## GENERAL

The PV85 (2 off) is designed to conduct maritime surveillance, in conjunction with maritime air patrol assets to the limit of New Zealand's EEZ, in the South Pacific and in the Southern Ocean for a total of about 420 days annually. Tasks in the southern half of the EEZ are mostly offshore, but activity in the south almost doubles during winter, coinciding with the worst sea states.

PV85 he Tenix Offshore Patrol Vessels are based on a design already in service with the Irish Navy. They will be built in Melbourne with modules made in Whangarei, where modules were also built for the 10-ship Anzac frigate project
