About this poll: Cell-phone and home-phone respondents were included in this research. SurveyUSA interviewed 1,200 state of KY adults 01/30/14 through 02/04/14. Of the adults, 1,082 were registered to vote in the state of Kentucky. Of the registered, 404 were registered as Republicans, and are eligible to vote in the Republican Primary. Primary questions asked only of Republicans. Other questions asked of all registered voters. This survey was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (77% of registered voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (23% of registered voters) were shown a questionnaire on their smartphone, tablet, or other electronic device. This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by [Survey Sampling](#), of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent [US Census](#) estimates for age, gender, ethnic origin and [region](#), to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by [SurveyUSA](#) of Clifton, NJ. This statement conforms to the principles of disclosure of the [National Council on Public Polls](#).

1 Do you approve or disapprove of the job Barack Obama is doing as President?
