinea Pig 4	0.32 mg/kg IM with diazepam 5.0 mg/kg IP given prior to Innovar-vet ²¹⁷
Hamster 1	Not satisfactory ²⁸
Hamster 2	1 ml/kg IP with diazepam 5 mg/kg IP ²
Hamster 3	0.9 ml/kg IM. Analgesia with unpredictable degree of sedation ¹⁷⁷
Hamster 4	0.9 ml/kg IM. Analgesia with unpredictable degree of sedation
Mouse 1	0.01-5.0 ml/kg IM. ²⁰ See comments. Immobilization and analgesia ¹⁷⁷
Mouse 2	2.0-5.0 ml/kg of 1:10 dilution, IM, SC ¹⁷⁵
Primate 1	0.002 mg/kg IM, IV (analgesia, <u>without droperidol</u>) ¹
Primate 2	(<i>Ape</i>) 0.02 mg/kg IM (<u>without droperidol</u>) ¹⁴⁷
Primate 3	(<i>Ape</i>) 0.00008 IV (<u>without droperidol</u>) ¹⁴⁷
Primate 4	0.05-0.1 mg/g IV, IM ²⁰
Primate 5	0.1-0.2 mg/kg IM. ²⁰ See comments.
Primate 6	<i>Baboon, mangabey, pigtail macaque</i> 0.3-2.2 mg/kg IM ²⁰
Primate 7	<i>Macaque</i> . Transdermal patch. 25 µg/kg/hr continuous IV infusion ²⁶⁹

Primate 8	10-25 µg/kg/hr continuous IV infusion ²⁶⁹
Primate 9	0.005-0.01 mg/kg IV ²³²
Rabbit 1	0.18-0.23 ml/kg continuous IV infusion up to 6 hours ²
Rabbit 2	0.25 mg/kg IM. ⁶ See comments. Immobilization and analgesia. ¹⁷⁷
Rabbit 3	15 µg/kg continuous IV infusion, <u>without droperidol</u> ¹⁴
Rabbit 4	0.7 mg/kg IV (analgesia, <u>without droperidol</u>) ⁵
Rabbit 5	5-20 µg/kg IV bolus <u>without droperidol</u> ¹³
Rabbit 6	0.3 ml/kg IM with diazepam 5.0 mg/kg IM. Anesthesia ¹¹¹
Rabbit 7	Intranasal. Do not use. ⁸⁶
Rabbit 8	½ of a 25 µg/hr patch per medium size rabbit for 3 days. Do not cut patch. ²³³
Rabbit 9	25 µg/hour cutaneous patch. See comments. ²⁶⁰
Rat 1	0.2-0.6 ml/kg IP. ² Immobilization and light anesthesia.
<u>Rat 2</u>	<u>0.30 mg/kg IP mixed with medetomidine 0.20-0.30 mg/kg IP. No droperidol. Surgical anesthesia.</u> ⁹⁰
Rat 3	0.3 ml/kg IM. ² See comments.
Rat 4	0.2-0.4 ml/kg (IP?) with diazepam 2.5 mg/kg (IP?). Excellent surgical anesthesia. ¹¹¹
Rat 5	<i>Neonate</i> Dilute 0.5 ml in 9.5 ml saline. Inject 0.2 ml SC. ²⁴ 3.0-5.0 mg/kg SC or PO ²⁰⁵
Rat 6	5-20 mg/kg IV bolus followed by 15 mg/kg continuous IV infusion. <u>No droperidol.</u>
Rat 7	<i>Neonate</i> 3.0-5.0 µg/kg SC ²⁴⁸
<u>Sheep 1</u>	<u>0.01 mg/kg IV without droperidol.</u> ⁴¹
Sheep 2	See "ketamine"
Sheep 3	Approximately 75 kg animal. Use three 50 µg/hr transdermal patches for 24 hours prior to surgery. ²⁰³
Sheep 4	0.005 mg/kg IV ²²¹
<u>Swine 1</u>	<u>0.01 mg/kg IM (analgesia, without droperidol)³ IV²⁴⁰</u>
Swine 2	0.05 ml/kg IV if weighs <90 kg. 0.025 ml/kg IV if weighs >90 kg ²⁰
Swine 3	0.1 ml/kg IM ¹⁴⁸
Swine 4	0.005 mg/kg IV ²²¹
Swine 5	1.0 ml/13.5 kg IM ²²¹
<u>Swine 6</u>	<u>Swine 30-100 µg/kg/hr IV drip (analgesia, without droperidol)^{3, 240}</u>
<u>Swine 7</u>	<u>Use 25 µg-75 µg/hr transdermal patches for 25-35 kg pig.</u> <u>See comments.</u>
Swine 8	<i>Minipig</i> 100 µg/hr transdermal patch on approximately 20 kg pig. ²⁶²
Swine 9	50 µg transdermal patch on 25 kg pig. ²⁷⁶

Dosage frequency

Amphibian	4 hours
Cat 4	2-5 hours ²⁷⁷

Dog 1	30 minutes ²²⁰
Dog 3	2 hours ⁶
Dog 9	2-5 hours ²⁷⁷
Dog 10	20-30 minutes ²⁷⁷
Guinea Pig 1	60 minutes ¹⁷⁷
Guinea Pig 4	60-90 minutes ²¹⁷
Mouse 1	20-30 minutes ¹⁷⁷
Primate 1	Brief ¹
Primate 5	30-60 minutes light anesthesia ⁶
Primate 9	30 minutes ²³²
Rabbit 2	30-75 minutes ¹³²
Rabbit 5	30-60 minutes ¹³
Rat 1	20-30 minutes ¹⁷⁷
Rat 2	120 minutes ⁹⁰
Rat 5	35 minutes ²⁴
Rat 7	4 hours ²⁴⁸
Sheep 1	60-80 minutes ⁴¹
Sheep 1	25-40 minutes ²²¹
Sheep 4	30 minutes ²²¹
Swine 1	2 hours ³
Swine 5	20 minutes ²²¹
Swine 8	Approx. 3 days ²⁶²

Antagonist

Naloxone (q.v.) for fentanyl
 4-aminopyridine (q.v.) for droperidol⁷²

Comments

All	Animal may be sensitive to loud or abrupt sounds.
All	Atropine recommended 10 minutes before use to prevent bradycardia.
Rodents/Rabbits	Intramuscular injection in rodents and rabbits may cause muscle necrosis. Consider other routes.
Cat 1	Do not use in cat without tranquilizer to prevent excitement reaction.
Cat 2	Hyperventilation ¹³³
Cat 3	Apply 6 hours before surgery ²⁴⁶
Guinea Pig 2	Hyperventilation ¹³³
Mouse 1	Lower dosage for restraint only
Primate 5	Premedicate with atropine 0.04 mg/kg IM, SC ⁶
Rabbit 2	For minor surgical procedures only. ⁶
Rabbit 3	Respiratory depression ²³³
Rabbit 9	Reached blood concentrations presumed adequate for analgesia only if hair did not regrow. No effect on heart rate, respiratory rate or rectal temperature. ²⁶⁰

Rat 2	Significant respiratory depression. Reverse using antagonist shown above. ⁹⁰
Rat 4	Reduces mean arterial blood pressure ¹¹¹
Swine 7	Either begin patch 12 hours prior to surgery or use another analgesic for first 12 hours after patch is applied. ^{211, 244} The 25µg patch leads to blood serum levels below those needed for human analgesia. ²⁷⁶

FENTANYL 0.3 mg/ml (Combined with Fluanisone 10 mg/ml as Hypnorm)

Class Opioid containing sedative, anesthetic

Source Janssen (Not available in US)

Cat	0.5 ml/kg IM ¹⁴⁸
Dog 1	0.1-0.2 ml/kg IM ³⁷
Dog 2	0.1 ml/kg IM. Then pentobarbital, 5.0 mg/kg IV, diluted in IV drip of 1 gram/liter saline, administered at 5 ml/kg/hour. Also, use pancuronium 0.05 mg/kg IV ¹¹¹
Ferret 1	0.3 ml/kg IM (preanesthesia) ¹¹⁶
Ferret 2	0.2 ml/kg IM (analgesia) ¹¹⁶
Gerbil 1	0.5-1.0 ml/kg IM. Immobilization ³⁷ or IP ¹¹⁹
Gerbil 2	0.3 ml/kg IM with diazepam 5 mg/kg IP ³⁷ Anesthesia.
Gerbil 3	0.6 ml/kg IM with xylozine 5.0 mg/kg IP. Sedation. ¹³²
Guinea Pig 1	0.5-1.5 ml/kg IM. ¹³² Sedation and analgesia.
<u>Guinea Pig 2</u>	<u>0.2-1.5 ml/kg IM with diazepam 2.5-5.0 mg/kg IP, IM¹³²</u>
Hamster 1	1 ml/kg IP ³⁷ of 1:10 dilution. See comments. Sedation.
Hamster 2	0.5 ml/kg IP. Immobilization and analgesia. ¹⁷⁷
Mouse 1	0.1-0.3 ml/kg IP. Sedation and light anesthesia. ³⁷
	Combine with diazepam (q.v.) and midazolam (q.v.) for surgical anesthesia. ³⁷
Mouse 2	7-10 ml/kg IP ¹¹⁷
Primate	0.3 ml/kg IM ³⁷ , SC. ²¹⁹ Sedation and analgesia ³⁷
Rabbit 1	0.05 ml/kg IM with diazepam 5 mg/kg IM. See comments. ³⁸ Anesthesia.
Rabbit 2	0.2-0.5 ml/kg IM ³⁷ or SC. ¹³² Sedation. ³⁷ See comments. Short-term anesthesia: ²³³
Rabbit 3	5-20 mg/kg IV bolus. ¹³²
Rabbit 4	15 mg/kg continuous IV drip.
Rabbit 5	0.3 ml IM and approx. 20 minutes later 0.5-2.0 mg/kg midazolam IV ²¹⁸
Rat 1	0.2-0.5 ml/kg IM ³⁷ or IP. ¹³² Immobilization and analgesia ¹⁷⁷
Rat 2	0.3-0.6 ml/kg IP with diazepam (q.v.) or midazolam (q.v.) ³⁷
Swine	See Midazolam and Diazepam

Dosage frequency

Dog 2 6-8 hours¹¹¹

Comments

All	Non-narcotic, non-steroidal cyclooxygenase inhibitor
All	Preferable administered IM. Based on information from primates, this is likely to be a SC irritant
All rodents	Minimal analgesia ²¹⁷
Dog 1, 2	Do not repeat daily dose. Do not use before or after methoxyfluane anesthesia. ¹³³
Dog 1, 2	Reports of GI ulceration and renal damage ¹⁹¹
Ferret	Do not use for more than 3 days ²²³
Goat	Good musculoskeletal analgesia. 2-4 doses maximum ¹⁹
Hamster 1	Variable results ¹⁵⁷
Primate 1	Can use in combination with buprenorphine or morphine. Irritant when given SC ¹⁶⁶
Rabbit	Minimal analgesic efficacy. ¹⁰ Irritating when given SC. Do not use for more than 3 days. ²³³
Sheep	Good musculoskeletal analgesia. 2-4 doses maximum ¹⁹

GALLAMINE (Flaxedil)

Class Nondepolarizing neuromuscular blocking agent
Source Davis & Geck

Calf	0.4 mg/kg IV ⁵⁶
Cat	0.4-1.6 mg/kg IV ^{6, 37}
Dog	0.4-1.0 mg/kg IV ^{6, 37}
Fish	1.0-3.0 mg/kg IM ¹⁴⁷
Rabbit	1.0 mg/kg. Route not indicated ³⁷
Sheep 1	6 µg/kg/min IV ⁵⁶
Sheep 2	Lamb 0.4 mg/kg IV ⁵⁶
Swine 1	4.0 mg/kg IV ¹¹⁰

Swine 2 2.0 mg/kg. Route not indicated³⁷

Dosage frequency

Calf	10-240 minutes ⁵⁶
Cat	15-30 minutes ^{6, 56}
Dog	15-30 minutes ^{6, 56}
Sheep 2	10-240 minutes ⁵⁶
Swine 1	20-40 minutes ¹¹⁰
Swine 2	10-20 minutes ⁵⁶

Antagonist

Edrophonium (q.v.). Do not use after large or multiple doses.⁵⁶

Neostigmine (q.v.)

Pyridostigmine (q.v.)

Comments

All	Precede antagonism with atropine, 0.04 mg/kg IV given slowly. ⁵⁶
All	Crosses placenta ²¹⁶

HALOTHANE (Fluothane)

Class Fluorinated hydrocarbon anesthetic. See comments.

Source Wyeth-Aerst, Fort Dodge

Amphibian	(Terrestrial) 4.0-5.0R in anesthetic chamber ¹⁴⁸
Bird	Induce with 1.0-2.5%, maintain with 0.5-1.5% ¹³⁶
Dog 1	4% for mask or chamber induction. Do not exceed 2.5% once intubated. Maintenance 0.9-1.5%. ⁶
Dog 2	4% with 60% nitrous oxide in oxygen with face mask. Then 1.3 % halothane only (intubated), end-tidal volume ⁴²
Ferret	3-3.5% for induction, 0.5-2.5% for maintenance ¹¹⁶
Fish	0.5-2.0 ml/liter ¹⁴⁷ bubbled through water.
Gerbil	1-4% ¹¹⁹
Goat	See comments.
Guinea Pig	1-3% ² , 1-5%. ¹³² See comments.
Hamster 1	1-4% ²
Hamster 2	2-4% induction, 0.5-2% maintenance ⁸³
Mouse	1-4% ²
Rabbit 1	4% induction, 0.5-1.5% maintenance. ⁵ See comments.
Rabbit 2	4% induction with nitrous oxide:oxygen (2:1) ³⁸
Rat	1-4%. ² See comments.
Sheep	Induce with 10-15 mg/kg thiopental IV and 0.5 mg atropine IV. Then halothane 0.5-2% with nitrous oxide 50% and oxygen 48-49.5% ⁹⁸
Swine	Not recommended due to increased risk of malignant hyperthermia

Dosage frequency
As long as gas is supplied.

Antagonist
Oxygen (not true antagonist)

<i>Comments</i>	
All	Waste gas must be scavenged.
All	May cause respiratory and cardiovascular depression. ³⁷
All	Use higher concentrations for induction, lower for maintenance.
Dog 1	Use nonrebreathing system if <7 kg ⁶
Goat	Respiratory depression requires artificial ventilation. Good anesthesia. ¹⁰⁸
Guinea Pig	May cause hepatocellular necrosis, even at low concentration. ²¹⁷
Rabbit 2	Decrease in blood pressure
Rat, Rabbit	Odor may be unpleasant to rats and rabbits and lead to struggling during induction. Consider mixing with 50% nitrous oxide when using anesthetic machine. ²⁸

HEXOBARBITAL

Class Anesthetic. **Controlled substance.** Not available in US since 1982.
Source

Amphibian	120 mg/kg, dorsal lymph sac ¹⁴⁸
Mouse 1	100 mg/kg IP ²⁸
Mouse 2	47 mg/kg IV ⁸⁵
Rabbit	40 mg/kg IV ²⁸
Rat	100 mg/kg IP ²⁸

HYDROMORPHONE (Dilaudid)

Class Opiate analgesic, preanesthetic. **Controlled substance.**
Source Knoll

Dog 1	0.2 mg/kg IM, anesthesia premedication ¹⁷¹
Dog 2	0.1 mg/kg IV, anesthesia induction ¹⁷¹
Primate	0.01-0.02 mg/kg IM ¹

Dosage frequency
Primate 4-6 hours¹

Comments
Primate Causes vomiting. Sedation comparable to oxymorphone.¹⁷¹

HYPOTHERMIA

Class Analgesic, anesthetic
Source Ice chips

Frog	6°C. for 10 minutes (one leg) ²³⁷
Mouse	<i>Neonatal (1-7 days).</i> Wrap in latex sleeve and place on ice.
Rat	<i>Neonatal (1-7 days).</i> Wrap in latex sleeve and place on ice.
<i>Dosage frequency</i>	
All	30 minutes ¹⁸¹

Antagonist

All Warm gently. Do not use heat pads or lamps to warm due to tissue damage. A 33°C incubator for 20-30 minutes is preferred.²¹⁷

Frog Naltrexone 0.1 mg/kg IP. Naloxone 10.0 mg/kg IP²³⁷

Comments

For neonatal rodents, use only 1-7 days postpartum

IBUPROFEN (Advil, Nuprin, Motrin, generic)

Class Propionic acid derivative, nonsteroidal analgesic
Source Lederle, generic

Cat	5.0 mg/kg PO. ¹⁴⁸ See comments. Suggest Not to Use.
Dog 1	10 mg/kg ²⁰ PO. See duration of effect. See comments.
Dog 2	5.0 mg/kg PO. ¹⁴⁸ See comments.
Guinea Pig	10 mg/kg IV ¹¹ , IM ¹¹⁰
Mouse 1	30 mg/kg PO ¹²
Mouse 2	7.5 mg/kg PO ²⁰
Primate	20 mg/kg/day PO ²⁶⁹
Rabbit 1	10-20 mg/kg IV ¹¹
Rabbit 2	7.5 mg/kg PO ²⁶⁹
Rat 1	7.5 mg/kg PO ¹²
Rat 2	10-30 mg/kg PO ²⁰

Dosage frequency

Cat	24 hours ¹⁴⁸
Dog 1, 2	24-48 hours (slow detoxification) at both dose levels
Guinea Pig	4 hours? ¹¹
Mouse 1	4 hours? ¹¹ 24 hours ²⁷⁷
Mouse 2	4 hours ²⁶⁸
Rabbit 1	4 hours ¹⁰

Rabbit 2	6-8 hours ²⁶⁹
Rat 1	4 hours? ¹¹
Rat 2	24 hours ²⁷⁷
<i>Comments</i>	
Cat	Because of potential toxicity in the cat, it is suggested that this drug not be used .
Dog 1, 2	Reports of gastric perforation. ³⁴ Gastric perforation seen at 3 mg/kg PO q48h for 6 weeks. ³⁵
Rabbit 1, 2	No controlled studies performed for toxicity ¹⁰ or efficacy ²³³

IDAZOXAN

Class α_2 -antagonist
Source Not available in US

Calf	0.05-0.1 mg/kg IV ⁴⁵
Sheep	0.1 mg/kg IV ⁴⁵

INACTIN (ethyl(1-methyl-propyl)malonyl-thio-urea salt)

Class Anesthetic
Source

Hamster	200 mg/kg IP ²¹⁷
Mouse	80 mg/kg IP ²¹⁷
Rabbit 1	See Ketamine
Rabbit 2	47.5 mg/kg IV ²¹⁸
Rat	80-100 mg/kg IP. ¹⁴⁸ Surgical anesthesia ¹⁷⁷

Dosage frequency
 Rat 60-240 minutes¹⁷⁷

ISOFLURANE (Forane, Aerrane, generic)

Class Fluorinated ether anesthetic. See comments.
Source Anaquest

Amphibian 1	(And see Frog) <i>Terrestrial</i> : 4-5% in anesthetic chamber ¹⁴⁸
Amphibian 2	3 ml/L topical bath ²⁷⁹
Amphibian 3	3 ml isoflurane, 1.5 ml water and 3.5 ml KY Jelly. Shake well until uniform and apply to dorsum of skin. Remove gel with moist gauze pad once anesthesia has occurred. ²⁷⁹
Bird 1	5% induction, 0.25-2.0% maintenance ¹³⁶
<u>Bird 2</u>	<u>1.5-2.5%. Drug of choice</u> ¹⁴⁸
Dog 1	1.6% (maintenance) in 50% nitrous oxide and oxygen. ⁷²
Dog 2	1.6% (maintenance) in 50% nitrous oxide and oxygen, with midazolam 0.2 g/kg IV. ⁷²

Ferret	4% in 100% oxygen (2 liters/min) via Bain circuit. Intubate, then 2% in 100% oxygen ¹¹⁵
Fish	0.4-0.75 ml/L induction then 0.25-0.4 ml/L maintenance. Spray under water through a 25 gauge needle. ²⁷⁹
Frog	<i>African clawed frog.</i> 0.008-0.6 ml per gram of moisture-proof disposable underpad. ²⁶⁶
Gerbil	1-4% ¹¹⁹
Goat	See comments.
Guinea Pig	1-3% ² , 1-5% ¹³²
Hamster	1-4% ²
Mouse 1	1-4% ² , See comments
Mouse 2	3% with oxygen flow of 2 liter/min. After induction, 1-2%, oxygen flow of 0.75 liter/min. ⁸⁷ See comments.
Rabbit	4% induction, 0.5-1.5% maintenance ⁵
Rat	1-4% ² , 1-5% ²¹⁷
Sheep	3% induction, 1.5% maintenance. Precedex by ketamine, 15 mg/kg IM. ⁹⁷
Swine	4% induction and 1:1 mixture of nitrous oxide and oxygen (total flow, 5 liters/min). Maintain at 2%. ²⁵

Dosage frequency

All	As long as gas is supplied
Frog	10-27 minutes. Dose dependent. ²⁶⁶

Comment

All	Waste gas must be scavenged.
All	Use higher dosages for induction, lower for maintenance.
All	Respiratory depression and some cardiovascular depression. ¹¹¹
All	Typical induction concentration 3-4% for rodents and rabbits, typical maintenance concentration 1.5-3.0% for rodents and rabbits ¹⁷⁷
Goat	Requires artificial ventilation. Good anesthesia. ¹⁰⁸
Mouse 1, 2	Can cause transient postoperative immunosuppression. May be teratogenic in nice ²¹⁷
Swine	When mixed with nitrous oxide (2:1 isoflurane:nitrous) has the least myocardial depressant effects of any inhaled anesthetics. ²⁴⁰

KETAMINE (Ketalar, Ketaset, Vetalar, generic) **Controlled substance**

Class Arylcyclohexylamine dissociative anesthetic. See comments.

Source Parke-Davis, Fort Dodge

Amphibian 1	50-150 mg/kg SC ¹⁴⁸ , IM ¹⁴⁷
Amphibian 2	10-15 mg/kg SC in dorsal lymph sac. Anesthesia ¹³⁶

Bird 1	10-30 mg/kg IM with xylazine, 1-4 mg/kg IM. Anesthesia ¹³⁶
Bird 2	10-50 mg/kg IM ¹⁴⁸
Bird 3	70-100 mg/kg IM if <100 grams of body weight. ¹⁴⁸
Bird 4	50-80 mg/kg IM if 200-500 grams body weight. ¹⁴⁸
Bird 5	30-60 mg/kg IM if >500 grams body weight. ¹⁴⁸
Calf 1	0.5 mg/kg IV with medetomidine, 20 mg/kg IV ¹³⁵
Calf 2	4.4-10 mg/kg IM with xylazine 0.1 mg/kg IM ²⁰
Cat 1	11 mg/kg IM for restraint.²⁹
Cat 2	22-32 mg/kg IM for minor surgery. ²⁹ Maximum dosage of 50 mg/kg for any single procedure. ²⁹
Cat 3	4.4-6.6 mg/kg IV with diazepam 0.44 mg/kg IV ²⁰ or with diazepam 0.25 mg/kg IV. ⁷⁴ Give as a single bolus. ²²⁰ See comments
Cat 4	0.5-2.0 mg/kg IV ¹²¹
Cat 5	10-22 mg/kg IM, SC with xylazine 1.1 mg/kg IM ²⁰
Cat 6	2.2-6.6 mg/kg IV with xylazine 0.66 mg/kg IV ²⁰
Cat 7	30 mg/kg IM with aceylpromazine 0.1 mg/kg IM³⁷
Cat 8	<i>Male kitten</i> 11 mg/kg IM (for castration) ⁷⁹ <i>Female kitten</i> 11 mg/kg IM with 0.22 mg/kg IM midazolam and 11 mg/kg ketamine IM, all in same syringe. For ovariohysterectomy. See comments. ⁷⁹
Cat 9	7.0 mg/kg IM with medetomidine 80 µg/kg IM. Surgical anesthesia ¹⁵²
Cat 10	10 mg/kg IM with midazolam 0.5 mg/kg IV ²²⁰
Cattle 1	10 mg/kg IV ²²¹
Cattle 2	0.5 mg/kg IV with medtomidine 0.02 mg/kg IV ²²¹
Dog 1	1 ml/5-10 kg with diazepam 50:50 volume ratio. ⁴ See comments.
Dog 2	4.4-6.6 mg/kg IV with xylazine 0.33 mg/kg IV. ²⁰ See comments
Dog 3	11 mg/kg IV with xylazine 1.1 mg/kg IV. ²⁰ See comments.
Dog 4	5.5 mg/kg IV with midazolam 0.28 mg/kg IV (equivalent to 1 ml/9 kg of a 1:1 v/v mixture). ⁷⁰ See comments.
Dog 5	Diazepam 0.5 mg/kg IV then ketamine 10 mg/kg IV. Induction of general anesthesia. ⁷² Use separate syringes. See comments.
Dog 6	2.5-7.5 mg/kg IM with medetomidine 40 µg/kg IM. Light anesthesia. ¹⁵²
Ferret 1	55 mg/kg IM with 0.55 mg/kg acetylpromazine IM ⁴⁰
Ferret 2	10-30 mg/kg IM with 0.05-0.3 mg/kg acetylpromazine IM ¹⁷⁵
Ferret 3	5.0 mg/kg IV. Sedation.
Ferret 4	10-20 mg/kg IM (tranquilization) ¹¹⁶ SC ²³²

Rat 8	87 mg/kg IM ²⁸ or IP ¹³² with xylazine 1 mg/kg IM ²⁸ or IP. ¹³² See comments.
<u>Rat 9</u>	<u>48 mg/kg IM with xylazine 3-5 mg/kg IM, IP.²¹⁷ See comments about IM.</u>
Rat 10	60-75 mg/kg IP with medetomidine 0.25-0.5 mg/kg SC ¹³² , IP ¹⁴⁹ , IM (more effective) ²¹³ . See comments about IM injections. Surgical anesthesia.

Rat 11	60 mg/kg IM with detomidine 10 mg/kg IM for male ¹⁴⁸
Rat 12	40 mg/kg IM with detomidine 5.0 mg/kg IM for female ¹⁴⁸
Rat 13	87 mg/kg IM with azaperone 50 mg/kg IM. Give 25% to 150% of this dose for 1-6 hours duration. ¹⁴⁸
Rat 14	37 mg/kg IM with xylazine 7.0 mg/kg IM. Then maintain with ketamine 1.0-1.25 mg/kg/minute with xylazine 0.032-0.040 mg/kg/min using a syringe pump at 40-50 µl/minute, IV. ¹⁷⁹
Rat 15	75.0 mg/kg IP with midazolam 5.0 mg/kg IP ²³⁹
Rat 16	40 mg/kg IP with midazolam 2.0 mg/kg IP and (optional) butorphanol 0.1 mg/kg IP. ²⁵⁰ Surgical anesthesia.
Rat 17	40 mg/kg IM with 8.0 mg/kg IM xylazine and 4.0 mg/kg IM acetylpromazine. ²⁶⁴ Can also use IP (preferred). See comments.
Rat 18	45 mg/kg IP with medetomidine 0.3 mg/kg IP one hour following buprenorphine 0.05 mg/kg SC. ²⁷² See comments.
Reptile 1	20-60 mg/kg IM ^{72, 278} Sedation.
Reptile 2	55-88 mg/kg IM ²⁷⁸ Surgery
Reptile 3	<i>Lizards</i> 10-50 mg/kg IM ²⁷⁸
Reptile 4	<i>Chelonians</i> 40-80 mg/kg IM ²⁷⁸
Reptile 5	<i>Snakes</i> 30-100 mg/kg IM ²⁷⁸
Reptile 6	<i>Chelonians</i> 1.0-2.0 mg/kg IV ²⁸⁰
Reptile 7	<i>Turtle</i> 5.0-10 mg/kg IM with 0.1-0.2 mg/kg detomidine IM ²⁶¹
Reptile 8	10 mg/kg IM with acetylpromazine 0.05 mg/kg IM and butorphanol 0.1 mg/kg IM ²⁸¹ Sedation.
Sheep 1	10 mg/kg IM with xylazine 0.1 mg/kg IM. ²⁰ Anesthesia ²⁰
Sheep 2	7.5 mg/kg IV with xylazine 0.1 mg/kg IV ⁹⁹
Sheep 3	4.0 mg/kg IV with xylazine 1 mg/kg IM. Give xylazine 10 minutes before ketamine. Light surgical anesthesia ³⁷
Sheep 4	10 mg/kg IM with xylazine 0.2 mg/kg IM. ⁴⁰
Sheep 5	10 mg/kg IV ²²¹
Sheep 6	10 mg/kg IM with diazepam 0.2-05 mg/kg IM. ²⁰ Anesthesia. Use separate syringes.
Sheep 7	7.5 mg/kg IV with diazepam 0.375 mg/kg IV. ⁹⁹ Use separate syringes.
Sheep 8	4.0 mg/kg IV with diazepam 2 mg/kg IM or diazepam 1 mg/kg IV. Anesthesia. ³⁷ Use separate syringes.
Sheep 9	22-44 mg/kg IM, IV with acetylpromazine 0.55 mg/kg IV. ²⁰ Anesthesia.
Sheep 10	4.4 mg/kg IV with diazepam 2 mg/kg IM or 1.0 mg/kg IV. Give diazepam 10 minutes before ketamine. ³⁷ Use separate syringes.
Sheep 11	20 mg/kg IM. Sedation ³⁷

Sheep 12	1.5 mg/ml ketamine, 0.1 mg/ml xylazine, 50 mg/ml guaifenesin. Use with 5% dextrose in saline IV drip. Induce with 0.5 ml/kg of the solution, and maintain anesthesia with flow rate of 2.2 ml/kg/hour ⁹¹
Sheep 13	10 mg/kg IM followed by fentanyl, 3 mg/kg IV. Maintain anesthesia with fentanyl 1.0 mg/kg/hr IV with 50% nitrous oxide.
Sheep 14	0.5 mg/kg IV with medetomidine 0.02 mg/kg IV ²²¹
Swine 1	11-33 mg/kg IM. ³ 10 mg/kg IM ³⁷
<u>Swine 2</u>	<u>22 mg/kg IM with acetylpromazine 1.1 mg/kg IM³</u>
<u>Swine 3</u>	<u>15 mg/kg IM with diazepam 2 mg/kg IM^{3,37} Sedation¹¹¹</u>
Swine 4	Use separate syringes 20 mg/kg IM with xylazine 2 mg/kg IM ³ Sedation. ¹¹¹ Can add acetylpromazine (1.1 mg/kg IM) and atropine (0.05 mg/kg IM) ¹³¹
<u>Swine 5</u>	<u>10 mg/kg IM, IV with xylazine 1 mg/kg IM, IV.²⁰</u> <u>Anesthesia</u>
Swine 6	11 mg/kg IM with fentanyl-droperidol 1.0 ml/14 kg IM ^{3,68}
Swine 7	15-20 mg/kg IV ¹⁴⁸
Swine 8	15 mg/kg IM with azaperone 2 mg/kg IM. ³ Note: Azaperone is no longer commercially available
Swine 9	2 mg/kg IM with xylazine 2 mg/kg IM and oxymorphone 0.075 mg/kg IV (or oxymorphone 0.15 mg/kg IM). ³ Anesthesia.
Swine 10	1.0 mg/kg of 500 mg/ketamine and 500 mg xylazine added to 500 ml of 5% guaifenesin (prepared in 5% dextrose). <u>See comments.</u> ⁶¹
Swine 11	11 mg/kg IM with xylazine 2 mg/kg IM and butorphanol 0.22 mg/kg IM for pigs from 5-20 kg body weight. ⁷⁵
Swine 12	20 mg/kg IM with xylazine 2.0 mg/kg IM, then 50 mg of a 2.5% thiopental solution, dissolved in 500 ml of isotonic saline. Administer IV at 30 drops/minute. ¹¹¹
Swine 13	10 mg/kg IM with medetomidine 80 μ g/kg IM. Light anesthesia. ¹⁵²
Swine 14	<u>10 mg/kg IV with 0.2 mg/kg medetomidine IV²²¹</u>
Swine 15	See Tiletamine
Swine 16	See Midazolam

Swine 12	30-45 minutes at 20 mg/kg ³⁷
Swine 14	30 minutes ²²¹

Antagonist

Cat 1	4-aminopyridine (partial antagonist)
Cat 7	4-aminopyridine (partial antagonist)
Gerbil 7	Mild antagonism by yohimbine (q.v.), 0.2 mg/kg IV ³⁶
Rat 15	Can reverse midazolam with atipamezol (q.v.) ²⁶¹
Reptile 7	Atipamezol for medetomidine
Swine 3	Yohimbine (q.v.) ⁴⁵ (without acetylpromazine)

Comments

All	Not satisfactory alone for abdominal surgery. ⁶ Somatic analgesia.
All	Pedal reflex may remain.
All	Usually poor muscle relaxation.
All rodents/rabbits	Can cause injection site myonecrosis, sciatic axonal degeneration and self mutilation. ²³³ Consider IP if possible.
Cat 3	Empirical reports on Internet of hyperesthesia, nystagmus
Cat 8	Follow by inhalant anesthetic if necessary. ⁷⁹
Dog 1, 5	Empirical reports on Internet of hyperesthesia, nystagmus
Ferret 5	incomplete analgesia ²³²
Gerbil 6	Glutamate receptor antagonist. Do not use in stroke models. ¹³³
Guinea Pig 1	Can use atropine, 0.04 mg/kg IM, SC to control salivation.
Guinea Pig 2, 3, 5-14	Poor analgesia. ¹¹¹
Hamster 10	Not recommended in guinea pig for IM infection in survival studies ²⁸
Hamster 10	Glutamate receptor antagonist. Do not use in stroke models. ¹³³
Mouse 9	May have transient cardiac arrhythmias. ¹³⁰
Primate 1-12	May not provide adequate analgesia for surgery. ³⁷
Primate 9	Hypersalivation common. Give with atropine ²¹⁹
Primate 10	Drug of choice for severe pain. ¹¹⁸
Rabbit 1	Can decrease mean arterial pressure and heart rate ²¹⁹
Rabbit 3	Clinically, found only sedation ¹⁷⁰
Rabbit 9	Poor analgesia ¹¹¹
	Unpredictable levels of anesthesia ³⁸

Rabbit 9,18	Moderate reduction in heart rate. Large decrease in respiratory rate. Moderate reduction in mean arterial pressure. ²⁶
Rabbit 11	May cause severe bradycardia and respiratory depression ²²⁴
Rabbit 24	Variable results ²²⁴
Rat 1	Possible ventricular arrhythmias ¹³⁶
Rat 5	Do not use in pregnant animals ²¹⁷
Rat 7	Poor muscle relaxation and analgesia ³⁷
Rat 15	For short procedures, such as radiographs. Pedal reflex not lost. ²³⁹
Rat 18	May lead to increased mortality after repeated weekly anesthesia ²¹⁷
Sheep 2	Hypotensive ⁹⁹ Cardiac depressant ²²¹
Swine 10	Use atropine 0.04 mg/kg IV, IM before induction ⁶¹
Swine 11	Butorphanol enhances analgesia ⁷⁵

KETOPROFEN (Ketofen, Orudis)

Class Propionic acid derived non-steroidal anti-inflammatory
Source Fort Dodge, Wyeth-Ayerst, Mylan

Bird	2.0-4.0 mg/kg IM ¹¹¹
Cat 1	2.0 mg/kg IV ¹⁴² SC ²⁷⁷
Cat 2	1.0 mg/kg oral. Mild pain control ¹⁴²
Cattle	<i>Cow</i> 3.0 mg/kg IM, IV ²⁷⁷
Dog 1	2.0 mg/kg IM ¹⁴² , SC ¹⁴³
Dog 2	1.0 mg/kg oral. Mild pain control ¹⁴²
Dog 3	2.0 mg/kg IM with oxymorphone 0.05 mg/kg IM ¹⁹⁰
Ferret	1.0 mg/kg PO, IM ²⁶⁹
Mouse	5.0 mg/kg SC ²⁰⁹
Primate 1	<i>Cynomolgus</i> 2.0 mg/kg SC ¹⁹⁸
Primate 2	1.0-5.0 mg/kg IM ²⁰⁸
Primate 3	5.0-10.0 mg/kg PO ²⁰⁸
Rabbit 1	1.0 mg/kg IM ^{148, 269}
Rabbit 2	3.0 mg/kg IM ^{202, 226} SC ²⁷⁷
Rat 1	2.0 mg/kg PO in berry flavored jelly. ¹⁶² See comments.
<u>Rat 2</u>	<u>5.0 mg/kg SC^{209, 269}</u>
Rat 3	2.0 mg/kg SC
Reptile	2.0 mg/kg SC, IM ²⁷⁷
Swine 1	3.0 mg/kg IM ²³⁸
Swine 2	1.0-3.0 mg/kg PO ²⁴⁰

Dosage frequency

Cat 1	12 hours ¹⁴² Once daily for 3 days ²⁷⁷
Cat 2	Once a day for 5 days ^{142, 277}
Cattle	24 hours for up to 3 days ²⁷⁷
Dog 1	12 hours ¹⁴² Once daily for 3 days ²⁷⁷

Dog 2	Once a day for 5 days ^{142, 277}
Ferret	24 hours ²⁶⁹
Primate 2	Twice a day ²⁰⁸
Primate 3	2-4 times a day ²⁰⁸
Rabbit 1	12-24 hours ²⁶⁹
Rabbit 2	24 hours ²⁷⁷
Rat 1	24 hours ¹⁶²
<u>Rat 2</u>	<u>24 hours</u> ²⁷⁷
Reptile	24-48 hours ²⁷⁷
Swine 1	Single dose ²³⁸
Swine 2	8-12 hours ²⁴⁰

Comments

All	cyclooxygenase inhibitor. Use with caution in animals with impaired renal, cardiovascular, hepatic or bleeding disorder.
Dog 1	If necessary, can supplement with oxymorphone 0.05-0.1 mg/kg IM, IV or buprenorphine 0.01 mg/kg IM.
Dog 2	4-5% vomiting incidence
Dog 3	Better than oxymorphone or butorphanol for general postoperative pain ¹⁹⁰
Rat 1	Not effective PO ²⁰⁹
Rat 3	One report of ulcerative, hemorrhagic gastroenteritis involving entire gut after two days of treatment. ²³⁶

KETOROLAC (Toradol)

Class Pyrrolo-pyrrole nonsteroidal anti-inflammatory
Source Roche, Mylan, Fort Dodge

Dog 1	0.5 mg/kg IM ²⁰⁷
Dog 2	30 mg IM if less than 17 kg. 60 mg IM if greater than 17 kg ²²⁰
Mouse	0.7-10 mg/kg PO ²¹⁷
Primate 1	<i>Baboon</i> 1.0 mg/kg (IM?) at time of procedure, then 0.75 mg/kg every 6 hours ²⁰⁸
Primate 2	<i>Macaque</i> 15-30 mg/animal IM ^{219, 269}
Swine	1.0 mg/kg IV ²²⁹ IM ²⁴⁰

Dosage frequency

Dog 1	Twice a day ²⁰⁷
Dog 2	Every 6 hours ²²⁰
Swine	Four times a day ²²⁹

Comments

All	Can inhibit platelet function.
-----	--------------------------------

Dog 1 Repeated use may cause gastrointestinal ulceration and bleeding.

LEVALLORPHAN (Lorfan)

Class Opioid antagonist
Source Roche

Cat	0.02-0.2 mg/kg IM, SC, IV ⁶
Dog	0.02-0.2 mg/kg IM, SC, IV ⁶
Rat	6.0 mg/kg SC ⁸¹

Dosage frequency

Rabbit 1	2-3 hours ^{10, 30, 132}
Rat 1	2-3 hours ^{10, 30}
Reptile	12-24 hours ²⁷⁷
Sheep	45 minutes ⁴¹ 5-30 minutes ²²¹
Sheep, Goat 1	4 hours ³⁷

Swine 1	4 hours ^{3, 72}
Swine 2	45 minutes ^{3, 4}

Antagonist

Levallorphan (q.v.)
Nalorphine (q.v.)
Naloxone (q.v.)

Comments

All	Do not use with head surgery or increased intracranial pressure. ⁷²
All	May be irritating SC. Give slowly IV ⁷²
Cat 1	Use with anticholinergic as preanesthetic. ⁹ Less sedative effect than morphine.
Dog 1	Use with anticholinergic as preanesthetic. ⁹ Less sedative effect than morphine.
Primate	Reports of sudden death even at low dose ¹¹⁸
Rabbit 1, 2	May cause convulsions when given IV (one report only) ²¹⁸

MEPIVACAINE 2% solution (Carbocaine, Scandicain)

Class Local anesthetic
Source Sanofi-Winthrop

Cat 1	2 ml (epidural or caudal anesthesia) ⁴³
Cat 2	2-20 ml intraurethral ⁴³
Cattle	3-10 ml (epidural or caudal anesthesia) ⁴³
Dog	2-5 ml (epidural or caudal anesthesia) ⁴³

Dosage frequency

All 1-4 hours⁴³

Antagonist

Comments

Cat 1, 2 1% solution is also effective⁴³
Dog 1 1% solution is also effective⁴³

METHADONE (Dolophine)

Class Synthetic opioid analgesic. **Controlled substance.**
Source Lilly

Cat 1	Not recommended. ⁵⁵
Cat 2	0.7-1.0 mg/kg epidural ²⁷⁷
Dog 1	1.0 mg/kg IV ¹⁷⁸ , SC. ⁵⁴ Can combine with propionylpromazine (q.v.) as preanesthetic ¹⁷⁸

Dog 2	0.7-1.0 mg/kg epidural ²⁷⁷
Dog 3	0.1-0.25 mg/kg IM, IV, SC ²⁷⁷
Goat	0.2 mg/kg IM ¹⁰⁶
Guinea Pig	3.0-6.0 mg/kg SC ¹⁴⁸
Hamster	3.0-6.0 mg/kg SC ¹⁴⁸
Mouse	1.6-2.0 mg/kg SC ¹²
Primate	0.0-1.0 mg/kg IM, PO ¹
Rabbit 1	0.7 mg/kg IV ⁵
Rabbit 2	0.1-0.5 mg/kg IV ²¹⁸
Rat 1	1.0 mg/kg IP ¹⁰
Rat 2	3.75 mg/kg SC ¹⁰

Dosage frequency

Cat 2	4-9 hours ²⁷⁷
Dog 1	6-10 hours ¹⁷⁸
Dog 2	6-10 hours ¹⁷⁸
Dog 3	4-6 hours ²⁷⁷
Goat	3 hours ¹⁰⁶
Primate	2-6 hours ¹

METHOHEXITAL (Brevane, Brevitol)

Class Anesthetic. See comments. **Controlled substance.**

Source Lilly

Bird	4.0-8.0 mg/kg IV ¹⁴⁷
Calf	3-4.5 mg/kg IV ²¹
Cat	10-12 mg/kg IV ⁶
Dog	10-12 mg/kg IV ⁶ , 4-8 mg/kg of 1% solution ³⁷
Goat	4.0 mg/kg IV ³⁷
Guinea Pig	31 mg/kg IP ³⁷ See comments
Hamster	60-90 mg/kg IP ⁷⁸
Mouse 1	8-16 mg/kg IV ¹³² Surgical anesthesia
Mouse 2	6.0 mg/kg IV ¹⁴⁸
Primate	10 mg/kg IV ³⁷
Rabbit 1	6-8 mg/kg IV ²¹ use 1:10 dilution.
Rabbit 2	10-15 mg/kg IV ³⁷ use 1:10 dilution
Rat 1	10-15 mg/kg of 1% solution IV ³⁷
Rat 2	7.0-10 mg/kg IV ¹⁴⁸
Rat 3	40 mg/kg IP ¹³²
Rat 4	40 mg/kg IP (induction) with pentobarbital, 20 mg/kg maintenance IP ¹³²
Sheep	4.0 mg/kg IV ³⁷
Swine	5.0 mg/kg IV ³⁷

Dosage frequency

Cat	5-10 minutes ⁶
-----	---------------------------

Dog	5-10 minutes ^{6, 37}
Mouse 1	2 minutes ¹³² , 5 minutes ¹⁷⁷
Primate	5-10 minutes ³⁷
Rabbit	5-10 minutes ³⁷
Rat 1	5-10 minutes ³⁷
Rat 3	15-20 minutes ¹³²
Rat 4	2 hours ¹³²
Sheep, Goat	5-10 minutes ³⁷

Comments

All	Use only as induction agent ⁶
Sheep, Goat	For immobilization

METHOXYFLURANE (Metofane, Panthrane)

Class Halogenated ethyl methyl ether anesthetic
Source Schering-Plough. No longer commercially available in US

Bird	Induce at 3-4%, maintain at 1-2% ¹³⁶
Cat	3% induction, 0.5% maintenance ¹⁴⁷
Dog	1-3% induction, 0.3-1% maintenance ⁶
Ferret	1-3% induction ¹¹⁶
Gerbil	1-3% ¹¹⁹
Guinea Pig	0.5-3% ² see comments
Hamster 1	1-4% ²
Hamster 2	1-3% ¹¹⁹
Mouse	0.5-3% ²
Primate	1-3% induction, 0.3-1% maintenance ⁶
Rabbit	1-3% induction, 0.3-1% maintenance ⁵
Rat 1	0.5-3% ²
Rat 2	<i>Neonatal</i> Safe with methoxyflurane soaked cotton in bell jar ¹⁸¹

Dosage frequency

All	As long as gas is supplied
Rat 2	30 minutes ¹⁸¹

Antagonist

Oxygen (not true antagonist)

Comments

All	Waste gas must be scavenged
All	Can cause respiratory and cardiovascular depression
All	Consider mixing with 50% nitrous oxide for maintenance when using anesthesia machine
Rodents, Rabbits	Typical induction concentration is 3-3.5%, maintenance 0.4-1% ¹⁷⁷

Dog	Often use flow rate of 15 ml/min/kg of 1:1 nitrous oxide and oxygen ⁶⁰
Guinea Pig	Can cause excess salivation. Premedicate with atropine.
Primate	Use non-rebreathing system if <7 kg ⁶

METOMIDATE (Hypnodil)

Class Imidazonoe derivative anesthetic
Source Not available in US

Fish 1	<i>Channel catfish</i> 4-10 mg/liter ¹²³
Fist 2	<i>Rainbow trout</i> 4-10 mg/liter ¹²³
Gerbil	50 mg/kg IP, SC ¹⁴⁷
Goat	60 mg/kg IP ¹⁴⁷
Hamster	50 mg/kg IP ¹⁴⁷
Mouse	50 mg/kg IP ⁸²
Swine 1	2 mg/kg IM ³⁷ Immobilization
Swine 2	3.3 mg/kg IV, after azaperone (q.v.) ³⁷ anesthesia.
Swine 3	4.0 mg/kg IV ²²¹
<i>Dosage frequency</i>	
Mouse	15 minutes ⁸²

MIDAZOLAM (Versed)

Class Benzodiazepine tranquilizer, Sedative. **Controlled substance.**
Source Roche

Bird 1	1.0 mg/kg IM ¹⁴⁷
Bird 2	<i>Pigeon</i> 15.0 mg/kg IM. Preanesthetic ¹³⁶
Cat 1	0.066-0.22 mg/kg IM, IV ⁷²
Cat 2	0.2-0.4 mg/kg IM, IV ²²⁰
Cattle	0.4-1.3 mg/kg IV ²²¹ sedation
Dog 1	0.1-0.3 mg/kg IM, IV ⁷²
Dog 2	0.066-0.22 mg/kg IV, IV ⁷²
Dog 3	See Xylazine
Ferret 1	1.0 mg/kg IM, SC ¹⁷⁵
Ferret 2	0.5-3.0 mg/kg IM, SC ²⁸¹
Gerbil 1	10 mg/kg IP ¹⁴⁷
Gerbil 2	1.0-2.0 mg/kg IM, SC ¹⁷⁵
Hamster 1	5.0 mg/kg IP ¹⁴⁷
Hamster 2	1.0-2.0 mg/kg IM, SC ¹⁷⁵
Mouse 1	5.0 mg/kg IP ¹⁷⁷
Mouse 2	1.0-2.0 mg/kg SC ²³⁴
Primate 1	0.05-1.5 mg/kg IM, SC ²⁸² Sedation
Primate 2	<i>Lemur</i> 0.1-0.5 mg/kg IM ²⁶⁹
Rabbit 1	0.25 mg/kg IM ²³ see comments
Rabbit 2	2 mg/kg IV ³⁷ see comments IM ¹⁷⁵ IP ²⁶⁹
Rabbit 3	4 mg/kg IM, IP ³⁷ see comments

Rabbit 4	2.0 mg/kg Intranasal ⁸⁶ Dilute with saline to 0.4 ml/kg
Rat 1	2 mg/kg IV ³⁷
Rat 2	4 mg/kg IM, IP ³⁷
Rat 3	See Ketamine
Reptile 1	<i>Red-eared slider turtle</i> 1.5 mg/kg IM for muscle relaxation ²⁸⁰
Reptile 2	<i>Snapping and Red-eared turtles</i> 1.5 mg/kg IM with ketamine 20-40 mg/kg IM. Sedation and anesthesia ²⁸⁰
Reptile 3	0.5 mg/kg with oxymorphone (0.1 mg/kg) IM and glycopyrrrolate (0.01 mg/kg) 0.4-1.3 mg/kg IV ²²¹
Sheep	0.4-1.3 mg/kg IV ²²¹
Swine 1	100-500 µg/kg IM ³ IV ²²¹
Swine 2	100 µg/kg IM ¹²⁸
Swine 3	Thiopental (30 mg/kg IV) followed by midazolam (0.90 mg/kg IV), then continuous infusion of 0.90 mg/kg/hr and fentanyl (0.25 mg/kg IV), then continuous infusion of 0.025 mg/kg/hr ¹³⁷
Swine 4	<i>Piglet</i> Ketamine 20 mg/kg IM then midazolam 1.0 mg/kg IM ⁸⁸
Swine 5	<i>Adult</i> Ketamine 33 mg/kg IM, then midazolam 0.5 mg/kg IM ²²¹
Swine 6	<i>Piglet</i> 0.2 mg/kg intranasal for sedation ²⁷¹
Swine 7	<i>Piglet</i> 0.4 mg/kg IV for sedation ²⁷¹

Dosage frequency

Cat 2	Less than 2 hours ²²⁰
Cattle	15-30 minutes ²²¹
Primate 1	30 minutes ²⁸²
Rabbit 4	25 minutes ⁸⁶
Sheep	15-30 minutes ²²¹
Swine 1	20 minutes ²²¹
Swine 3	2 hours ¹³⁷
Swine 5	45 minutes ²²¹

Antagonist

Flumazenil (q.v.)²²

Comments

All	Use carefully with barbiturates or CNS depressants due to respiratory depression ⁷²
Dog 2	Good for aged or debilitated animals ⁷⁰
Rabbit 1-3	See medetomidine
Rabbit 4	Dilates ear vessels ⁸⁶
Reptile 1	Not good in snapping turtles or painted turtles ²⁸⁰
Swine	May reduce blood pressure ²⁵⁸

MIVACURIUM (Mivacrom)

Class Nondepolarizing skeletal muscle relaxant
Source Glaxo Wellcome

Primate	0.04 mg/kg IV ²¹⁶
Swine	0.02 mg/kg IV ²¹⁶

Dosage frequency

Primate 14-20 minutes

Antagonist

4-aminopyridine (q.v.)

MORPHINE (Duramorph, Astramorph PF)

Class Opioid analgesic (good for musculoskeletal pain), sedative. **Controlled substance.**

Source AstraZeneca, generic

Amphibian 1	See Frog
Amphibian 2	30-160 mg/kg IM, SC (dorsal lymph sac), topical ²⁷⁸

Antagonist

All	Levallophan (q.v.)
All	Nalorphine (q.v.)
All	Naloxone (q.v.)
Frog 2	Naloxone 0.01 mg/kg IP ²³⁷
Frog 2	Naltrexone 0.01 mg/kg IP ²³⁷

Comments

All	May cause respiratory depression if opioids are used for anesthesia.
Calf	Can cause excitement in ruminants ¹⁹
Cat 1, 3	In cat, should not be used without a tranquilizer to prevent excitement reaction. ⁶
Dog 1-6	Associated with vomiting and defecation. ⁴ Do not give rapidly IV to dog (leads to excitement) ⁶
Dog 6	Using commercial morphine sulfate with preservative.
Goat	Can cause excitement in ruminants ¹⁹
Guinea Pig 1	Some sedation and respiratory depression. Dose dependent.
Mouse 1	Some sedation and respiratory depression. Dose dependent.
Primate 1, 2	Causes vomiting ²⁸²
Rabbit	Some sedation and respiratory depression. Dose dependent.
Rat 1	Some sedation and respiratory depression. Dose dependent.
Sheep	Can cause excitement in ruminants ¹⁹
Rabbit 1	Can cause hypertension and hyperglycemia ²¹⁸

Class Opioid analgesic. Controlled substance.

Source Janssen

Cat 1	2.0 µg/kg IV to a maximum of 5 µg/kg ⁷¹
Cat 2	0.7-2.0 µg/kg ²⁷⁷
Dog 1	2.0 µg/kg IV or a maximum of 5 µg/kg ⁷¹
Dog 2	2.0 µg/kg IV ²⁷⁷
Mouse	0.0023 mg/kg SC (ED ₅₀) ²¹⁷
Rat 1	See Medetomidine
Rat 2	0.71 µg/kg IV ⁵⁴
Rat 3	<i>Pup 10 days old</i> 1.7 µg/kg (ED ₅₀). Route?
Rat 4	<i>Pup 27 days old</i> 7.6 µg/kg (ED ₅₀). Route?
Swine 1	5.0-10 µg/kg IM ³
Swine 2	10-15 µg/kg/hr IV drip. ³ 15-30 µg/kg/hr IV drip ²⁴⁰
Swine 3	0.007 mg/kg IV ²⁴⁰

Dosage frequency

Cat 2	4-6 hours ²⁷⁷
Dog 2	4-6 hours ²⁷⁷
Swine 1	2 hours ³

Antagonist

Naloxone (q.v.)

Comments

Cat	Premedicate with acetylpromazine ⁷¹
Dog	Premedicate with acetylpromazine ⁷¹

SUXAMETHONIUM – see Succinylcholine

THIAMYLAL (Surital, Biothal, Bio-Tal)

Class Thiobarbiturate anesthetic. Controlled substance.

Source Not available from US pharmaceutical companies. Listed in Sigma catalog

Calf	9-13 mg/kg IV ²¹
Cat 1	16-20 mg/kg IV ⁶
Cat 2	9-13 mg/kg IV ²¹
Cat 3	8.8 mg/kg IV with opioid premedication ⁷²
Dog 1	16-20 mg/kg IV ⁶
Dog 2	9-13 mg/kg IV ²¹

Dog 3	8.8 mg/kg IV with opioid premedication ⁷²
Mouse	25-50 mg/kg IV ²⁰
Primate	25 mg/kg IV ¹⁴⁸
Rabbit	15-25 mg/kg of 1% solution, IV ⁵
Rat	20-50 mg/kg IV ²⁰
Sheep	13.2 mg/kg IV ⁷²
Swine 1	6.6-8.8 mg/kg IV ³
Swine 2	9-13 mg/kg IV ²¹
Swine 3	17.6 mg/kg IV ⁷² (from package insert)

Dosage frequency

Dog 1	15 minutes ⁶
Sheep	4-12 minutes ⁷²
Swine 2	15 minutes ⁶ , 5-10 minutes ³⁷

Comments

All	Some species (e.g. cats) may have transient apnea during induction
-----	--

THIOPENTAL (Pentothal)

<i>Class</i>	Thiobarbiturate anesthetic. Controlled substance.
<i>Source</i>	Abbott

Swine 3	See Midazolam
Swine 4	24-30 mg/kg IV ¹⁴⁸

Dosage frequency

Cat 1	15 minutes ⁶
Dog 1	15 minutes ⁶
Dog 1	5-10 minutes ³⁷
Dog 2, 3	15 minutes ²²⁰
Goat	5-10 minutes ³⁷
Mouse 1	10 minutes ¹³²
Primate 1	5-10 minutes ³⁷
Rabbit 1, 3	5 minutes ¹⁷⁷
Rat 1	5-10 minutes ³⁷
Sheep 1	5-10 minutes ³⁷

Comments

All	Some species (e.g. cats) may have transient apnea during induction
All	Administer first 1/3 rapidly to avoid excitement phase of anesthesia
Rabbit	Dilute 1:10 with saline

TILETAMINE (Combined with zolazepam as Telazol)

Class Arylcyclohexylamine dissociative anesthetic with benzodiazepine tranquilizer. Controlled substance.

Source Fort Dodge, Robins

Calf 1	4.0 mg/kg IV ¹³⁵ anesthesia
Calf 2	4.0 mg/kg IV with xylazine 0.1 mg/kg IM ¹³⁵
Cat 1	1.0 mg/kg IV ¹³³
Cat 2	5.0 mg/kg SC, IM ¹³³
Cat 3	2.0-15.0 mg/kg IV, IM ⁵⁸
Dog 1	1.0 mg/kg IV ¹³³
Dog 2	2.0-13.0 mg/kg IV, IM ¹⁵⁸
<u>Dog 3</u>	<u>5.0 mg/kg IM, SC</u> ¹³³
Ferret 1	12-22 mg/kg IM, SC ¹³⁰ Minor surgery. ¹³⁶
Ferret 2	Not recommended at 22 mg/kg IM ¹⁸⁵

Ferret 3	3.0 mg/kg IM with ketamine 2.4 mg/kg IM and xylazine 0.6 mg/kg IM ¹⁸⁵
Ferret 4	1.5 mg/kg IM with xylazine 1.5 mg/kg IM. ²³² Can add butorphanol 0.2 mg/kg IM ²³²
Gerbil 1	60 mg/kg IM ¹¹⁹
Gerbil 2	10-30 mg/kg IM with xylazine 5.0 mg/kg IM ¹⁷⁵
Goat	7.5 mg/kg IM, maintain on isoflurane. ⁴⁰
Guinea Pig 1	10-80 mg/kg IM or IP ¹³² Sedation. See comments.
Guinea Pig 2	40-60 mg/kg IM. Immobilization. ¹⁷⁷
Guinea Pig 3	10-30 mg/kg IM with xylazine 5.0 mg/kg IM. See comments.
Guinea Pig 4	60 mg/kg IP (total amount of the combined drugs) with xylazine 5.0 mg/kg IP and butorphanol 0.1 mg/kg IM ²⁷⁴ (diluted 1:10 in saline). Surgical anesthesia.
Hamster 1	40 mg/kg IM ¹¹⁹ Sedation
Hamster 2	20-80 mg/kg IP for restraint only ²
Hamster 3	20 mg/kg IP with 10 mg/kg xylazine IP. Restraint only. ²⁷
Hamster 4	30 mg/kg IP with xylazine 10 mg/kg xylazine IP. Surgical anesthesia. ²⁷
Mouse 1	Do not use. See comments
Mouse 2	45 mg/kg IM combined with xylazine 7.5 mg/kg IM. ¹⁰⁴ See comments.
Primate 1	4-10 mg/kg oral ⁷⁶
Primate 2	<i>Rhesus, squirrel</i> 5.0 mg/kg (0.05) ml/kg IM for short procedures. ¹¹⁸ Double dose for longer procedures.
Primate 3	<i>Lemurs</i>
Primate 4	<i>Marmosets/tamarins</i> 20 mg/kg IM ⁷⁶ 5.0 mg/kg IM ²¹⁹
Primate 5	<i>Cynomolgus</i> 2.0 mg/kg IM sedation ¹⁵⁶
Primate 6	<i>Cynomolgus</i> 3.0-4.0 mg/g IM light anesthesia ¹⁵⁶
Primate 7	<i>Rhesus</i> 1.5-3.0 mg/kg IM ²¹⁸ light anesthesia ¹⁷⁰
Primate 8	<i>Baboon</i> 4.0-6.0 mg/kg IM ²¹⁹
Rabbit 1	32 mg/kg IM. ⁶³
Rabbit 2	50-80 mg/kg IM ¹⁷⁵
Rabbit 3	10 mg/kg Intranasal. ⁸⁶ Dilute with saline to 0.4 ml/kg.
Rabbit 4	15 mg/kg IM with xylazine 5.0 mg/kg IM ¹⁴⁸
Rat 1	20-40 mg/kg IP, IM ² Light anesthesia ¹⁷⁷
Rat 2	20-40 mg/kg IP Light anesthesia ¹⁷⁷
Rat 3	20-40 mg/kg IP with butorphanol 1.25-5.0 mg/kg IP ¹³²
Sheep 1	12-24 mg/kg IV ⁹² 4.0 mg/kg IV ²²¹
Sheep 2	2.2 mg/kg IM ¹⁴⁸
Sheep 3	See Butorphanol
<u>Swine 1</u>	<u>4-6 mg/kg IM with xylazine 2.2 mg/kg IM, except for cardiac compromised animals.</u> ^{3, 40} Preanesthetic. Can add glycopyrrolate (0.01 mg/kg IM) or atropine (0.05 mg/kg IM) ¹³¹

Swine 2	2.2 mg/kg IM with xylazine, 2.2 mg/kg IM and sterile water 2.5 ml ¹⁴⁰
<u>Swine 3</u>	<u>2.2-5.0 mg/kg IM, with ketamine 2.2-2.5 mg/kg IM and xylazine 2.2-2.5 mg/kg IM.</u> ^{140, 283}
Swine 4	2.0-8.8 mg/kg IM ²²¹
Swine 5	2.0 mg/kg IV ²²²

Dosage frequency

Cat 3	30-60 minutes ⁷²
Dog 2	30 minutes ⁷²
Dog 3	20-30 minutes ²²⁰
Ferret 3	33 minutes ¹⁸⁵
Guinea Pig 4	64-96 minutes ²⁷⁴

Hamster 3, 4	30 minutes ^{177, 27}
Mouse 2	36 minutes ¹⁰⁴
Primate 4	15 minutes ²¹⁹
Primate 5	30-40 minutes (light anesthesia) ¹⁵⁶ , 45-60 minutes (deep anesthesia) ¹⁵⁶
Primate 7, 8	45-60 minutes ²¹⁹
Rabbit 2	44 minutes ⁸⁶
Rat 1	15-25 minutes ¹⁷⁷
Rat 2	130-200 minutes ²¹⁷
Sheep 1	40 minutes ⁹²
Swine 1	20-30 minutes ²²¹
Swine 4	20 minutes ²²¹

Antagonist

Partial by yohimbine (q.v.)

Comments

All	May cause necrosis in rodents when used IM.
Cat 3	Higher dosages for anesthesia, lower for diagnostic purposes ⁷²
Cats	May be “rough” recovery ¹³³
Dog 2	Higher dosages for anesthesia, lower for diagnostic purposes ⁷²
Dogs	May be “rough” recovery ¹³³
Ferret 1	May see paddling and sneezing during recovery ²³²
Ferret 3	Short duration of analgesia and rough recovery ¹⁸⁵
Mouse 1	Unsatisfactory. Too lethal for mice. ⁶⁵
Primate 3	combine with diazepam or midazolam (0.1-0.5 mg/kg IM) to prevent seizures ⁷⁶
Rabbit 3	No clinical abnormalities. Kidney function not studied. ⁸⁶ Dilates blood vessels of ear. ⁸⁶

Rabbits	Do not use for survival studies in rabbits due to nephrotoxicity. ⁶³
Sheep 1	Significant effects on heart and lung function. Prolonged sedation. ⁹²
Swine 1	Give atropine 0.05 mg/kg IM 10-15 minutes prior to intubation ⁴⁰
Swine 1, 2	Can cause cardiodepression ²²¹
Swine 3	To prepare the higher dosage range shown: Reconstitute a 500 mg bottle of Telazol with 250 mg of ketamine and 250 mg of xylazine.

TOLAZOLINE (Priscoline)

Class α_2 -adrenergic antagonist
Source Ciba Geneva, Sigma

Calf 1	6.6 mg/kg IV. ⁴⁵
Calf 2	1-2 mg/kg IV ¹⁸⁹
Cat	2 mg/kg IV ⁴⁵ , IM ¹³³
Dog	5 mg/kg IV ⁴⁵ , IM ¹³³
Rabbit	6.6 mg/kg IV ¹⁴⁷
Sheep	0.4-0.67 mg/kg IV ⁴⁵
Swine	1-2 mg/kg IV ⁶¹

Comments

All Give slowly intravenously⁴⁵
 Calf 1, 2 Can cause hyperesthesia at this and lower dosages¹³⁵

TOLFENAMIN ACID (Clotam, Rocielyn)

Class Non-steroidal Ant-inflammatory/Analgesic
Source Sigma, Luitold (Switzerland), Inphazam (Netherlands)

Dose

Cat 1	4.0 mg/kg at end of surgery. ¹⁴⁴ SC
Cat 2	4.0 mg/kg PO ²⁷⁷
Dog	4.0 mg/kg PO ²⁷⁷
Cattle	Cow 2.0 mg/kg IM ²⁷⁷

Dosage frequency

Cat 1	24 hours ¹⁴⁴ up to 2 days ²⁷⁷
Cat 2	24 hours up to 3 days ²⁷⁷
Dog	24 hours up to 3 days ²⁷⁷

Comments

All Cyclooxygenase inhibitor

TRIBROMOETHANOL (Avertin, no longer available commercially)

<i>Class</i>	Anesthetic
<i>Source</i>	Aldrich, Pfaltz & Bauer, other chemical suppliers
Gerbil 1	250-300 mg/kg IP of 1.25% solution ³⁷
Gerbil 2	225-250 mg/kg SC of 2.25% solution IP. ¹³² Anesthesia.
Mouse 1	125 mg/kg IP of 0.25% solution ^{2,37}
Mouse 2	250 mg/kg IP ^{28,66} Surgical anesthesia
<u>Mouse 3</u>	<u>0.015-0.017 ml/gram IP of following: Make stock solution by mixing 10 ml of tertiary amyl alcohol with 10 grams tribromoethanol. Take 1.25 ml of stock solution and add to 48.75 ml of water or saline (i.e. a 2.5% solution). Filter sterilize and place in sterile bottle. Store in foil, in refrigerator⁹⁵ up to 6 weeks.</u>
Mouse 4	450 mg/kg IP as a 2.5% solution ²⁷⁷
Rat	300 mg/kg IP ^{2,37}

Dosage frequency

Gerbil 1	10-35 minutes ¹³²
Gerbil 2	20-63 minutes ¹³²
Mouse 1	15-20 minutes ²
Mouse 2	15-45 minutes
Rat	15-20 minutes ²

Comments

All	Must be carefully prepared as in reference 66
All	Good muscle relaxation
Rat	High mortality possible ³⁷ Fibrous adhesions and peritonitis at 200-400 mg/kg. Hepatic capsular fibrosis and adhesions. ²⁴¹
Mouse 1, 2	High mortality possible ³⁷ May cause peritonitis and fibrinous serositis of abdominal organs ²²⁷
Mouse 2	Varies from deep to light anesthesia ⁹⁵

Swine 1	1.2 mg/kg IM ²¹ IV ¹⁸²
Swine 2	10 mg/kg IM ¹⁴⁸
Swine 3	0.2 mg/kg IM ²²¹

Dosage frequency

Cat 1	30 minutes ⁹
Cat 4	1-4 hours ²⁷⁷
Dog 2	Up to 12 hours sedation ¹¹¹
Dog 3	30 minutes ⁹
Dog 6	30-60 minutes ²²⁰
Dog 7	1-4 hours ²⁷⁷
Frog	12-24 hours ¹⁸⁴
Goat	30-60 minutes ¹⁹ 30-35 minutes ³⁷
Primate	30 minutes ²⁸²
Rabbit 1	3-4 hours ¹⁰ , 20-60 minutes ⁷⁰
Rabbit 2	2-3 hours ¹⁰
Rabbit 3, 4	40 minutes ³⁹
Rabbit 5	60-120 minutes ³⁹
Rat 1	2 hours ¹⁰
Sheep	30-60 minutes ¹⁹ 30-35 minutes ³⁷
Swine 3	5 minutes ²²¹

Antagonist

Atipamezole (q.v.)
 Idazoxan (q.v.)
 Tolazoline (q.v.)
 Yohimbine (q.v.)

<i>Comments</i>	
Calf	Will cause hyperglycemia. ¹³⁵ Can have oxytocin-like effect on uterus. Use detomidine in pregnant animals. ¹³⁵
Cat 1	May cause respiratory depression.
Cat 1, 2	Sensitizes myocardium. Induces hyperglycemia.
Dog 1	Use with caution. If used for preanesthesia, decrease dose of anesthetic induction agent by 75%. ⁴ Causes vomiting in 50% of dogs and 90% of cats. ⁶ Do not use alone for anesthesia or analgesia (insufficient analgesia). ²⁰
Dog 1-3	Heart rate and aortic blood flow reduced.
Dog 1-4	Avoid use in large dogs prone to gastric dilation
Dog 1, 3	Use with caution. If used for preanesthesia, decrease dose of anesthetic induction agent by 75%. ⁴ Causes vomiting in 50% of dogs and 90% of cats. ⁶ Do not use alone for anesthesia or analgesia (insufficient analgesia). ²⁰
Ferret 1	Sensitizes myocardium. Induces hyperglycemia
Goat	May cause transient cardiac arrhythmias ¹³⁰
Mouse 2	Very sensitive. Respiratory depression and heart block can occur. Only use for acute pain. Do not repeat after initial dose. Use for sedation only. ³⁷ Many cardiovascular effects.
Rabbit 1, 2	May lead to lowered blood pressure ¹¹⁰
Rabbit 2	Opioids better for somatic pain. ¹⁰ Can have severe bradycardia and respiratory depression. ²³⁴
Rabbit 2	Heart rate and aortic blood flow reduced.
Rabbit 5	Sensitizes myocardium. Induces hyperglycemia
Rat 1	Severe hypothermia ³⁹
Rat 1	Opioids better for somatic pain ¹⁰
Sheep	Sedation but poor analgesia ³⁷
Sheep	Very sensitive. Respiratory depression, fatal pulmonary edema and heart block can occur. Only use for acute pain. Do not repeat after initial dose. Use for sedation only. ³⁷
Swine 1	Many cardiovascular effects.
Swine 1	Will cause hyperglycemia. ¹³⁵ Can have oxytocin-like effect on uterus. Use detomidine in pregnant animals. ¹³⁵
Swine 1	May cause vomiting, salivation, bradycardia ⁶¹

YOHIMBINE (Yobine, Antagonil)

Class α_2 adrenergic antagonist. Xylazine antagonist
Source Wildlife Pharmaceuticals, Lloyd

Calf	0.125 mg/kg IV with 4-aminopyridine 0.3 mg/kg IV ⁴⁵
Cat 1	0.25 mg/kg IV with 0.6 mg/kg 4-aminopyridine IV ⁴⁵
Cat 2	0.1 mg/kg IV ^{45, 111}
Cat 3	0.5 mg/kg IV ⁷²

Dog 1	0.125 mg/kg IV with 4-aminopyridine 0.3 mg/kg IV ⁴⁵
