Transportation Energy Data Book

Quick Facts

Petroleum

- The U.S. produces 10 million barrels of petroleum per day (M bpd), or 12% of the world's 85.35M bpd.
- The U.S. consumes 18.6 M bpd, or 21% of the world's 88.3 M bpd.
- U.S. transportation petroleum use is 67% of total U.S. petroleum use.
- U.S. transportation petroleum use is 126% of total U.S. petroleum production.
- Petroleum comprises 92% of U.S. transportation energy use.
- Cars and light trucks account for 63% of U.S. transportation petroleum use.
- Medium trucks (Class 3-6) account for 4% of U.S. transportation petroleum use.
- Heavy trucks (Class 7-8) account for 17% of U.S. transportation petroleum use.

Energy

- U.S. transportation energy use accounts for 28% of total U.S. energy use.
- In 2011, 98% of ethanol consumed in the U.S. is consumed as ethanol in gasohol (E10).
- Cars and light trucks account for 59% of U.S. transportation energy use.
- Medium trucks account for 5% of U.S. transportation energy use.
- Heavy trucks account for 17% of U.S. transportation energy use.

Light Vehicle Characteristics

- There are 111,290 cars and 120,847 light trucks in the U.S. (232,137 total light vehicles).
- U.S. cars:
 - 7,586,000 cars were sold in 2013.
 - The average age of a U.S. car is 11.4 years; the average car lifetime is 16.9 years.
 - The average fuel economy for the U.S. car fleet (all cars on the road today) is 24.9 mpg.
 - Cars comprise 50% of new light vehicle sales.
- U.S. light trucks:
 - 7,693,000 light trucks were sold in 2013.
 - The average age of a U.S. light truck is 11.3 years; the average light truck lifetime is 15.5 years.
 - The average fuel economy for the U.S. light truck fleet (all light trucks on the road today) is 18.5 mpg.
 - Light trucks comprise 50% of new light vehicle sales.
- There were 8,716,720 fleet vehicles in 2013: 4,438,330 cars and 4,278,390 trucks.
- U.S. car registrations account for 16% of total world car registrations.
- U.S. truck and bus registrations account for 38% of total world truck and bus registrations.
- The average U.S. household vehicle travels 11,300 miles per year (2009 NHTS).

Heavy Truck Characteristics

- 10,659,000 heavy trucks were registered in the U.S. in 2012.
- In 2002 (the last time a survey was conducted), heavy trucks accounted for 80% of medium and heavy truck fuel use.

Note: Data are for calendar year 2012 or 2013 unless otherwise noted.

DOCUMENT AVAILABILITY

Reports produced after January 1, 1996, are generally available free via the U.S. Department of Energy (DOE) Information Bridge:

Website: <http://www.osti.gov/bridge>

Reports produced before January 1, 1996, may be purchased by members of the public from the following source:

National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161
Telephone: 703-605-6000 (1-800-553-6847)
TDD: 703-487-4639
Fax: 703-605-6900
E-mail: info@ntis.fedworld.gov
Website: <http://www.ntis.gov/support/ordernowabout.htm>

Reports are available to DOE employees, DOE contractors, Energy Technology Data Exchange (ETDE) representatives, and International Nuclear Information System (INIS) representatives from the following source:

Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831
Telephone: 865-576-8401
Fax: 865-576-5728
E-mail: reports@adonis.osti.gov

FOREWORD

Welcome to this 33rd edition of the Transportation Energy Data Book. Twenty-four editions of this Data Book have been produced by Stacy Davis; DOE is grateful for the dedication, consistency, and skill she has brought to this effort.

I would like to bring to your attention some of the data that are new in this edition:

- **Tables 3.8 and 3.9** have 2013 data on the cars and trucks in operation by age.
- **Tables 4.7 – 4.14** have been changed significantly due to changes in the source data. The Environmental Protection Agency (EPA) changed the vehicle classifications, combining wagons with the rest of the cars and dropping the small, medium, large categories of cars, pickups, sport-utilities, and vans. The fuel economy displayed in those tables has been adjusted by the EPA to provide the best estimate of real-world performance.
- **Figure 5.1**, which is the distribution of trucks over 26,000 lbs. by vehicle-miles traveled, now includes a graph on all trucks in addition to the <2-year old trucks.
- **Tables 5.14-5.17** show data from the newly released 2012 Commodity Flow Survey (CFS) in comparison with previous CFS data.
- **Tables 6.3 and 6.4** were split from one table in last year's edition because there are so many alternative fuel vehicles in model year 2014.
- **Table 6.7** names the model year 2014 electric-drive medium/heavy trucks and buses.
- **Figure 6.2** shows the top ten natural gas-producing countries, along with the natural gas reserves of those countries.
- **Figure 11.2** displays data on greenhouse gas emissions from the latest GREET model.
- **Tables 12.13 and 12.14** present information on the Tier 3 emission standards which were finalized in April 2014.

I hope you find value in this data book. Stacy and I welcome suggestions on how to improve it.

Jacob W. Ward
 Analysis Manager, Vehicle Technologies Office
 U.S. Department of Energy

ACKNOWLEDGMENTS

The authors would like to express their gratitude to the many individuals who assisted in the preparation of this document. First, we would like to thank Jacob Ward and the Vehicle Technologies Office staff for their continued support of the Transportation Energy Data Book project. We would also like to thank Mark Robbins for the cover. This book would not have been possible without the dedication of Debbie Bain, who has masterfully prepared the manuscript since 1998.

This book would not be possible without the leadership, guidance, and vision of Phil Patterson, who began this book in the 1970's. We hope to continue this report into the future with the same level of excellence. The authors and the transportation research community will be forever grateful for his efforts.

ABSTRACT

The *Transportation Energy Data Book: Edition 33* is a statistical compendium prepared and published by Oak Ridge National Laboratory (ORNL) under contract with the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Vehicle Technologies Office. Designed for use as a desk-top reference, the Data Book represents an assembly and display of statistics and information that characterize transportation activity, and presents data on other factors that influence transportation energy use. The purpose of this document is to present relevant statistical data in the form of tables and graphs. The latest edition of the Data Book is available to a larger audience via the Internet (cta.ornl.gov/data).

This edition of the Data Book has 12 chapters which focus on various aspects of the transportation industry. Chapter 1 focuses on petroleum; Chapter 2 – energy; Chapter 3 – highway vehicles; Chapter 4 – light vehicles; Chapter 5 – heavy vehicles; Chapter 6 – alternative fuel vehicles; Chapter 7 – fleet vehicles; Chapter 8 – household vehicles; Chapter 9 – nonhighway modes; Chapter 10 – transportation and the economy; Chapter 11 – greenhouse gas emissions; and Chapter 12 – criteria pollutant emissions. The sources used represent the latest available data. There are also three appendices which include detailed source information for some tables, measures of conversion, and the definition of Census divisions and regions. A glossary of terms and a title index are also included for the reader's convenience.

INTRODUCTION

In January 1976, the Transportation Energy Conservation (TEC) Division of the Energy Research and Development Administration contracted with Oak Ridge National Laboratory (ORNL) to prepare a Transportation Energy Conservation Data Book to be used by TEC staff in their evaluation of current and proposed conservation strategies. The major purposes of the Data Book were to draw together, under one cover, transportation data from diverse sources, to resolve data conflicts and inconsistencies, and to produce a comprehensive document. The first edition of the TEC Data Book was published in October 1976. With the passage of the Department of Energy (DOE) Organization Act, the work being conducted by the former Transportation Energy Conservation Division fell under the purview of the DOE's Office of Transportation Programs. This work continues today in the Vehicle Technologies Office.

Policymakers and analysts need to be well-informed about activity in the transportation sector. The organization and scope of the data book reflect the need for different kinds of information. For this reason, Edition 33 updates much of the same type of data that is found in previous editions.

In any attempt to compile a comprehensive set of statistics on transportation activity, numerous instances of inadequacies and inaccuracies in the basic data are encountered. Where such problems occur, estimates are developed by ORNL. To minimize the misuse of these statistics, an appendix (Appendix A) is included to document the estimation procedures. The attempt is to provide sufficient information for the conscientious user to evaluate the estimates and to form their own opinions as to their utility. Clearly, the accuracy of the estimates cannot exceed the accuracy of the primary data, an accuracy which in most instances is unknown. In cases where data accuracy is known or substantial errors are strongly suspected in the data, the reader is alerted. In all cases it should be recognized that the estimates are not precise.

The majority of the statistics contained in the data book are taken directly from published sources, although these data may be reformatted for presentation by ORNL. Consequently, neither ORNL nor DOE endorses the validity of these data.

Chapter 1

Petroleum

Summary Statistics from Tables/Figures in this Chapter

Table 1.13	Net imports as a percentage of U.S. petroleum consumption, 2013	32.8%
Table 1.14	Transportation share of U.S. petroleum consumption, 2013	68.9%
Table 1.17	Highway share of transportation petroleum consumption, 2012	85.9%
Table 1.17	Light vehicle share of transportation petroleum consumption, 2012	63.6%

In this document, petroleum is defined as crude oil (including lease condensate) and natural gas plant liquids.

^a Because other liquids and processing gain are not included, the world production is smaller than world petroleum consumption.

As new technologies appear and new areas are explored, the amount of proved reserves of crude oil and natural gas has grown. Although the reserves of natural gas in the United States were 66% higher in 2012 than it was in 1980, the U.S. share of World natural gas reserves is lower. The U.S. share of crude oil reserves has been under 2% since 2003.

Table 1.1
Proved Reserves of Crude Oil and Natural Gas, 1980–2012

Year	Crude Oil Reserves (billion barrels)		U.S. Share of Crude Oil Reserves	Natural Gas Reserves (trillion cubic feet)		U.S. Share of Natural Gas Reserves

U.S. Department of Energy, Energy Information Administration, International Energy Statistics, April 2014.

In 2013, the Organization of Petroleum Exporting Countries (OPEC) accounted for 42.5% of world oil production. The U.S. production of crude oil increased to 7.46 million barrels per day, which is the highest production since 1989. The U.S. production is 9.8% of World production.

^a Includes lease condensate. Excludes natural gas plant liquids.

^b See Glossary for membership.

This table shows petroleum production, which includes both crude oil and natural gas plant liquids. Because other liquids and processing gain are not included, the world total is smaller than world petroleum consumption (Table 1.4). The United States was responsible for 11.7% of the world's petroleum production in 2013 and 9.8% of the world's crude oil production (Table 1.2).

Table 1.3

^a Includes natural gas plant liquids, crude oil and lease condensate. Does not account for all inputs or refinery processing gain.

^b Organization of Petroleum Exporting Countries. See Glossary for membership.

During the 1980s and 1990s, the United States accounted for about one-quarter of the world's petroleum consumption, but since 2000 that share has been decreasing. In 2011 the United States accounted for only 21.6%. World petroleum consumption decreased in 2009 but rose in 2010. Non-OECD consumption has continued to increase.

The share of petroleum imported to the United States can be calculated using total imports or net imports. Net imports, which are the preferred data, rose to over 50% of U.S. petroleum consumption for the first time in 1998, while total imports reached 50% for the first time in 1993. OPEC share of net imports has been below 50% since 1993. Net imports as a share of consumption decreased to 32.8% in 2013—the lowest since 1985.

^b Data are not available.

Just over half of the oil imported to the United States in 2013 was from the western hemisphere. Canada, Mexico, and Venezuela provided most of the oil from the western hemisphere, along with small amounts from Brazil, Columbia, Ecuador, and the U.S. Virgin Islands (these countries are not listed separately).

The Strategic Petroleum Reserve (SPR) began in October 1977 as a result of the 1975 Energy Policy and Conservation Act. Its purpose is to provide protection against oil supply disruptions. The U.S. consumed nearly 19 million barrels per day in 2013. At that rate of consumption, the SPR supply would last 37 days if used exclusively and continuously.

^a Other crude oil stocks include stocks held by petroleum companies, as well as stocks of Alaskan crude oil in transit.

^b Strategic Petroleum Reserves divided by U.S. consumption per day. This would only hold true if the SPR were the only oil used for that many days.

Major oil price shocks have disrupted world energy markets five times in the past 30 years (1973-74, 1979-80, 1990-91, 1999-2000, 2008). Most of the oil price shocks were followed by an economic recession in the United States.

Source:

Greene, D.L. and N. I. Tishchishyna, *Costs of Oil Dependence: A 2000 Update*, Oak Ridge National Laboratory, ORNL/TM-2000/152, Oak Ridge, TN, 2000, and data updates, 2013. (Additional resources: cta.ornl.gov/cta/publications.shtml)

The United States has long recognized the problem of oil dependence and the economic problems that arise from it. According to Oak Ridge National Laboratory (ORNL) researchers Greene and Hopson, oil dependence is a combination of four factors: (1) a noncompetitive world oil market strongly influenced by the OPEC cartel, (2) high levels of U.S. imports, (3) the importance of oil to the U.S. economy, and (4) the lack of economical and readily available substitutes for oil. ORNL developed a model to estimate the historical cost of oil dependence and analyze the potential effectiveness of policies on likely future costs. The most recent study using this model shows that the U.S. economy suffered the greatest losses in 2008 when wealth transfer and GDP losses (combined) amounted to approximately half a trillion dollars. However, when comparing oil dependence to the size of the economy, the year 1980 is the highest. Oil dependence costs were almost 5% of GDP in 1980, but were 6% in 2008. In 2009, the average oil price fell to about \$60 per barrel and oil dependence costs fell to about \$300 billion for 2009 and 2010. However, the cost rose again in 2011 and 2012.

Figure 1.4. Costs of Oil Dependence to the U.S. Economy, 1970–2012

Notes:

Wealth Transfer is the product of total U.S. oil imports and the difference between the actual market price of oil (influenced by market power) and what the price would have been in a competitive market.

Dislocation Losses are temporary reductions in GDP as a result of oil price shocks.

Loss of Potential Gross Domestic Product (GDP) results because a basic resource used by the economy to produce output has become more expensive. As a consequence, with the same endowment of labor, capital, and other resources, our economy cannot produce quite as much as it could have at a lower oil price.

Other parts of the world refine crude oil to produce more diesel fuel and less gasoline than does North America. The OECD Europe countries produce the lowest share of gasoline in 2013.

^a Includes jet kerosene and other kerosene.

^b Includes motor gasoline, jet gasoline, and aviation gasoline.

^c Organization for Economic Cooperation and Development. See Glossary for membership.

Oxygenate refinery input increased significantly in 1995, most certainly due to the Clean Air Act Amendments of 1990 which mandated the sale of reformulated gasoline in certain areas beginning in January 1995. The use of MTBE has declined in recent years due to many states banning the additive. The other hydrocarbons and liquids category includes unfinished oils, motor gasoline blending components and aviation gasoline blending components.

^a Methyl tertiary butyl ether (MTBE).

^b Includes methanol and other oxygenates.

^c Reported in “Other” category in this year.

^d Data are not available.

When crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input, a processing volume gain occurs. Due to this gain, the product yield from a barrel of crude oil is more than 100%. The processing volume gain has been growing over the years.

^a Includes aviation gasoline (0.1%), kerosene (0.1%), residual fuel oil (2.9%), naphtha and other oils for petrochemical feedstock use (1.5%), other oils for petrochemical feedstock use (0.6%), special naphthas (0.3%), lubricants (1.0%), waxes (0.1%), petroleum coke (5.5%) asphalt and road oil (2.0%), still gas (4.4%), and miscellaneous products (0.5%).

^b Products sum greater than 100% due to processing gain. The processing gain for years 1978 to 1980 is assumed to be 4 percent.

Domestic petroleum production increased in 2009 for the first time in 20 years and has continued to increase. Most of the petroleum imported by the United States is in the form of crude oil. The United States does export small amounts of petroleum, mainly refined petroleum products which go to Canada and Mexico.

U.S. Department of Energy, Energy Information Administration, *Monthly Energy Review*, April 2014, Tables 2.5, 3.1, and A3. (Pre-1973 data from the *Annual Energy Review*). World petroleum consumption - U.S. Department of Energy, Energy Information Administration, *International Energy Statistics Website*, May 2013. (Additional resources: www.eia.doe.gov)

^a Total domestic production includes crude oil, natural gas plant liquids and small amounts of other liquids.

^b Data are not available.

Before 1989 the U.S. produced enough petroleum to meet the needs of the transportation sector, but was still short of meeting the petroleum needs of all the sectors, including industrial, residential and commercial, and electric utilities. In 1973 the gap between what the U.S. produced and what was consumed was 5.6 million barrels per day. By 2040, the gap is expected to be at least 6.0 million barrels per day if all sources of petroleum are included or 7.3 million barrels per day if only conventional petroleum sources are used.

Figure 1.6. United States Petroleum Production and Consumption – All Sectors, 1973–2040

Notes: The U.S. Production has two lines after 2011. The solid line is conventional sources of petroleum, including crude oil, natural gas plant liquids, and refinery gains. The dashed line adds in other non-petroleum sources, including ethanol, biomass, liquids from coal, other blending components, other hydrocarbons, and ethers.

The sharp increase in values between 2006 and 2007 is the result of the FHWA’s methodology change. The data change from historical to projected values occurs between 2012 and 2013.

Source:

See Table 1.12, 2.7 and 2.8. Projections are from the Energy Information Administration, *Annual Energy Outlook 2014*, May 2014.

In 1989 the transportation sector petroleum consumption surpassed U.S. petroleum production for the first time, creating a gap that must be met with imports of petroleum. In 2009, however, the U.S. production of petroleum began to increase. The Energy Information Administration expects petroleum production to be nearly equal to transportation consumption by about 2020. When including non-petroleum sources, the production will exceed transportation demand.

Figure 1.7. United States Petroleum Production and Transportation Consumption, 1970–2040

Notes: The U.S. Production has two lines after 2011. The solid line is conventional sources of petroleum, including crude oil, natural gas plant liquids, and refinery gains. The dashed line adds in other non-petroleum sources, including ethanol, biomass, liquids from coal, other blending components, other hydrocarbons, and ethers.

The sharp increase in values between 2012 and 2013 are caused by the data change from historical to projected values. The sharp increase in the value for heavy trucks between 2006 and 2007 is the result of the FHWA's methodology change.

Source:

See Table 1.12, 2.7 and 2.8. Projections are from the Energy Information Administration, *Annual Energy Outlook 2014*, May 2014.

Transportation accounted for almost 70% of the U.S. petroleum use from 2008 to 2013. Total petroleum consumption reached more than 20 million barrels per day from 2003 to 2007, but has been below that level from 2008 through present.

See Appendix A for Highway Energy Use.

^a Each gallon of petroleum product was assumed to equal one gallon of crude oil. The oil used to produce electricity is also estimated. See Appendix A, p. 23 for details.

^b Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).

^c Due to changes in the FHWA fuel use methodology, motorcycle, bus, and heavy truck data are not comparable with data before the year 2007. Car and light truck data changed after 2008; see Appendix A for car/light truck shares.

Although about 19% of transportation energy use is for nonhighway modes, only 14% of transportation petroleum use is for nonhighway. This is because some nonhighway modes, such as pipelines and transit rail, use electricity. An estimate for the petroleum used to make electricity is included in the data. See Table 2.8 for nonhighway transportation energy use in trillion Btu.

Petroleum accounted for 34% of the world's energy use in 2011. Though petroleum is the dominant energy source for OECD countries, the non-OECD countries rely on coal and petroleum.

Figure 2.1. World Consumption of Primary Energy, 2011

Source:

U.S. Department of Energy, Energy Information Administration, *International Energy Statistics Database*, April 2014. (Additional resources: www.eia.doe.gov)

Total energy use was 97.3 quads in 2013 with transportation using 27.0%. The Energy Information Administration includes renewable energy in each sector.

^a Electrical energy losses have been distributed among the sectors.

In transportation, the alcohol fuels blended into gasoline to make gasohol (10% ethanol or less) are counted under “renewables” and are not in with petroleum. The petroleum category, however, still contains other blending agents, such as MTBE, that are not actually petroleum, but are not broken out into a separate category.

Table 2.2
Distribution of Energy Consumption by Source, 1973 and 2013
(percentage)

^a In transportation, the petroleum category contains some blending agents which are not petroleum.

^b Includes supplemental gaseous fuels. Transportation sector includes pipeline fuel and natural gas vehicle use.

^c Includes electrical system energy losses.

Oxygenates are blended with gasoline to be used in conventional vehicles. The amount of oxygenate use dwarfs the alternative fuel use. Gasoline-equivalent gallons are used in this table to allow comparisons of different fuel types.

Table 2.3
Alternative Fuel and Oxygenate Consumption, 2005–2011
(thousand gasoline-equivalent gallons)

	2005	2006	2007	2008	2009	2010	2011

Total	4,923,590	4,849,594	5,476,783	7,197,439	8,099,342	9,255,356	9,990,729

Note: These are the latest data available from the Energy Information Administration.

Source:

U.S. Department of Energy, Energy Information Administration, Alternative Fuel Vehicle Data website, May 2013, www.eia.doe.gov/renewable. (Additional resources: www.eia.doe.gov)

^a Consumption includes gasoline portion of the mixture.

^b Vehicle consumption only; does not include power plant inputs.

^c Methyl Tertiary Butyl Ether. This category includes a very small amount of other ethers, primarily Tertiary Amyl Methyl Ether (TAME) and Ethyl Tertiary Butyl Ether (ETBE).

Ethanol is used as an oxygenate, blended with gasoline to be used as gasohol in conventional vehicles. The amount of ethanol used in gasohol dwarfs the amount used in E85. Production of E95 ended in 2000.

Table 2.4
Ethanol Consumption, 1995–2011
(thousand gallons)

	Ethanol blends		Ethanol in gasohol	Total
	E85	E95		
1995	166	970	934,615	935,751
2000	10,530	12	1,114,313	1,124,855

2009	71,213	0	7,343,133	7,414,346
2010	90,323	0	8,527,431	8,617,754
2011	137,165	0	8,563,841	8,701,006
2011 Percentage	1.6%	0.0%	98.4%	100.0%

Note: Gallons of E85 and E95 include the gasoline portion of the blended fuel. Although this estimate for ethanol blend consumption (E85 and E95) is the best available, it is based solely on data from selected fleets (federal and state governments, alternative fuel providers, and transit companies). The ethanol in gasohol column does not include gasoline.

Source:

U.S. Department of Energy, Energy Information Administration, Alternative Fuel Vehicle website data, Washington, DC, May 2013, website: www.eia.doe.gov/renewable/afv/index.cfm. (Additional resources: www.eia.doe.gov)

As data about alternative fuel use become available, an attempt is made to incorporate them into this table. Sometimes assumptions must be made in order to use the data. Please see Appendix A for a description of the methodology used to develop these data. See Table 1.17 for transportation petroleum use in thousand barrels per day.

Source:

See Appendix A for Highway Energy Use.

^a Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles). These data have been revised due to a new data series for recreational boats.

^b Due to changes in the FHWA fuel use methodology, motorcycle, bus, and heavy truck data are not comparable with data before the year 2007. Car and light truck data changed after 2008; see Appendix A for car/light truck shares.

About 19% of transportation energy use is for nonhighway modes. Air travel accounts for almost 43% of nonhighway energy use. See Table 1.16 for nonhighway petroleum use in thousand barrels per day.

See Appendix A for Nonhighway Energy Use.

^a Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).

The Environmental Protection Agency's NONROAD2008a model estimates fuel use for different types of equipment and off-highway vehicles. Most of these vehicles/equipment use diesel fuel. Recreational equipment, such as off-highway motorcycles, snowmobiles, and ATVs, are mainly fueled by gasoline.

Table 2.9
Off-Highway Transportation-Related Fuel Consumption from the Nonroad Model, 2012
(trillion Btus)

	Gasoline	Diesel	LPG	CNG	Total
Agricultural equipment <i>Tractors, mowers, combines, balers, and other farm equipment which has utility in its movement.</i>	8.5	576.7	0.0	0.0	585.2
Airport ground equipment	0.3	15.1	0.2	^a	15.6
Construction and mining equipment <i>Pavers, rollers, drill rigs, graders, backhoes, excavators, cranes, mining equipment</i>	11.3	924.6	1.9	^a	937.8
Industrial equipment <i>Forklifts, terminal tractors, sweeper/scrubbers</i>	7.1	120.8	200.4	15.3	343.6

^a There is no equipment listed for this fuel type.

Mowing equipment consumes nearly half of all the fuel used by lawn and garden equipment. The gasoline used in lawn and garden equipment is 2.0% of total gasoline use.

Source:

U.S. Environmental Protection Agency, NONROAD2008a Model, www.epa.gov/oms/nonrdmdl.htm.

^a Numbers may not sum due to rounding.

^b Includes equipment such as aerators, dethatchers, sod cutters, hydro-seeders, turf utility vehicles, golf course greens mowers, and sand trap groomers.

^c Includes equipment not otherwise classified such as augers, sickle-bar mowers, and wood splitters.

The Federal Highway Administration (FHWA) cautions that data from 1993 on may not be directly comparable to earlier years. Some states have improved reporting procedures in recent years, and the estimation procedures were revised in 1994. The FHWA no longer publishes separate estimates of gasohol or ethanol used in gasohol. See Table 2.3 for details on oxygenate usage.

^a Consists primarily of diesel fuel, with small quantities of other fuels, such as liquefied petroleum gas and E85.

Great care should be taken when comparing modal energy intensity data among modes. Because of the inherent differences among the transportation modes in the nature of services, routes available, and many additional factors, it is not possible to obtain truly comparable national energy intensities among modes. These values are averages, and there is a great deal of variability even within a mode.

Table 2.12
Passenger Travel and Energy Use, 2012

	Number of vehicles (thousands)	Vehicle-miles (millions)	Passenger-miles (millions)	Load factor (persons/vehicle)	Energy intensities		Energy use (trillion Btu)

See Appendix A for Passenger Travel and Energy Use.

^a Includes passenger cars, vans, and small buses operating in response to calls from passengers to the transit operator who dispatches the vehicles.

^b Data are not available.

^c Energy use is estimated.

^d Only domestic service and domestic energy use are shown on this table. (Previous editions included half of international energy.) These energy intensities may be inflated because all energy use is attributed to passengers—cargo energy use is not taken into account.

Great care should be taken when comparing modal energy intensity data among modes. Because of the inherent differences among the transportation modes in the nature of services, routes available, and many additional factors, it is not possible to obtain truly comparable national energy intensities among modes. These values are averages, and there is a great deal of variability even within a mode.

	<i>Cars (years)</i>	11.4
	<i>Light trucks (years)</i>	11.3
	<i>All light vehicles (years)</i>	11.4

The top countries producing the world's cars and trucks have changed over the last ten years. In 2012, China was the largest producer of cars and trucks. In 2000, Japan produced the most cars and the United States produced the most trucks (includes light trucks).

Table 3.1
World Production of Cars and Trucks, 2000 and 2012
(thousands)

Cars	2000	2012	Percent change 2000-2012
China	605	10,705	1,670%

Source:

Ward's Communications, Ward's World Motor Vehicle Data, 2013 Edition, Southfield, MI, 2013, pp. 283-288 and annual. (Additional resources: www.wardsauto.com)

^a Includes all trucks and buses. In the United States, light trucks, such as pickups, vans, and sport-utility vehicles are included with trucks.

Use caution comparing historical data because of disconnects in data series. Also, the United States is unique in how many light trucks (SUVs, minivans, pickups) are used for personal travel. Those light trucks are not included on this table. The U.S. share of world cars continues to decline. The growth in the World total comes mainly from developing countries, like China, Indonesia, India, and South Korea.

VEHICLES IN USE

Both the Federal Highway Administration (FHWA) and The Polk Company report figures on the car and truck population each year. The two estimates, however, differ by as much as 11.2% (1981). The differences can be attributed to several factors:

- The FHWA data include all vehicles which have been registered at any time throughout the calendar year. Therefore, the data include vehicles which were retired during the year and may double count vehicles which have been registered in different states or the same states to different owners. The Polk Company data include only those vehicles which are registered on July 1 of the given year.
- The classification of mini-vans, station wagons on truck chassis, and utility vehicles as cars or trucks causes important differences in the two estimates. The Polk Company data included passenger vans in the car count until 1980; since 1980 all vans have been counted as trucks.
- Starting in 1993, the FHWA reclassified some minivans and sport utility vehicles into the truck category which were previously included with cars. This change produced a dramatic change in the individual percentage differences of cars and trucks. The difference in total vehicles has been less than 5% each year since 1990 and does not appear to be significantly affected by the FHWA reclassifications. Beginning with 2009, the FHWA discontinued the car/2-axle, 4-tire truck designations on Table VM-1. The data since 2009 come from Tables MV-1 and MV-9.
- The FHWA data include all non-military Federal vehicles, while The Polk Company data include only those Federal vehicles which are registered within a state. Federal vehicles are not required to have State registrations, and, according to the General Services Administration, most Federal Vehicles are not registered.
- In 2012 both Polk and FHWA changed their methodologies for the car/light truck split which created a significant decrease in the number of cars reported and a corresponding increase in the number of light trucks.

In the early 1980's, researchers had to make a conscious choice of which data series to use, since they differed by as much as 11%. In 2005 the two sources differed by less than 1%. Both sources changed their methodologies for the car/light truck split causing significant decreases to the number of cars.

The graphs below show the number of motor vehicles per thousand people for various countries. The data for the United States are displayed in the line which goes from 1900 to 2012. The points labeled on that line show data for the other countries/regions around the world and how their vehicles per thousand people compare to the United States at two different points in time, 2002 and 2012. For instance, the graph shows that in 2002, Eastern Europe's vehicles per thousand people was about where the United States was in 1935, but by 2012 it is about where the United States was in 1950. The lower part of the graph (1900-1940) is shown enlarged on the facing page.

Figure 3.1. Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012)

Source:
See Tables 3.4 and 3.5.

Though some countries are listed separately in this table, those countries are also included in the regional total. For instance, China is listed separately, but is also included in the Asia, Far East region.

Table 3.5
Vehicles per Thousand People in Other Countries, 2002 and 2012

Country/Region	Vehicles per 1,000 people	
	2002	2012

The number of vehicles per thousand people in the United States has grown significantly from 1900 to 2007. In 2008 to 2012, however, the number decreased from a high of 844.54 in 2007. There was a slight increase in 2011, followed by another decrease in 2012.

(Additional resources: www.census.gov/ipc/www/idb/)

Vehicles – (2012) U.S.: U.S. Department of Transportation, Federal Highway Administration, *Highway Statistics 2012*, Washington, DC, 2014.

Total vehicle-miles traveled increased slightly from 2011 to 2012. The trend of using two-axle, four-tire trucks, such as pickups, vans, and sport-utility vehicles, for personal travel is evident in these data; two-axle, four-tire trucks account for 30.2% more travel in 2012 than in 1970, and cars account for 34.1% less travel in that time period.

Table 3.7
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2012

^a Due to FHWA methodology changes, data from 2007-on are not comparable with previous data.

In 1970 only 2.9% of the car population was 15 years old or older; by 2013 that number rose to nearly 20%.

^a Percentages may not sum to totals due to rounding.

^b Includes cars from model year 2002 and 2001 which were sold prior to July 1, 2002, and similarly, model years 1971 and 1970 sold prior to July 1, 1970. For 2013, cars sold prior to December 31, 2013 which were model year 2013, 2014 or 2015 were included.

The number of trucks in the United States has grown significantly since 1970, some of it due to the use of light trucks (pickups, vans, sport utility vehicles) as personal passenger vehicles. Those light trucks, as well as medium and heavy trucks, are included in the data. In 1970 about 15% of trucks were age 15 or older; by 2013, that increased to 20.8%.

^b Includes trucks from model year 2002 and 2001 which were sold prior to July 1, 2002, and similarly, model years 1971 and 1970 sold prior to July 1, 1970.

The average age of cars and light trucks has continued to grow in recent years. Light trucks, which include pickups, vans, and sport utility vehicles, typically have a lower average age than cars. In 2013, however, there is a very small difference.

Table 3.10

^a Light trucks are trucks less than 10,000 lbs. gross vehicle weight.

^b It was assumed that scrappage for vehicles less than 4 years old is 0.

^c The percentage of light trucks which will be in use during the year.

^d The percentage of light trucks which will be retired from use at the end of the year.

Using current registration data and a scrappage model by Greenspan and Cohen [1996 paper: www.federalreserve.gov/pubs/feds/1996/199640/199640pap.pdf], ORNL calculated heavy truck (trucks over 26,000 lbs. gross vehicle weight) scrappage rates. The expected median lifetime for a 1990 model year heavy truck is 29 years. These data are fitted model values which assume constant economic conditions.

	<i>Car fuel economy, MY 2013</i>	36.0
	<i>Light truck standard, MY 2013 (unreformed)</i>	25.7
	<i>Light truck fuel economy, MY 2013</i>	25.3
Table 4.27	Average fuel economy loss from 50 to 70 mph	24.5%

Car registrations, along with vehicle travel and fuel use, all declined from 2008 to 2012. The data in this table from 1985–on DO NOT include minivans, pickups, or sport utility vehicles. Much of the data for 2009–on were estimated; the FHWA no longer publishes travel and fuel data for cars.

Table 4.1
Summary Statistics for Cars, 1970–2012

Year	Registrations ^a (thousands)	Vehicle travel (billion miles)	Miles (per vehicle)	Fuel use (million gallons)	Fuel economy ^b (miles per gallon)

1970–2008: U.S. Department of Transportation, Federal Highway Administration, *Highway Statistics 2009*, Washington, DC, 2011, Table MV-9. Previous years Table VM-1. 2009-on: See Appendix A for Car/Light Truck Shares. (Additional resources: www.fhwa.dot.gov)

^a Beginning in this year the data were revised to include all vans (including mini-vans), pickups and sport utility vehicles.

^b Due to FHWA methodology changes, data from 2009-on are not comparable with previous data.

Because data on Class 2b trucks are scarce, the U.S. DOE funded a study to investigate available sources of data. In the final report, four methodologies are described to estimate the sales of Class 2b trucks. Until another study is funded, the 1999 data are the latest available.

Table 4.3
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks

	CY 1999 truck sales (millions)	MY 2000 truck population (millions)	Percent diesel trucks in population	Average age (years)	Estimated annual miles ^a (billions)	Estimated fuel use (billion ^a gallons)	Estimated fuel economy (miles per gallon)
Class 1	5.7	49.7	0.3%	7.3	672.7	37.4	18.0
Class 2a	1.8	19.2	2.5%	7.4	251.9	18.0	14.0
Class 2b	0.5	5.8	24.0%	8.6	76.7	5.5	13.9

Davis, S.C. and L.F. Truett, *Investigation of Class 2b Trucks (Vehicles of 8,500 to 10,000 lbs GVWR)*, ORNL/TM-2002/49, March 2002, Table 1.

^a Estimates derived using 2000 population data and 1997 usage data. See source for details.

Car sales in 2009 and 2010 were below 6 million but increased to more than 7 million by 2012. In 1980, the Big 3 (Chrysler, Ford and General Motors) held 73.8% of the market; by 2013, that had dropped to 32.4%.

Table 4.5
New Retail Car Sales in the United States, 1970–2013

(Additional resources: www.wardsauto.com)

^a Includes all trucks of 10,000 pounds gross vehicle weight and less sold in the United States.

^b Excluding transplants.

^c Big 3 includes Chrysler, Ford and General Motors.

^d Based on model year factory installations.

^e Light-duty vehicles include cars and light trucks.

^f Indicates less than 1 percent.

The production-weighted fuel economy of cars increased dramatically from 1975 (13.5 mpg) to 1985 (23.0 mpg), but rose only 0.5 mpg from 1985 to 2005. Since 2005, fuel economy rose 4.5 mpg—from 23.5 mpg in 2005 to 28.0 mpg in 2013. The fuel economy values have been adjusted to provide the best estimate of real world performance.

^a The fuel economy data on this table are adjusted to provide the best estimate of real world performance. See section 10 of the source document for details on adjustment methodology.

^b Production share is based on total of cars plus car SUVs. Percentages may not sum to totals due to rounding.

A new vehicle classification was created to match the Corporate Average Fuel Economy (CAFE) methodology. Under CAFE, small, two-wheel drive sport utility vehicles will be held to the same standards as cars. The Environmental Protection Agency has defined these vehicles as “car SUVs.” The vehicles below make up this category.

Table 4.8
Definition of Car Sport Utility Vehicles in Model Year 2013

Acura RDX 2WD	Jeep Compass 2WD
Buick Encore	Jeep Patriot 2WD
Cadillac SRX 2WD	Kia Sorento 2WD
Cadillac SRX AWD	Kia Sorento 4WD
Chevrolet Captiva AWD	Kia Sportage 2WD
Chevrolet Captiva FWD	Lexus RX 350
Chevrolet Equinox AWD	Lexus RX 450h
Chevrolet Equinox FWD	Mazda CX-5 2WD
Dodge Journey FWD	Mercedes-Benz GLK 350
Ford Edge FWD	Mitsubishi Outlander 2WD
Ford Escape FWD	Mitsubishi Outlander Sport 2WD
Ford Transit Connect Wagon FWD	Nissan Murano FWD
GMC Terrain AWD	Nissan Rogue FWD
GMC Terrain FWD	Nissan XTERRA 2WD
Honda Crosstour 2WD	Suzuki Grand Vitara
Honda Crosstour 4WD	Toyota FJ Cruiser 2WD
Honda CR-V 2WD	Toyota RAV4
Hyundai Santa Fe 2WD	Toyota Venza
Hyundai Santa Fe Sport 2WD	Volvo XC60 FWD
Hyundai Tucson 2WD	Volvo XC70 FWD
Infiniti JX35 FWD	VW Tiguan

Note: 2WD = Two-wheel drive. 4WD = Four-wheel drive. FWD = Front-wheel drive.

Production of sport utility vehicles (SUVs) has grown substantially since 1975. The production-weighted fuel economy of SUVs was more than 20 mpg in 2013. Nearly 60% of all light trucks produced in 2013 were SUVs.

Source:

U.S. Environmental Protection Agency, *Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2013*, December 2013. (Additional resources: www.epa.gov/fueleconomy/fetrends/1975-2013/420r13011.pdf)

^a The fuel economy data on this table are adjusted to provide the best estimate of real world performance. See section 10 of the source document for details on adjustment methodology.

^b Production share is based on the total of pickups, plus vans and truck SUVs. Percentages may not sum to totals due to rounding.

The average fuel economy of cars more than doubled from 1975 to 2013 while the average fuel economy of light trucks grew by 70% in that same time period. This was not steady annual growth, but growth in the 1970's and early 1980's followed by a long period with little improvement. Growth resumed around 2008-2009.

^a The fuel economy data on this table are adjusted to provide the best estimate of real world performance. See section 10 of the source document for details on adjustment methodology.

Back in 1975 only 19.3% of new light vehicles produced were light trucks. Because of the boom in production of minivans, sport utility vehicles, and pick-up trucks, that number rose to over 40% from 1998 to 2008. Cars made a comeback to account for 64.4% in 2013.

The effects of the Japanese earthquake/tsunami in 2011 are apparent in the large decline in car production for that year. Light trucks were gaining market share from the early 1980s until 2004, mainly due to increases in the market share of sport utility vehicles (SUVs) and pickup trucks. A new category of SUVs has been added to the vehicle classification—car SUVs. The car SUVs are two-wheel drive SUVs that will be counted as cars in the Corporate Average Fuel Economy Standards for model years 2011-on. A listing of the makes/models of car SUVs is in Table 4.8.

Figure 4.1. Light Vehicle Production Shares, Model Years 1975–2013

Source:
See Table 4.11.

The production-weighted average engine displacement of cars in 1975 was 4.73 liters, but had declined to 2.43 liters by 2013. Car SUVs also experienced a decline in engine displacement. For a list of car SUVs, see Table 4.8.

Number of dealers - National Automobile Dealers Association website, www.nada.org. (Additional resources: www.nada.org/Publications/NADADATA/) Light-duty vehicle sales - See tables 4.5 and 4.6.

^a As of the beginning of the year.

In 2010 the number of conventional refueling stations fell below 160,000 for the first time in the series history and continued to decline through 2012. The number of vehicles fueling at those stations fell in 2009 for the first time in several years but began rising slowly in 2011. In 2012, there were 0.62 fueling stations per thousand vehicles or 1.61 thousand vehicles per station.

Table 4.17
Conventional Refueling Stations, 1993-2012

Year	Number of retail outlets	Vehicles in	Stations per thousand vehicles	Thousand vehicles per station
		operation (thousands)		
Conventional fuels				
1993	207,416	186,315	1.11	0.90
1994	202,878	188,714	1.08	0.93

2009	162,350	248,972	0.65	1.53
2010	159,006	248,231	0.64	1.56
2011	157,393	248,932	0.63	1.58
2012	156,065	251,497	0.62	1.61

Notes: The County Business Patterns (CBP) data published by the Bureau of the Census tells the number of establishments by North American Industry Classification System (NAICS). NAICS is an industry classification system that groups establishments into industries based on the activities in which they are primarily engaged. NAICS 447 represents gasoline stations. However, the CBP gasoline station data differ from the National Petroleum News Survey data by as much as 30% (117,189 stations in 2005); the CBP may not include every gasoline retail outlet due to the classification of the primary activity of the business.

Alternative Fuel Refueling Stations are listed in Chapter 6.

2022	164	237	190
2023	157	225	180
2024	150	214	171
2025	143	203	163

Note: The required fuel economy, along with projections of CO₂ emissions, shown here use a model year 2008 baseline. The presented rates of increase in stringency for NHTSA CAFE standards are lower than the Environmental Protection Agency (EPA) rates of increase in stringency for greenhouse gas (GHG) standards. One major difference is that NHTSA's standards, unlike EPA's, do not reflect the inclusion of air conditioning system refrigerant and leakage improvements, but EPA's standards would allow consideration of such improvements which reduce GHGs but generally do not affect fuel economy. The 2025 EPA GHG standard of 163 grams/mile would be equivalent to 54.5 mpg, if the vehicles were to meet this level all through fuel economy improvements. The agencies expect, however, that a portion of these improvements will be made through reductions in air conditioning leakage, which would not contribute to fuel economy.

Federal Register, Vol. 77, No. 199, October 15, 2012. (Additional resources: www.nhtsa.dot.gov/fuel-economy)

The target levels for the fuel economy and carbon dioxide emission standards for vehicles manufactured in model years 2012-on are assigned based on a vehicle's "footprint." Each footprint has a different target. The vehicle footprint is calculated as:

$$\text{footprint} = \text{track width} \times \text{wheelbase},$$

where

track width = lateral distance between the centerlines of the base tires at ground, and
wheelbase = longitudinal distance between the front and rear wheel centerlines.

Table 4.19
Fuel Economy and Carbon Dioxide Targets for Model Year 2025

Vehicle type	Example models	Example model footprint (square feet)	CO ₂ emissions target (grams per mile)	Fuel economy target (miles per gallon)
Example Passenger Cars				
Compact car	Honda Fit	40	131	61.1
Midsized car	Ford Fusion	46	147	54.9
Fullsize car	Chrysler 300	53	170	48.0
Example Light-Duty Trucks				
Small SUV	4WD Ford Escape	44	170	47.5
Midsized crossover	Nissan Murano	49	188	43.4
Minivan	Toyota Sienna	55	209	39.2
Large pickup truck	Chevy Silverado	67	252	33.0

Note: Examples use model year 2012 vehicle specifications. The fuel economy from this table will not match the fuel economy listed on the window sticker of a new vehicle. Window sticker fuel economy is calculated by a different methodology than the Corporate Average Fuel Economy.

Federal Register, Vol. 77, No. 199, October 15, 2012. (Additional resources: www.nhtsa.gov/fuel-economy)

The Corporate Average Fuel Economy standards were established by the U.S. Energy Policy and Conservation Act of 1975 (PL94-163). These standards must be met at the manufacturer level. Some manufacturers fall short of meeting the standards while others exceed them. Legislation passed in December 2007 changed the CAFE standards beginning in the 2011 model year (MY). Some two-wheel drive sport utility vehicles are classified as cars under the final standards for MY 2011-2021.

^a Only vehicles with at least 75% domestic content can be counted in the average domestic fuel economy for a manufacturer.

^b Represents two- and four-wheel drive trucks combined. Gross vehicle weight of 0-6,000 pounds for model year 1978-1979 and 0-8,500 pounds for subsequent years.

^c Model year as determined by the manufacturer on a vehicle by vehicle basis.

^d All CAFE calculations are sales-weighted.

^e Standards were set for two-wheel drive and four-wheel drive light trucks, but no combined standard was set in this year.

^f Data are not available.

^g Unreformed standards, which were an option from 2008-2010. See Table 4.18 for reformed standards.

^h Projected required average fuel economy standards value based on pre-model year reports.

Manufacturers of cars and light trucks whose vehicles do not meet the CAFE standards are fined. Data from the National Highway Traffic Safety Administration show CAFE fine in the year in which the money was collected, which may not be the same year in which it was assessed. A manufacturer can also use CAFE credits to offset fines. Fines for recent model years are still being collected.

^a These are fines which are actually collected. Fines which are assessed in certain year may not have been collected in that year.

^b Adjusted using the Consumer Price Inflation Index.

Consumers must pay the Gas Guzzler Tax when purchasing a car that has an Environmental Protection Agency (EPA) fuel economy rating (combined city and highway) less than that stipulated in the table below. The Gas Guzzler Tax doubled in 1991 after remaining constant from 1986 to 1990. The tax has not changed since 1991. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans.

^a Tax is based on unadjusted combined fuel economy; adjusted combined fuel economy is used on window stickers.

The IRS collected \$73.5 million in 2012 from those buying cars with combined city/highway fuel economy less than 22.5 miles per gallon. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans. It is worthy to note that total revenue from fines paid by consumers to purchase gas-guzzling vehicles greatly exceeds the overall fines paid by manufacturers whose vehicles fail to meet CAFE standards (see 4.20).

^a Adjusted using the Consumer Price Inflation Index.

The Powertrain System Analysis Toolkit (PSAT) provides vehicle simulations for a variety of research purposes. It is used by the Department of Energy to evaluate the fuel efficiency potential of advanced powertrain configurations for different driving conditions. Recently, PSAT was used to develop data on the relationship between steady-state vehicle speed and fuel economy.

^a From Argonne National Laboratory Advanced Powertrain Research Facility (Vehicle Test Data).

The latest study of vehicle fuel economy by speed indicated higher fuel economy around 40 miles per hour, as did the 1973 and 1984 studies. Engineers at Oak Ridge National Laboratory believe that the lowest speed in the vehicle's highest gear is where the best fuel economy is typically obtained. That speed will be different for individual vehicles.

Table 4.27
Fuel Economy by Speed, 1973, 1984, 1997, and 2012 Studies

Source:
See Tables 4.26 and 4.27.

This table shows the driving cycles for the new methodology that the Environmental Protection Agency (EPA) used to determine fuel economy ratings for new vehicles beginning in model year 2008. In addition to the Urban Driving Cycle and the Highway Driving cycle, the EPA will also use three additional tests to adjust fuel economy ratings to account for higher speeds, air conditioner use, and colder temperatures. Though the EPA uses a complex combination of these five cycles to determine the fuel economy that will be posted on a new vehicle window sticker, the manufacturer's Corporate Average Fuel Economy is still calculated using only the city and highway driving cycles. To know more about new vehicle fuel economy ratings, visit www.fueleconomy.gov.

Table 4.28
Driving Cycle Attributes

Trip type	Test schedule				
	City	Highway	High speed	AC	Cold temp
	Low speeds in stop-and-go urban traffic	Free-flow traffic at highway speeds	Higher speeds; harder acceleration & braking	AC use under hot ambient conditions	City test w/colder outside temperature
Top speed	56 mph	60 mph	80 mph	54.8 mph	56 mph
Average speed	20 mph	48 mph	48 mph	22 mph	20 mph
Max. acceleration	3.3 mph/sec	3.2 mph/sec	8.46 mph/sec	5.1 mph/sec	3.3 mph/sec
Simulated distance	11 mi.	10 mi.	8 mi.	3.6 mi.	11 mi.
Time	31 min.	12.5 min.	10 min.	9.9 min.	31 min.
Stops	23	None	4	5	23
Idling time	18% of time	None	7% of time	19% of time	18% of time
Engine startup ^a	Cold	Warm	Warm	Warm	Cold
Lab temperature	68-86° F	68-86° F	68-86° F	95° F	20° F
Vehicle air conditioning	Off	Off	Off	On	Off

Source:

U.S. Department of Energy and U.S. Environmental Protection Agency, Fuel Economy website, www.fueleconomy.gov.

^a A vehicle's engine doesn't reach maximum fuel efficiency until it is warm.

These driving cycles simulate the performance of an engine while driving in the city and on the highway. Once the city cycle is completed, the engine is stopped, and then started again for the 8.5 minute hot start cycle. Three additional cycles also influence new vehicle fuel economy ratings beginning with the 2008 model year.

Figure 4.3. City Driving Cycle

Figure 4.4. Highway Driving Cycle

Source:

Code of Federal Regulations, 40CFR, "Subpart B - Fuel Economy Regulations for 1978 and Later Model Year Automobiles - Test Procedures," July 1, 1988 edition, p. 676.

Beginning with the 2008 model year, these cycles influence the new vehicle fuel economy ratings.

Figure 4.5. Air Conditioning (SC03) Driving Cycle

Figure 4.6. Cold Temperature (Cold FTP) Driving Cycle

Source:
U.S. Department of Energy and Environmental Protection Agency, Fuel Economy website, www.fueleconomy.gov.

Beginning with the 2008 model year, this cycle influences the new vehicle fuel economy ratings. The US06 driving cycle was originally developed as a supplement to the Federal Test Procedure. It is a short-duration cycle (600 seconds) which represents hard-acceleration driving.

Figure 4.7. High-Speed (US06) Driving Cycle

Source:

U.S. Department of Energy and Environmental Protection Agency, Fuel Economy website, www.fueleconomy.gov.

The Environmental Protection Agency also uses other driving cycles to test new vehicles (although these do not affect the fuel economy ratings). The New York Test Cycle was developed in the 1970's in order to simulate driving in downtown congested areas. The Representative Number Five Test Cycle was developed in the 1990's to better represent actual on-road driving by combining modern city and freeway driving.

Figure 4.8. New York City Driving Cycle

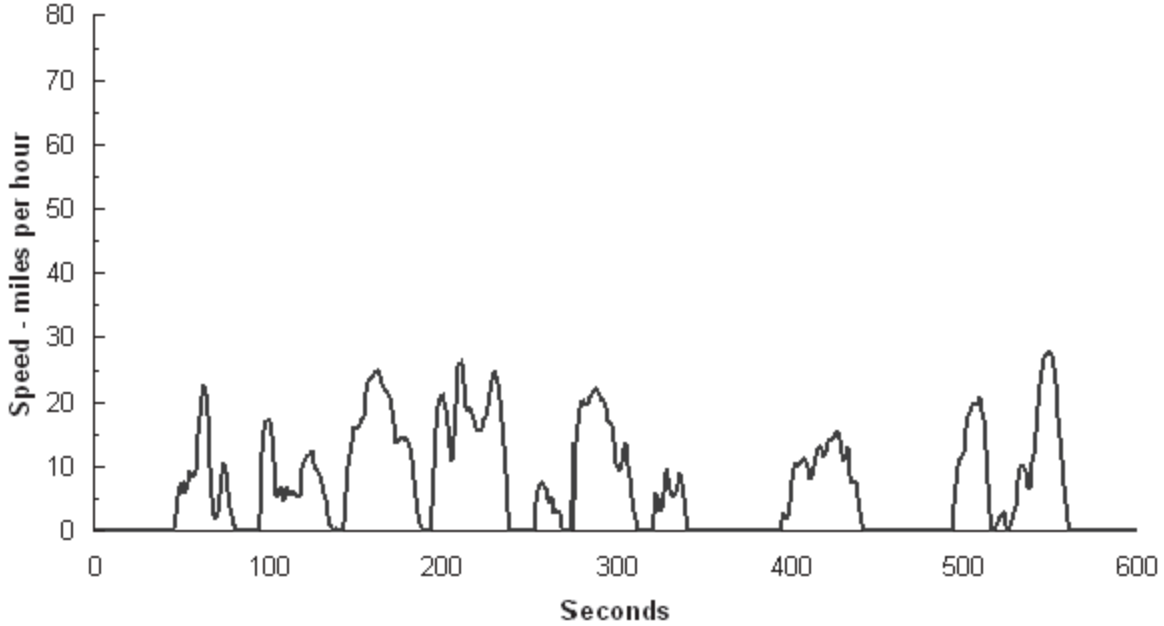

Figure 4.9. Representative Number Five Driving Cycle

Source:

Data obtained from Michael Wang, Argonne National Laboratory, Argonne, IL, 1997.

Testing cycles to determine vehicle fuel economy and emissions vary by country and therefore it is difficult to make a direct comparison. Statistics on the driving cycles from Europe, Japan and the U.S. are listed in below. In addition, Table 4.30 displays the cycle results of these countries by vehicle type. Note that the differences in these cycle results vary with each individual vehicle tested.

Table 4.29
Comparison of U.S., European, and Japanese Driving Cycles Attributes

	Time (seconds)	Average speed (mph)	Maximum speed (mph)	Maximum acceleration (mph/s)
Japanese JC08 test cycle	631	14.8	43.5	1.8
New European Driving Cycle (NEDC)	1,181	20.9	74.6	2.4
U.S. EPA city cycle (LA4) ^a	1,375	19.5	56.7	3.3
U.S. EPA highway cycle	766	48.2	59.9	3.3
U.S. Corporate Average Fuel Economy (CAFE) cycle	^a	32.4 ^b	59.9	3.3

Note: China uses the NEDC. India uses a modified version of the NEDC called The Modified Indian Driving Cycle which accounts for lower maximum speeds that better represent driving conditions in India.

Table 4.30
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles

Vehicle type	Miles per gallon			Percentage difference from	
	CAFE cycle	NEDC	JC08 cycle	CAFE to NEDC	CAFE to JC08
Small car	34.8	32.4	27.6	-7%	-21%
Large car	26.6	24.7	21.5	-7%	-19%
Minivan	23.9	20.5	17.2	-14%	-28%
Sport-utility vehicle	20.2	17.6	14.6	-13%	-28%
Pickup	18.8	15.9	13.5	-15%	-28%

Note: Simulation results for identical gasoline vehicles (i.e., results for the same small car on each of the three cycles).

Source:

The International Council on Clean Transportation, *Passenger Vehicle Greenhouse Gas and Fuel Economy Standards: A Global Update*, July 2009.

^a Data are not available.

^b The actual Federal Procedure (FTP), which is also the test for emissions certification, repeats the first 505 seconds of the Federal Urban Driving Simulation cycle, hot started, after a 10 minute hot soak. Starting with Model Year 2001, the emissions test-but not the fuel economy test-incorporates a supplemental cycle that simulates aggressive urban driving, coupled with an added air conditioning load.

Demand response vehicles (also called paratransit or dial-a-ride) are widely used by transit agencies. The vehicles do not operate over a fixed route or on a fixed schedule. The vehicle may be dispatched to pick up several passengers at different pick-up points before taking them to their respective destinations and may even be interrupted en route to these destinations to pick up other passengers. Demand response service is provided primarily by vans. In 2007, the data changed substantially due to improved estimation methodologies. Unfortunately, those data are no longer comparable to the rest of the historical series.

Table 4.31
Summary Statistics on Demand Response Vehicles, 1994–2012

Year	Number of agencies	Number of active vehicles	Vehicle-miles (millions)	Average miles per vehicle	Passenger-miles (millions)	Average load factor ^a	Energy use (trillion Btu)

Table 5.18	Transit buses in operation, 2012	70,757

Class 3-8 single-unit trucks include trucks over 10,000 lbs. gross vehicle weight with the cab/engine and cargo space together as one unit. Most of these trucks would be used for business or for individuals with heavy hauling or towing needs. Very heavy single-units, such as concrete mixers and dump trucks, are also in this category. The data series was recently changed by the FHWA back to 2007.

Table 5.1
Summary Statistics for Class 3-8 Single-Unit Trucks, 1970–2012

^a Due to FHWA methodology changes, data from 2007-on are not comparable with previous data.

Class 7-8 combination trucks include all trucks designed to be used in combination with one or more trailers with a gross vehicle weight rating over 26,000 lbs. The average vehicle travel of these trucks (on a per truck basis) far surpasses the travel of other trucks due to long-haul freight movement. The data series was recently changed by the FHWA back to 2007.

^a The Federal Highway Administration changed the combination truck travel methodology in 1993.

^b Due to FHWA methodology changes, data from 2007-on are not comparable with previous data.

Truck sales rose in 2010 for the first time since the sales peak in 2004 and have continued to rise since then. Trucks under 10,000 lbs. continue to dominate truck sales.

^a Sales include domestic-sponsored imports.

^b Data for 1970 is based on new truck registrations.

^c Data are not available.

^d 1987-2013.

The Census Bureau has discontinued the Vehicle Inventory and Use Survey; it was not conducted in 2007. The 2002 data remain the latest available.

Vehicle Inventory and Use Survey

The Vehicle Inventory and Use Survey (VIUS), which was formerly the Truck Inventory and Use Survey (TIUS), provides data on the physical and operational characteristics of the Nation's truck population. It is based on a probability sample of private and commercial trucks registered (or licensed) in each state. In 1997, the survey was changed to the Vehicle Inventory and Use Survey due to future possibilities of including additional vehicle types. The 2002 VIUS, however, only includes trucks. Copies of the 2002 VIUS report or CD may be obtained by contacting the U.S. Bureau of the Census, Transportation Characteristics Surveys Branch (301) 457-2797. Internet site: www.census.gov/svsd/www/tiusview.html

Since 1987, the survey has included minivans, vans, station wagons on truck chassis, and sport utility vehicles in addition to the bigger trucks. The 1977 and 1982 surveys did not include those vehicle types. The estimated number of trucks that were within the scope of the 2002 VIUS and registered in the United States as of July 1, 2002 was 85.2 million. These trucks were estimated to have been driven a total of 1,115 billion miles during 2002, an increase of 6.8% from 1997. The average annual miles traveled per truck was estimated at 13,100 miles.

In the 2002 VIUS, there are several ways to classify a truck by weight. The survey respondent was asked the average weight of the vehicle or vehicle-trailer combination when carrying a typical payload; the empty weight (truck minus cargo) of the vehicle as it was usually operated; and the maximum gross weight at which the vehicle or vehicle-trailer combination was operated. The Census Bureau also collected information on the Gross Vehicle Weight Class of the vehicles (decoded from the vehicle identification number) and the registered weight of the vehicles from the State registration files. Some of these weights are only provided in categories, while others are exact weights. Since all these weights could be quite different for a single truck, the tabulations by weight can be quite confusing. In the tables presented here, the Gross Vehicle Weight Class was used.

Table 5.4
Truck Statistics by Gross Vehicle Weight Class, 2002

Manufacturer's gross vehicle weight class	Number of trucks	Percentage of trucks	Average annual miles per truck	Harmonic mean fuel economy	Percentage of fuel use
1) 6,000 lbs and less	51,941,389	61.0%	11,882	17.6	42.7%

8) 33,001 lbs and over	5.5	5.7	5.7
Large truck subtotal	5.6	6.1	5.8

Note: Based on average fuel economy as reported by respondent.

Sources:

Estimates are based on data provided on the following public use files: U.S. Department of Commerce, Bureau of the Census, Census of Transportation, Washington, DC, *1992 Truck Inventory and Use Survey*, 1995; *1997 Vehicle Inventory and Use Survey*, 2000, and *2002 Vehicle Inventory and Use Survey*, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

As expected, most light trucks travel within 50 miles of their home base and refuel at public stations. About sixty percent of heavy trucks travel over 50 miles from their home base and 36% of them refuel at central company-owned refueling stations.

^a The respondent was asked to choose the category which best described the trips made by the vehicle.

^b Percentages may not sum to totals due to rounding.

More medium truck owners listed construction as the truck's major use than any other major use category. Construction was the second highest major use for light trucks and heavy trucks.

^a Percentages may not sum to totals due to rounding.

Most trucks are fueled at gas stations but for-hire or warehousing trucks are more often fueled at truck stops. Mining trucks and vehicle leasing or rental trucks fuel at the companies' own facility more than 30% of the time.

The figure below shows the distribution of annual travel the two types of Class 7 and 8 vehicles—combination units (separate tractor and trailer) and single units (tractor and trailer on a single chassis). This information is for all trucks and trucks two years old or less. Combination trucks, dominated by box-type trailers, display the greatest amount of annual travel of all heavy vehicle types, as is evidenced both by the range of annual use. Most of the single-unit trucks in the survey travel 40,000 miles per year or less.

Figure 5.1. Distribution of Trucks over 26,000 lbs. by Vehicle-Miles Traveled

Note: Heavy trucks (class 7 & 8) are greater than 26,000 pounds gross vehicle weight based on the manufacturer’s rating.

Source:

U.S. Department of Commerce, Bureau of the Census, 2002 Vehicle Inventory and Use Survey, Microdata File on CD, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

The latest Vehicle Inventory and Use Survey asked truck owners if the truck had certain features as permanent equipment on the truck. Some of the features asked about were onboard computers, idle-reduction devices, navigational systems, and Internet access. Of the 2.3 million heavy trucks (class 7 & 8) in the United States, nearly 10% were equipped with onboard computers that had communication capabilities and another 5% had onboard computers without communication capabilities. Six percent of heavy trucks were equipped with idle-reducing technology. Navigational systems and Internet access were available in less than one percent of heavy trucks.

Figure 5.2. Share of Heavy Trucks with Selected Electronic Features, 2002

Note: Heavy trucks (class 7 & 8) are greater than 26,000 pounds gross vehicle weight based on the manufacturer's rating.

Fuel Economy Study for Class 8 Trucks

As part of a long-term study sponsored by the U.S. Department of Energy (DOE) Office of Vehicle Technologies (OVT), the Oak Ridge National Laboratory (ORNL) in conjunction with several industry partners has collected data and information related to heavy-truck operation in real-world highway environments. The primary objective of the project was to collect real-world performance and spatial data for long-haul operations of Class 8 tractor-trailers from a fleet engaged in normal freight operations. Six model year 2005 Class 8 trucks from the selected fleet, which operates within a large area of the country extending from the east coast to Mountain Time Zone and from Canada to the US-Mexican border, were instrumented and 60 channels of data were collected for over a year at a rate of 5 Hz (or 5 readings per second). Those channels included information such as instantaneous fuel rate, engine speed, gear ratio, vehicle speed, and other information read from the vehicle's databus; weather information (wind speed, precipitation, air temperature, etc.) gathered from an on-board weather station; spatial information (latitude, longitude, altitude) acquired from a GPS (Global Positioning System) device; and instantaneous tractor and trailer weight obtained from devices mounted on the six participating tractors and ten trailers. Three of the six instrumented tractors and five of the ten instrumented trailers were mounted with New Generation Single Wide-Based Tires and the others with regular dual tires. Over the duration of this phase of the project (just over a year) the six tractors traveled nearly 700,000 miles.

To find out more about this project, contact Oscar Franzese, franzeseo@ornl.gov, 865-946-1304. The final report on this project is available on-line at: cta.ornl.gov/cta/Publications/Reports/ORNL_TM_2008-122.pdf.

The type of terrain a truck is traveling on can cause significant differences in fuel efficiency. This study (see page 5-13 for project description) shows fuel economy on severe upslopes is less than half that on flat terrain. On severe downslopes, the fuel economy was two times higher than on flat terrain.

Table 5.10
Effect of Terrain on Class 8 Truck Fuel Economy

Type of terrain	Share of data records	Average fuel efficiency (mpg)			
		All trucks	Tractors with dual tires	Tractors with single (wide) tires	Difference between dual and single tires (percent)
Severe upslope (>4%)	0.7%	2.90	2.86	2.94	2.91%
Mild upslope (1% to 4%)	13.2%	4.35	4.25	4.44	4.35%
Flat terrain (1% to 1%)	72.4%	7.33	7.08	7.58	7.13%
Mild downslope (-4% to -1%)	12.6%	15.11	14.64	15.57	6.36%
Severe downslope (<-4%)	1.1%	23.5	21.82	25.3	15.97%

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008. (Additional resources: cta.ornl.gov/cta/Publications/Reports/ORNL_TM_2008-122.pdf)

This table presents a distribution of distance traveled, fuel consumed, and fuel economy by speed and by type of tires for the vehicles participating in the project (see page 5-13 for project description). The speed bins are divided into 5-mile intervals, going from 0+ mph (i.e., speed > 0.00 mph) to 85 mph, while the four main columns of the table are organized by the type of tires that were mounted on the tractor and trailers. The first row of the table contains information about fuel consumed while the vehicle was idling (i.e., the vehicle was static with the engine on) with the following rows presenting information about the distance traveled, fuel consumed, and fuel economy for each one of the speed intervals. The next-to-the-last row shows the totals for both traveled distances and fuel consumed as well as the overall fuel economy for each tire-combination category. The latter are then used to compute the percentage difference in terms of fuel economy from dual tire tractors and trailers, which is the most common tire setup for large trucks at the present time.

Table 5.11
Fuel Economy for Class 8 Trucks as Function of Speed
and Tractor-Trailer Tire Combination

Speed (mph)	Dual tire tractor – dual tire trailer			Dual tire tractor – single (wide) tire trailer			Single (wide) tire tractor – dual tire trailer			Single (wide) tire tractor – single (wide) tire trailer

60+ to 65	38,964	5,879.6	6.63	21,472	2,980.8	7.20	34,517.0	4,840.0	7.1	14,944	2,049.4	7.29
NOT ADJUSTED FOR TERRAIN: See note below.												
65+ to 70	58,304	8,313.2	7.01	27,931	3,652.2	7.65	65,063.0	9,256.4	7.0	27,144	3,880.1	7.00
70+ to 75	56,378	7,483.2	7.53	21,751	2,745.5	7.92	66,882.0	8,435.6	7.9	32,887	4,056.1	8.11
75+ to 85	7,849	808.2	9.71	3,610	403.2	8.95	11,513.0	911.1	12.6	6,817	512.2	13.31
Total ^a	207,374	30,831.0	6.73	99,714	13,994.0	7.13	228,680.0	31,913.0	7.2	101,790	13,858.0	7.35
Percent increase in fuel economy from dual tire trac/trailer	0.00%			5.93%			6.53%			9.20%		

Note: These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

Source:

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008. (Additional resources: cta.ornl.gov/cta/Publications/Reports/ORNL_TM_2008-122.pdf)

^a Total fuel consumed does not include fuel consumed while idling.

The fuel economy information presented in Table 5.11 is on the upper limits of today's large-truck fleets and is mostly a result of driver training and the extensive vehicle maintenance (including constant tire pressure) to which the fleet company participating in this project adheres. Nevertheless, the results of this extensive test indicate that there are substantial gains in terms of fuel economy for large trucks when single (wide) tires are used in combination with dual tires or alone (best case). Figure 5.3 shows the information from Table 5.11 in a graphical form (bars) and also displays for each speed bin the percentage of the total distance that is traveled at that speed (line). It is possible to observe that above 80% of the distance traveled by long-haul Class 8 trucks is done at speeds above 55 mph. Therefore, any gains in fuel economies at these speeds derived from a given tire combination would have a very large impact on the overall fuel economy of these types of trucks. Figure 5.3 shows that, except for the D-S combination within the 65+ to 70 mph, the combinations with all single (wide) tires perform better and, therefore, obtain the largest overall fuel economy.

Figure 5.3. Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed

NOT ADJUSTED FOR TERRAIN: See note below.

Note: D = Dual tire. S = Single (wide) tire.

These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

A typical class 8 truck tractor weighs about 17,000 lbs. The powertrain is nearly a quarter of the weight (24%) while the truck body structure is 19%.

Table 5.12
Class 8 Truck Weight by Component

	Pounds	Share of total
Wheels and tires	1,700	10%
Chassis/frame	2,040	12%
Drivetrain and suspension	2,890	17%
Misc. accessories/systems	3,060	18%
Truck body structure	3,230	19%
Powertrain	4,080	24%
Total	17,000	100%

Notes:

- Powertrain includes engine and cooling system, transmission and accessories.
- Truck body structure includes cab-in-white, sleeper unit, hood and fairings, interior and glass.
- Miscellaneous accessories/systems include batteries, fuel system, and exhaust hardware.
- Drivetrain and suspension includes drive axles, steer axle, and suspension system.
- Chassis/frame includes frame rails and crossmembers, fifth wheel and brackets. Wheels and tires include a set of 10 aluminum wheels, plus tires.

National Academy of Sciences, *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles*, prepublication copy, March 2010, p. 5-42.

The gross weight of a vehicle (GVW) is the weight of the empty vehicle plus the weight of the maximum payload that the vehicle was designed to carry. In cars and small light trucks, the difference between the empty weight of the vehicle and the GVW is not significantly different (1,000 to 1,500 lbs). The largest trucks and tractor-trailers, however, have a payload capacity share of 200%, which means they can carry 200% of their empty weight. The medium-sized trucks (truck classes 3-6) have payload capacity shares between 50% and 100%.

Table 5.13
Gross Vehicle Weight vs. Empty Vehicle Weight

Vehicle description	Truck class	Gross vehicle weight range (pounds)	Empty vehicle weight range (pounds)	Maximum payload capacity (pounds)	Payload capacity share (percent of empty weight)
Cars		3,200-6,000	2,400-5,000	1,000	20%
Minivans, small SUVs, small pick-ups	1	4,000-2,400	3,200-4,500	1,500	33%
Large SUVs, standard pick-ups	2a	6,001-8,500	4,500-6,000	2,500	40%
Large SUVs, standard pick-ups	2b	8,501-10,000	5,000-6,300	3,700	60%
Utility van, multi-purpose, mini-bus, step van	3	10,001-14,000	7,650-8,750	5,250	60%
City delivery, parcel delivery, large walk-in, bucket, landscaping	4	14,001-16,000	7,650-8,750	7,250	80%
City delivery, parcel delivery, large walk-in, bucket	5	16,001-19,500	9,500-10,000	8,700	80%
City delivery, school bus, large walk-in, bucket	6	19,501-26,000	11,500-14,500	11,500	80%
City bus, furniture, refrigerated, refuse, fuel tanker, dump, tow, concrete, fire engine, tractor-trailer	7	26,001-33,000	11,500-14,500	18,500	125%
Refuse, concrete, furniture, city bus, tow, fire engine (straight trucks)	8a	33,001-80,000	20,000-26,000	54,000	200%
Tractor-trailer: van, refrigerated, bulk tanker, flat bed (combination trucks)	8b	33,001-80,000	20,000-26,000	54,000	200%

Source:

National Academy of Sciences, *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles*, prepublication copy, March 2010, pp. 2-2 and 5-42.

According to weigh-in-motion data collected by fifteen states, the majority of 5-axle tractor-trailers on the road weigh between 33,000 and 73,000 lbs. Eleven percent of the tractor-trailers had weight recorded around 72,800 lbs and 10% around 68,300 lbs. Another 10% of tractor-trailers were on the lighter end of the scale – around 37,500 lbs. These data show that only a small percent of trucks on the road are near the maximum roadway gross vehicle weight of 80,000 lbs. Thus, most trucks are filling the trailer space to capacity (cubing-out) before they reach the maximum weight limit (weighing-out).

Figure 5.5. Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008^a

Note: Data are from these 15 States: California, Connecticut, Florida, Georgia, Hawaii, Iowa, Minnesota, Missouri, Montana, North Carolina, Oregon, Pennsylvania, South Dakota, Texas, and Washington.

^a Study reported data on 5-axle tractor-trailers which are class 8 trucks. Single-unit class 8 trucks were not considered in the study.

Commodity Flow Survey

The Commodity Flow Survey (CFS) is designed to provide data on the flow of goods and materials by mode of transport. The 1993, 1997, 2002, 2007 and 2012 CFS are a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and include major improvements in methodology, sample size, and scope. The 2012 CFS covers business establishments with paid employees that are located in the United States and are classified using the North American Industry Classification System (NAICS) in mining, manufacturing, wholesale trade, and select retail and services establishments. Establishments classified in services, transportation, construction, and most retail and services industries are excluded from the survey. Farms, fisheries, foreign establishments, and most government-owned establishments are also excluded.

The 1993, 1997, 2002, 2007 and 2012 CFS differ from previous surveys in their greatly expanded coverage of intermodalism (i.e., shipments which travel by at least two different modes, such as rail and truck). Earlier surveys reported only the principal mode.

The data can be viewed at: www.bts.gov/publications/commodity_flow_survey.

Industries covered by the 2012 Commodity Flow Survey (CFS) shipped over 11 billion tons of goods worth over \$13 trillion. Compared to the 1997 CFS, the value of shipments is up 2.1% per year and tons shipped are up 0.4% per year. By value, intermodal shipments increased 2.1% per year from 1997 to 2012.

Table 5.14
Value of Goods Shipped in the United States: Comparison of the 1997, 2002, 2007 and 2012 Commodity Flow Surveys^a

Industries covered by the 2012 Commodity Flow Survey (CFS) accounted for 3.3 trillion ton-miles on the nation's highways, railways, waterways, pipelines, and aviation system. Ton-miles increased an average of 1.5% per year from 1997 to 2012.

Chapter 6

Alternative Fuel and Advanced Technology Vehicles and Characteristics

Summary Statistics from Tables in this Chapter

Source		
Table 6.1	Alternative fuel vehicles in use, 2011 (latest available)	1,191,786
	<i>E85</i>	862,837
	<i>LPG</i>	139,477
	<i>CNG</i>	118,214
	<i>Electric</i>	67,295
	<i>LNG</i>	3,436
	<i>M85</i>	0
Table 6.8	Number of alternative fuel refuel sites, 2014	40,578
	<i>Electric outlets</i>	22,747
	<i>LPG</i>	2,987
	<i>CNG</i>	1,375
	<i>Biodiesel</i>	817
	<i>Hydrogen</i>	56

Fuel type abbreviations are used throughout this chapter.

B20 = 20% biodiesel, 80% petroleum diesel

CNG = compressed natural gas

E85 = 85% ethanol, 15% gasoline

E95 = 95% ethanol, 5% gasoline

H₂ = hydrogen

LNG = liquefied natural gas

LPG = liquefied petroleum gas

M85 = 85% methanol, 15% gasoline

M100 = 100% methanol

Alternative Fuels

The Energy Policy Act of 1992 defines alternative fuels and allows the U.S. Department of Energy (DOE) to add to the list of alternative fuels if the fuel is substantially nonpetroleum, yields substantial energy security benefits, and offers substantial environmental benefits. DOE currently recognizes the following as alternative fuels:

- methanol, ethanol, and other alcohols,
- blends of 85% or more of alcohol with gasoline,
- natural gas and liquid fuels domestically produced from natural gas,
- liquefied petroleum gas (propane),
- coal-derived liquid fuels,
- hydrogen,
- electricity,
- biodiesel (BIOO),
- fuels (other than alcohol) derived from biological materials,
- P-series.

Alternative Fuels Data Center

DOE established the Alternative Fuels Data Center (AFDC) in 1991 to support its work aimed at fulfilling the Alternative Motor Fuels Act directives. Since then, the AFDC has expanded its focus to include all advanced transportation fuels, vehicles, and technologies. The AFDC is operated and managed by the National Renewable Energy Laboratory (NREL) in Golden, Colorado.

The purposes of the AFDC are:

- to gather and analyze information on the fuel consumption, emissions, operation, and durability of alternative fuel vehicles, and
- to provide unbiased, accurate information on alternative fuels and alternative fuel vehicles to government agencies, private industry, research institutions, and other interested organizations.

Much of the AFDC data can be obtained through their website: **www.afdc.energy.gov**. Several tables and graphs in this chapter contain statistics which were generated by the AFDC. Below are some links to specific areas of the AFDC website.

Alternative & Advanced Fuels – www.afdc.energy.gov

Alternative Fueling Station Locator – www.afdc.energy.gov/afdc/locator/stations/

Alternative & Advanced Vehicles – www.afdc.energy.gov/fuels

State & Federal Incentives & Laws – www.afdc.energy.gov/afdc/laws/

Data Analysis & Trends – www.afdc.energy.gov/data/

Tools – www.afdc.energy.gov/tools

There are almost 1.2 million alternative fuel vehicles in the United States, not including flex-fuel E85 vehicles which operate mainly on gasoline. The E85 vehicles in this table are those believed to be regularly fueled with E85 and represent only fleet vehicles covered under the Energy Policy Act.

Note: These are the latest available data from the Energy Information Administration.

Source:

U. S. Department of Energy, Energy Information Administration, *Alternative Fuel Vehicle Data*, Washington, DC, May 2013, website: www.eia.gov/renewable/afv/. 1995-2006, *Annual Energy Review*, Table 10.4. Estimated Number of Alternative-Fueled Vehicles in Use and Replacement Fuel Consumption.

^a Vehicles in Use represent accumulated acquisitions, less retirements, as of the end of each calendar year. They do not include concept and demonstration vehicles.

^b Includes only those E85 vehicles believed to be used as alternative-fuels vehicles (AFVs), primarily fleet-operated vehicles; excludes other vehicles with E85-fueling capability. In 1997, some vehicle manufacturers began including E85-fueling capability in certain model lines of vehicles. For 2007, the Energy Information Administration (EIA) estimates that the number of E85 vehicles that are capable of operating on E85, motor gasoline, or both, is about 7.1 million. Many of these AFVs are sold and used as traditional gasoline-powered vehicles.

^c Excludes HEVs.

Trolleybus, heavy rail, and light rail use nearly all alternative fuels. However, the 40.4% of buses using alternative fuels replace a lot of traditional fuel use. Ferry boats have the highest average age.

Table 6.2
Alternative Fuel Transit Vehicles, 2013

Mode	Average age	Percent powered by alternative fuels	Number of vehicles
Bus	7.8	40.4%	70,187
Commuter rail	19.2	16.6%	7,059
Ferry boat	21.7	52.6%	186
Heavy rail	20.5	100.0%	10,469
Light rail	17.8	98.4%	1,986
Paratransit	4.2	8.3%	68,632
Trolleybus	11.4	100.0%	570
Vanpool	^a	^a	14,018

Note: See Glossary for definition of modes, such as paratransit and vanpool. The number of vehicles is a 2012 estimate.

^a Totals by State is the total number of fuel types available at stations. Stations are counted once for each type of fuel available.

In 2012, the United States and Russia were by far the top natural gas producing countries with more than double that of any other country. Although the United States produced more than Russia, Russia has five times more reserves.

Alternative Fuels Data Center, "Properties of Fuel," www.eere.energy.gov/afdc/pdfs/fueltable.pdf, July 2014.

^a Standard Chemical Formulas represent idealized fuels. Some table values are expressed in ranges to represent typical fuel variations that are encountered in the field.

^b GGE table values above reflect BTU range for common gasoline baseline references (E0, E10, and indolene certification fuel).

^c 1 gallon of E85 has 73% to 83% of the energy of one gallon gasoline (variation due to ethanol content in E85)

Table 6.10
Properties of Conventional and Alternative Gaseous Fuels

Property	Gaseous Fuels		
	Propane (LPG)	CNG	Hydrogen
Standard chemical formula ^a	C ₃ H ₈	CH ₄	H ₂
Physical state	Compressed gas	Compressed gas	Compressed gas or liquid
Molecular weight	44.1	16.04	2.02
Composition (weight %)			
Carbon	82	75	0
Hydrogen	18	25	100
Oxygen	n/a	n/a	0
Main fuel source(s)	Underground reserves	Underground reserves and renewable Bio-gas	Natural gas, methanol, electrolysis, and other energy sources
Gasoline gallon equivalent (GGE) ^b (Fuel unit measured/GGE)	1.34-1.38 (LPG gal/GGE)	5.56-5.71 (lb. mass/GGE) ^c	0.991-1.017 (kg mass/GGE)
Diesel gallon equivalent (DGE) (Fuel unit measured/DGE)	1.54 (LPG gal/DGE)	6.38 (lb. mass/DGE)	n/a
Specific Gravity (60° F/60°F)	1.55	0.60	0.069
Density (lb./cu ft @ 60°F)	0.124	0.0458	0.0056
Freezing point (°F)	-305.8	-296	-435
Boiling Point (°F)	-44	-260	-423
Autoignition temperature (F°)	842	900-1,170	932
Reid vapor pressure (psi)	208	n/a	n/a

	<i>Light trucks (<8,500 lbs. GVW)</i>	282,319
	<i>Cars and other passenger vehicles</i>	245,800
	<i>Medium trucks (8,500–26,000 lbs. GVW)</i>	78,630
	<i>Heavy trucks (>26,000 lbs. GVW)</i>	33,642
	<i>Buses and ambulances</i>	9,670

Vehicles in fleets of 15 or more are counted as fleet vehicles, as well as vehicles in fleets where five or more vehicles are purchased annually. Historical data on fleets are not available due to definitional changes of what constitutes a fleet.

Figure 7.1. Fleet Vehicles in Service as of January 1, 2013

^a Taxi category includes vans.

^b Rental category includes vans and sports utility vehicles under cars, not trucks.

^c Fleets of 15 or more in operation or 5 or more fleet vehicles purchased annually.

Rental companies had the largest light fleet vehicle registrations in 2012 with over 1.8 million new vehicles, most of them cars (60.3%). Only 27.8% of the new commercial fleet registrations were cars.

Table 7.1
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012

	Commercial	Rental	Government	Total
Cars	27.8%	60.3%	33.9%	51.1%
Pickup trucks	33.3%	5.5%	30.2%	13.5%
Vans	19.3%	10.9%	15.9%	13.2%
Sport utility vehicles	19.6%	23.3%	20.1%	22.2%
Total	597,492	1,812,036	158,309	2,567,837

^a Public assistance monies are included in reported income. Data for those reporting income.

^b Percentages may not sum to totals due to rounding.

^c Includes alcoholic beverages.

^d Includes personal care, reading, education, tobacco and smoking supplies, cash contributions, and miscellaneous items.

^e The term household refers to a “consumer unit,” which is defined differently than households on Table 8.1.

The average amount of money that a household spends in a year has changed very little between 1985 and 2012 in constant dollar terms. Expenditures on transportation were 19.4% of the total in 1985, but were 17.5% in 2012. Vehicle purchases made up more than one-third of transportation expenditures in 2012, while gas and oil were 31%.

Table 8.4
Annual Household Expenditures for Transportation, 1985-2012
(constant 2012 dollars)

Year	Transportation expenditures					Average annual household expenditures	Transportation share of annual expenditures

^a Other vehicle expenses include vehicle finance charges, maintenance and repairs, insurance, licenses, and other vehicle charges.

Household vehicle ownership shows a dramatic increase from 1960 to 1990. In 1960, nearly 79% of households owned less than two vehicles; by 1990, it declined to 45%. Census data prior to 1990 indicated that the majority of households owned one vehicle; in 1990 that changed to two vehicles. Since 2000, less than 10% of households had no vehicles. The American Community Survey now collects these data on an annual basis, thus 2011 and 2012 data are available.

Table 8.5
Household Vehicle Ownership, 1960–2012 Census
(percentage)

	No vehicles	One vehicle	Two vehicles	Three or more vehicles
1960	21.5%	56.9%	19.0%	2.5%
1970	17.5%	47.7%	29.3%	5.5%

2010-2012 data – U.S. Bureau of the Census, American Community Survey, Table CP04, 2012.

2009 National Household Travel Survey Daily Trip Data

The Department of Transportation (DOT) collected data on daily trips in 1969, 1977, 1983, 1990 and 1995 via the Nationwide Personal Transportation Survey (NPTS). For 2001, the DOT combined the collection of long trip and daily trip data into one survey – the 2001 National Household Travel Survey (NHTS). The long trip data were not included in the 2009 NHTS.

The NHTS is the nation’s inventory of daily travel. The survey includes demographic characteristics of households, people, vehicles, and detailed information on daily travel for all purposes by all modes. NHTS survey data are collected from a sample of U.S. households and expanded to provide national estimates of trips and miles by travel mode, trip purpose, and a host of household attributes.

The NHTS was designed to continue the NPTS series, but as with all data surveys, caution should be used when comparing statistics from one survey to another due to changes in terminology, survey procedures, and target population. The 2001 and 2009 surveys collected data on trips of children under 5 years of age, while the previous NPTS did not. Improved methodologies first used in the collection of trip information in the 1995 NPTS make it difficult to compare these data with past NPTS survey data. Thus, the 1990 NPTS trip data have been adjusted to make it comparable with the later surveys.

The next NHTS will be conducted in 2015.

Table 8.6
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS

	1969	1977	1983	1990	1995	2001	2009	Percent change 1969–2009
Persons per household	3.16	2.83	2.69	2.56	2.63	2.58	2.50	-21%
Vehicles per household	1.16	1.59	1.68	1.77	1.78	1.89	1.87	61%
Workers per household	1.21	1.23	1.21	1.27	1.33	1.35	1.34	11%
Licensed drivers per household	1.65	1.69	1.72	1.75	1.78	1.77	1.88	14%
Vehicles per worker	0.96	1.29	1.39	1.40	1.34	1.39	1.40	46%
Vehicles per licensed driver	0.70	0.94	0.98	1.01	1.00	1.06	1.00	42%
Average vehicle trip length (miles)	8.89	8.34	7.90	8.98	9.06	9.87	9.72	9%

Note: Average vehicle trip length for 1990 and 1995 is calculated using only those records with trip mileage information present. The 1969 survey does not include pickups and other light trucks as household vehicles. Data on vehicles per household and licensed drivers per household will not match Table 8.2.

Sources:

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92-027, Washington, DC, March 1992, Table 2. Data for 1995, 2001 and 2009 were generated from the website nhts.ornl.gov. (Additional resources: www.fhwa.dot.gov)

Due to methodology improvements in collecting trip information, the 2001 and 1995 data should be compared only to the 1990 adjusted data. The original 1990 data are comparable to all previous surveys; however, comparisons should always be made with caution because of differing survey methodologies.

Table 8.7
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household
1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92-027, Washington, DC, March 1992, Table 7. 1990 adjusted data – Oak Ridge National Laboratory, Oak Ridge, TN, August 1998. 1995 NPTS, 2001, 2009 NHTS data were generated from the website nhts.ornl.gov. (Additional resources: www.fhwa.dot.gov, nhts.ornl.gov)

^a It is believed that the methodology changes in the 1995 NPTS did not affect journey-to-work trips; therefore, no adjustment is necessary.

In 2001 and 2009 vehicle-miles traveled (vmt) for a three-person household is around 28,000 miles. The number of drivers in a household makes a big difference in vmt, as does the presence of children in the household. Households with children have more than double the vmt of households without children.

While car occupancy stayed nearly constant from 1995 to 2009, most other vehicle types showed increased occupancy. Vans and sport utility vehicles have higher vehicle occupancies than cars.

Figure 8.1. Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS

U.S. Department of Transportation, Federal Highway Administration, 1995 Nationwide Personal Transportation Survey, Washington, DC, 1997, and 2009 National Household Travel Survey, Washington, DC. (Additional resources: www.fhwa.dot.gov, website: nhts.ornl.gov)

The average vehicle occupancy, calculated as person-miles per vehicle-mile, is highest for social and recreational purposes. The highest vehicle occupancy levels for all purposes were in 1977. The increase in number of vehicles per household and the decrease in average household size could have contributed to the decline since then.

**Figure 8.2. Average Vehicle Occupancy by Trip Purpose

Data from 2009 NHTS were generated from the website nhts.ornl.gov, March 2011. (Additional resources: www.fhwa.dot.gov, nhts.ornl.gov)

The 1990 household survey reports the highest average annual miles per vehicle and the 1983 survey reports the lowest. These data show that younger vehicles are typically driven more miles than older vehicles.

Table 8.10
Average Annual Miles per Household Vehicle by Vehicle Age

Vehicle age (years)	1983 self-reported	1990 self-reported	1995 self-reported	2001 self-reported	2009 self-reported
Under 1	8,200	19,600	15,900	15,500	13,200
1	15,200	16,800	16,800	14,300	14,600
2	16,800	16,600	15,500	14,000	13,900

Nationwide Personal Transportation Study—1983: D. Klinger and J. Richard Kuzmyak, COMSIS Corporation, *Personal Travel in the United States, Volume 1: 1983–84 Nationwide Personal Travel Study*, prepared for the U.S. Department of Transportation, Washington, DC, August 1986, Table 4-22, p. 4-21. 1990: Generated from the 1990 Nationwide Personal Transportation Study Public Use Tape, March 1992. 1995, 2001 and 2009: Generated from the 2009 NHTS datasets, version 2, February 2011. (Additional resources: nhts.ornl.gov)

Historically, the data from the Nationwide Personal Transportation Survey (NPTS) are based on estimates reported by survey respondents. For the 1995 NPTS and the 2001 National Household Travel Survey (NHTS), odometer data were also collected. The 1995 data indicate that respondents overestimate the number of miles they drive in a year, but the 2001 data do not show that same trend.

Table 8.11
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS

Vehicle age (years)	1995 self-reported	1995 odometer	2001 self-reported	2001 odometer
Under 1	15,900	15,600	15,500	14,500
1	16,800	14,500	14,300	14,200
2	15,500	14,800	14,000	13,700
3	14,400	13,800	13,100	14,100
4	14,100	12,900	12,500	13,400
5	13,500	12,700	12,000	12,900
6	13,200	12,400	11,800	12,400
7	12,800	11,600	11,600	12,100
8	12,200	11,300	10,900	11,300
9	12,200	11,200	10,800	10,500
10 and older	8,900	9,000	7,400	8,100
All household vehicles	12,200	11,800	11,000	11,800

Note: The 2009 NHTS did not collect similar data. Survey methodology on odometer reading data differs from 1995 to 2001 data.

According to the U.S. Census data, the percentage of workers who car pooled has dropped from 19.7% in 1980 to 10.0% in 2012. The percent of workers using public transit declined from 6.4% to 5.3% in the ten-year period between 1980 and 1990, but stayed relatively the same from 1990 to 2012 (~5.0%). The average travel time increased by 3.7 minutes from 1980 to 2012. The American Community Survey (ACS) now collects journey-to-work data on an annual basis. It shows the average commute time as 25.4 minutes in 2012.

Sales of bicycles with wheel sizes of 20 inches and over have grown at an average annual rate of 1.2% from 1981 to 2012. Bicycle sales experienced a large decline in 2009, which brought total sales to 14.9 million—a new low in the 18-year series. Sales in 2012 were 18.7million.

^a Data are not available.

In 2009, 4.5% of walk trips and 10.9% of bike trips were to/from work. Forty-seven percent of all bike trips were for social/recreational purposes. Nearly 15% of walk trips were shopping trips.

U.S. Department of Transportation, Federal Highway Administration, 2009 National Household Travel Survey website: nhts.ornl.gov.

In 2009 only data on daily trips were collected in the NHTS. The 2001 data are still the latest available on long-distance trips.

Long Distance Trips – 2001 National Household Travel Survey

The 2001 National Household Travel Survey (NHTS) collected data on long-distance trips as well as everyday travel. The everyday travel data is a continuation of the Nationwide Personal Transportation Survey (NPTS), while the long-distance travel data is a continuation of the American Travel Survey (ATS) which was collected in 1977 and 1985. The survey collected trip-related data such as mode of transportation, duration, distance and purpose of trip. It also gathered demographic, geographic, and economic data for analysis purposes.

A long-distance trip is defined as a trip of 50 miles or more, one-way. Long-trip data from the 2001 NHTS were released in the summer of 2004. For additional information about the 2001 NHTS data, contact the Bureau of Transportation Statistics at 202-366-3282 or visit the following website: www.bts.gov/programs/national_household_travel_survey.

1970–76 Energy Use – Department of Transportation, Civil Aeronautics Board, *Fuel Cost and Consumption*, Washington, DC, 1981, and annual.

^a Data are for all U.S. air carriers reporting on Form 41.

^b Available seats per aircraft is calculated as the ratio of available seat-miles to revenue aircraft-miles.

^c Passenger load factor is calculated as the ratio of revenue passenger-miles to available seat-miles for scheduled and nonscheduled services.

^d Energy use includes fuel purchased abroad for international flights.

General aviation includes: (1) aircraft operating under general operating and flight rules; (2) not-for-hire airplanes with a seating capacity of 20 or more or a maximum payload capacity of 6,000 lbs. or more; (3) rotorcraft external load operations; (4) on-demand and commuter operations not covered under Federal Aviation Regulations Part 121; and (5) agricultural aircraft operations.

^a Active fixed-wing general aviation aircraft only.

^b Includes rotorcraft.

In the early seventies, domestic waterborne commerce accounted for over 60% of total tonnage, but by 1994 foreign tonnage grew to more than half of all waterborne tonnage. Total foreign and domestic tons shipped were about 2.31 billion tons in 2012, down from a peak of 2.59 billion tons in 2006.

U.S. Department of the Army, Corps of Engineers, *The U.S. Waterway System, Transportation Facts and Information*, November 2013. (Additional resources: www.navigatordatacenter.us/index.htm)

^a All movements between the United States and foreign countries and between Puerto Rico and the Virgin Islands and foreign countries are classified as foreign trade.

^b All movements between U.S. ports, continental and noncontiguous, and on the inland rivers, canals, and connecting channels of the United States, Puerto Rico, and the Virgin Islands, excluding the Panama Canal. Beginning in 1996, fish was excluded for internal and intra port domestic traffic.

The U.S. Army Corps of Engineers Navigation Data Center collects a wealth of waterborne commerce data. Energy use data, however, have never been collected as part of this effort. The energy use data collected by the Energy Information Administration (EIA) on vessel bunkering was formerly displayed on this table. The EIA data include different uses of fuel, not just fuel for domestic waterborne commerce; therefore it was misleading to display those data together.

U.S. Environmental Protection Agency, NONROAD2008a model, downloadable file from www.epa.gov/otaq/nonrdmdl.htm.

The Interstate Commerce Commission designates Class I railroads on the basis of annual gross revenues. In 2012, seven railroads were given this designation. The number of railroads designated as Class I has changed considerably in the last 30 years; in 1976 there were 52 railroads given Class I designation.

Table 9.7
Class I Railroad Freight Systems in the United States
Ranked by Revenue Ton-Miles, 2012

Railroad	Revenue ton-miles (billions)	Percent
Burlington Northern and Santa Fe Railway Company	658	38.4%
Union Pacific Railroad Company	521	30.4%
CSX Transportation	226	13.2%
Norfolk Southern Railway	186	10.9%
Canadian National, Grand Trunk Corporation	56	3.3%
Canadian Pacific Soo Railway	37	2.2%
Kansas City Southern Railway Company	30	1.8%
Total	1,714	100.0%

Source:

Association of American Railroads, *Railroad Facts, 2013 Edition*, Washington, DC, December 2013, p. 66.
 (Additional resources: www.aar.org)

Revenue ton-miles for Class I freight railroads was over 1.7 trillion in 2012. Though there are many regional and local freight railroads, the Class I freight railroads accounted for 94% of the railroad industry's freight revenue in 2012 and 69% of the industry's mileage operated. The energy intensity of Class I railroads hit an all-time low of 289 btu/ton-mile in 2010 and continued to be below 300 btu/ton-mile in 2012.

^a Does not include self-powered units.

^b Does not include private or shipper-owned cars. Beginning in 2001, Canadian-owned U.S. railroads are excluded.

^c Tons originated is a more accurate representation of total tonnage than revenue tons. Revenue tons often produces double-counting of loads switched between rail companies.

^d Data represent total locomotives used in freight and passenger service. Separate estimates are not available.

According to the 2012 Commodity Flow Survey, 7% of all freight ton-miles are rail intermodal shipments (truck/rail or rail/water). See Table 5.16 for details. The number of trailers and containers moved by railroads has increased more than seven-fold from 1965 to 2012. Containerization has increased in the last two decades, evidenced by the 367% increase in the number of containers from 1988 to 2012. The number of trailers moved by rail, however, fell to an all-time low in 2009, but has continued to increase since that time.

^a Data are not available.

^b Energy use for 1994 on is not directly comparable to earlier years. Some commuter rail energy use may have been inadvertently included in earlier years.

Commuter rail, which is also known as regional rail or suburban rail, is long-haul rail passenger service operating between metropolitan and suburban areas, whether within or across state lines. Commuter rail lines usually have reduced fares for multiple rides and commutation tickets for regular, recurring riders.

Table 9.11
Summary Statistics for Commuter Rail Operations, 1984–2012

American Public Transportation Association, *2014 Public Transportation Fact Book*, Washington, DC, May 2014, Appendix A. (Additional resources: www.apta.com)

This table on transit rail operations includes data on light rail and heavy rail systems. Light rail vehicles are usually single vehicles driven electrically with power drawn from overhead wires. Heavy rail is characterized by high speed and rapid acceleration of rail cars operating on a separate right-of-way.

Table 9.12

Energy use – See Appendix A for Rail Transit Energy Use.

^a Heavy rail and light rail. Series not continuous between 1983 and 1984 because of a change in data source by the American Public Transit Association (APTA). Beginning in 1984, data provided by APTA are taken from mandatory reports filed with the Urban Mass Transit Administration (UMTA). Data for prior years were provided on a voluntary basis by APTA members and expanded statistically.

^b 1970–79 data represents total passenger rides; after 1979, data represents unlinked passenger trips.

^c Estimated for years 1970–76 based on an average trip length of 5.8 miles.

^d Calculated as the ratio of passenger-miles to passenger trips.

^e Large system-to-system variations exist within this category.

^f Data are not available.

^g Average annual percentage change is calculated for years 1980–2012.

The Transportation Services Index (TSI) was created by the U.S. Department of Transportation Bureau of Transportation Statistics (BTS). It is an index that measures the movement of freight and passengers. The Freight TSI consists of:

- for-hire trucking (parcel services are not included);
- freight railroad services (including rail-based intermodal shipments such as containers on flat cars); inland waterway traffic;
- pipeline movements (including principally petroleum and petroleum products and natural gas); and
- air freight.

The index does not include international or coastal steamship movements, private trucking, courier services, or the United States Postal Services.

The index does not include intercity bus, sightseeing services, taxi service, private car usage, or bicycling and other nonmotorized means of transportation.

The United States prices are the lowest of these listed countries. Those in France, Japan, Korea, the United Kingdom, and Germany paid, on average, more than six dollars per gallon in 2013. Data for China and India have been discontinued by the International Energy Agency.

Though the cost of crude oil certainly influences the price of gasoline, it is not the only factor which determines the price at the pump. Processing cost, transportation cost, and taxes also play a major part of the cost of a gallon of gasoline. The average price of a barrel of crude oil (in constant 2013 dollars) increased by 163% from 2000 to 2013, while the average price of a gallon of gasoline increased 77% in this same time period.

^a Includes Clean Fuel Initiatives and Pollution Prevention.

The average price of a new car in 2012 (\$25,517) was very close to the average price in 1916 (\$22,765) when adjusted for inflation. Average new car prices were at their lowest in 1940 (\$12,733). Since 1914 the highest average price was in the year 1998 (\$28,684).

Table 10.10
Average Price of a New Car, 1913–2012

Year	2012 Constant dollars	Year	2012 Constant dollars	Year	2012 Constant dollars	Year	2012 Constant dollars

(1990), *The Measurement of Durable Goods Prices*, National Bureau of Economic Research, Inc.; and U.S. Department of Commerce, Bureau of Economic Analysis (2013), National Income and Product Accounts.

In current dollars, import cars, on average, were less expensive than domestic cars until 1982. Since then, import prices have almost tripled, while domestic prices have more than doubled (current dollars).

^a Includes all vehicles produced in the United States regardless of manufacturer.

^b Adjusted by the Consumer Price Inflation Index.

The total cost of operating a car is the sum of the fixed cost (depreciation, insurance, finance charge, and license fee) and the variable cost (gas and oil, tires, and maintenance), which is related to the amount of travel. The gas and oil share of total cost was 18.4% in 2013 which is one of the highest shares in the series history.

^a Not seasonally adjusted.

The total number of employees involved in the manufacture of motor vehicles decreased by over 66% from 1990 to 2013 and by almost 78% for those involved in the manufacture of motor vehicle parts. Beginning in 2008, the share of production workers fell below 80% for manufacturers of both vehicles and parts.

^a OECD is the Organization for Economic Cooperation and Development. See Glossary for included countries.

Global Warming Potentials (GWP) were developed to allow comparison of the ability of each greenhouse gas to trap heat in the atmosphere relative to carbon dioxide. Extensive research has been performed and it has been discovered that the effects of various gases on global warming are too complex to be precisely summarized by a single number. Further understanding of the subject also causes frequent changes to estimates. Despite that, the scientific community has developed approximations, the latest of which are shown below. Most analysts use the 100-year time horizon.

Table 11.2
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide
(kilogram of gas per kilogram of carbon dioxide)

Gas	Lifetime (years)	Global warming potential direct effect for time horizons of	
		20 years	100 years
Carbon Dioxide (CO ₂)	5-200 ^a	1	1
Methane (CH ₄) ^b	12.4	86	34
Tetrafluoroethane (HFC-134a)	13.4	3,790	1,550
Trichlorofluoromethane (CFC-11)	45	7,020	5,350
Nitrous Oxide (N ₂ O)	121	268	298
Perfluoromethane (CF ₄)	50,000	4,950	7,350

Note: Includes climate-carbon feedbacks.

Nauels, Y. Zia, V. Bex and P.M. Midgley (eds)]. Cambridge university Press, Cambridge, United Kingdom and New York, NY, USA.

^a No single lifetime can be defined for carbon dioxide due to different rates of uptake by different removal processes.

^b These values do not include carbon dioxide from methane oxidation. Perturbation lifetime is used in the calculation of metrics.

Carbon dioxide emissions in 2012 were 5% higher than in 1990. This is a decrease from 2011. Carbon dioxide accounts for the majority of greenhouse gases.

Table 11.3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2012
(million metric tonnes carbon dioxide equivalent^a)

	Carbon dioxide	Methane	Nitrous oxide	High GWP gases ^b	Total
1990	5,075.1	632.0	398.5	90.2	6,195.8
2005	6,054.1	581.7	415.5	135.1	7,186.4
2008	5,887.1	602.0	423.1	133.3	7,045.5
2009	5,458.5	593.1	412.1	124.7	6,588.4
2010	5,664.4	582.4	409.1	134.8	6,790.7
2011	5,530.7	575.3	417.1	145.5	6,668.5
2012	5,319.2	564.5	409.9	150.5	6,444.1

Note: This greenhouse gas emissions inventory includes two “adjustments to energy consumption” which make the data different from Table 11.5. The adjustments are as follows:

- (1) Emissions from U.S. Territories are included.
- (2) International bunker fuels and military bunker fuels are excluded from the U.S. total.

Source:

U.S. Environmental Protection Agency, *Draft Inventory of U. S. Greenhouse Gas Emissions and Sinks: 1990-2012*. February 2014, www.epa.gov/climatechange/Downloads/ghgemissions/US-GHG-Inventory-2014-Main-Text.pdf

^a Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured by its estimated Global Warming Potential (See Table 11.2).

^b GWP = Global warming potential. Includes HFC-hydrofluorocarbons; PFC-perfluorocarbons; and SF₆-sulfur hexafluoride.

The transportation sector accounts for the largest share of total greenhouse gas emissions, due to the high share of carbon dioxide emissions. The industrial sector accounts for nearly the same amount of total greenhouse gas emissions as the transportation sector.

Table 11.4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012
(million metric tonnes carbon dioxide equivalent^a)

	Carbon dioxide	Methane	Nitrous oxide	Hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride	Total greenhouse gas emissions

^a Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured by its estimated Global Warming Potential (See Table 11.2).

Gases which contain carbon can be measured in terms of the full molecular weight of the gas or just in terms of their carbon content. This table presents carbon dioxide gas. The ratio of the weight of carbon to carbon dioxide is 0.2727. The transportation sector accounts for approximately one-third of carbon emissions.

Table 11.5

^a Includes energy from petroleum, coal, and natural gas. Electric utility emissions are distributed across consumption sectors.

Most U.S. transportation sector carbon dioxide emissions come from petroleum fuels (97.5%). Motor gasoline has been responsible for about two-thirds of U.S. carbon dioxide emissions over the last twenty years.

Table 11.6

The Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation (GREET) Model

greet.es.anl.gov

Sponsored by the U.S. Department of Energy's Office of Energy Efficiency and Renewable Energy (EERE), Argonne has developed a full life-cycle model called GREET™ (Greenhouse gases, Regulated Emissions, and Energy use in Transportation). It allows researchers and analysts to evaluate energy and emission impacts of various vehicle and fuel combinations on a full fuel-cycle/vehicle-cycle basis. The first version of GREET was released in 1996. Since then, Argonne has continued to update and expand the model. The most recent GREET versions are GREET 1 2013 version for fuel-cycle analysis and GREET 2 2013 version for vehicle-cycle analysis.

Figure 11.1. GREET Model

For a given vehicle and fuel system, GREET separately calculates the following:

- Consumption of total energy (energy in non-renewable and renewable sources), fossil fuels (petroleum, natural gas, and coal together), petroleum, coal and natural gas.
- Emissions of CO₂-equivalent greenhouse gases - primarily carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O).
- Emissions of six criteria pollutants: volatile organic compounds (VOCs), carbon monoxide (CO), nitrogen oxide (NO_x), particulate matter with size smaller than 10 micron (PM₁₀), particulate matter with size smaller than 2.5 micron (PM_{2.5}), and sulfur oxides (SO_x).

REET includes more than 100 fuel production pathways and more than 80 vehicle/fuel systems. These vehicle/fuel systems cover all major vehicle technologies in the market and R&D arena: conventional spark-ignition engine vehicles; spark-ignition, direct-injection engine vehicles; compression-ignition, direct-injection engine vehicles; hybrid electric vehicles; plug-in hybrid electric vehicles; battery-powered electric vehicles; and fuel-cell vehicles.

Recently, REET was expanded to include air and marine modes as well.

Figure 11.2. REET Model Feedstocks and Fuels

To address technology improvements over time, REET simulates vehicle/fuel systems over the period from 1990 to 2035, in five-year intervals.

For additional information about the REET model, see the REET website, or contact:

Michael Q. Wang
 Argonne National Laboratory

 phone: 630-252-2819
 fax: 630-252-3443
 email: mqwang@anl.gov

These are results from the GREET model (see preceding pages for description). For electricity, three different grid mixes are compared—the U.S., California, and RFC West. California’s (CA) grid mix was chosen due to the high renewable energy mix in that state. The RFC West is an electricity grid subregion that includes Indiana, Ohio, West Virginia, and parts of Illinois, Pennsylvania, Virginia, Kentucky, and Wisconsin. The RFC West uses a high amount of coal to produce electricity.

Figure 11.3. Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies

Note: H₂ = hydrogen.

Carbon Footprint

The carbon footprint measures a vehicle's impact on climate change in tons of carbon dioxide (CO₂) emitted annually. The following three tables show the carbon footprint for various vehicle classes. The sales-weighted average fuel economy rating for each vehicle class, based on 45% highway and 55% city driving, is used to determine the average annual carbon footprint for vehicles in the class. An estimate of 15,000 annual miles is used for each vehicle class and for each year in the series. The equation to calculate carbon footprint uses results of the GREET model version 1.8.

$$\text{CarbonFootprint} = \left(\text{CO}_2 \times \text{LHV} \times \frac{\text{AnnualMiles}}{\text{CombinedMPG}} \right) + (\text{CH}_4 + \text{N}_2\text{O}) \times \text{AnnualMiles}$$

where:

CO₂ = (Tailpipe CO₂ + Upstream Greenhouse Gases) in grams per million Btu

LHV = Lower (or net) Heating Value in million Btu per gallon

CH₄ = Tailpipe CO₂ equivalent methane in grams per mile

N₂O = Tailpipe CO₂ equivalent nitrous oxide in grams per mile

Note: The Environmental Protection Agency publishes tailpipe emissions in the *Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 through 2013*, www.epa.gov/otaq/fetrends.htm.

The production-weighted average annual carbon footprint for cars and car SUVs declined between 1975 and 2013.

^a Annual carbon footprint is based on 15,000 miles of annual driving. Includes tailpipe and upstream emissions.

The amount of carbon dioxide released into the atmosphere by a vehicle is primarily determined by the carbon content of the fuel. However, there is a small portion of the fuel that is not oxidized into carbon dioxide when the fuel is burned. The Environmental Protection Agency (EPA) has published information on carbon dioxide emissions from gasoline and diesel which takes the oxidation factor into account and is based on the carbon content used in EPA's fuel economy analyses. The other fuels listed come from the Energy Information Administration.

Table 11.11
Direct Carbon Dioxide Emissions from a Gallon of Fuel^a

	Grams per gallon	Kilograms per gallon	Pounds per gallon
Gasoline	8,887	8.9	19.6
Diesel	10,180	10.2	22.4
E85	1,340	1.3	3.0
B20	8,120	8.1	17.9
LPG	5,805	5.8	12.8
Propane	5,740	5.8	12.7
Aviation gasoline	8,320	8.3	18.3

^a The sums of subcategories may not equal total due to rounding.

Though gasoline-powered light vehicles continue to be responsible for the majority of carbon monoxide emissions from highway vehicles, the total pollution from light vehicles in 2005 is about a third of what it was in 1970. This is despite the fact that there were many more light vehicles on the road in 2005.

^a The sum of subcategories may not equal total due to rounding. The EPA's definition of volatile organic compounds excludes methane, ethane, and certain other nonphotochemically reactive organic compounds.

Gasoline-powered vehicles are responsible for over 95% of highway vehicle emissions of volatile organic compounds. VOC emissions from highway vehicles in 2005 were about one-quarter of the 1990 level.

EMISSION STANDARDS

The U.S. Environmental Protection Agency (EPA) regulates emissions from mobile sources including vehicles, engines, and motorized equipment that produce exhaust and evaporative emissions. Mobile sources contribute to four main air pollutants: carbon monoxide, hydrocarbons, nitrogen oxides, and particulate matter. The EPA not only sets standards for the vehicles, engines, and equipment, but also the fuels that they use. Tables 12.15 through Table 12.29 contain summaries of the current standards.

Acronyms Used on Tables 12.15 through Table 12.29

bhp	Brake horsepower-hour
CI	Compression-ignition
CO	Carbon Monoxide
DE	Diesel engine
g	Gram
g/kN	Grams per kilonewton
g/mi	Grams per mile
GVW	Gross vehicle weight
HC	Hydrocarbons
HCHO	Formaldehyde
HLDT	Heavy light-duty truck
Hp-hr	Horsepower-hour
kW	Kilowatt
kW-hr	Kilowatt-hour
LDT	Light-duty truck
LDV	Light-duty vehicle
LEV	Low-emission vehicle
LLDT	Light light-duty truck
LVW	Loaded vehicle weight
MDPV	Medium-duty passenger vehicle (8,500-10,000 lbs. GVWR)
NMHC	Non-methane hydrocarbon
NMOG	Non-methane organic gases
NO _x	Nitrogen oxides
PM	Particulate matter
ppm	Parts per million
rPR	Rated pressure ratio
SI	Spark-ignition
SULEV	Super-ultra-low-emission vehicle
ULEV	Ultra-low-emission vehicle
ZEV	Zero-emission vehicle

The Environmental Protection Agency issued final Tier 3 emission standards in 2014. The combined emissions of non-methane organic gases (NMOG) and nitrogen oxides (NOx) that new gasoline engines are allowed to produce from 2017 to 2025 are regulated in these new standards. These standards apply to a corporate average, meaning that some vehicles produced in those model years will emit more than the standard, while others will emit less, so long as the average for each Original Equipment Manufacturer (OEM) product offerings meets the standard.

Table 12.12
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards
(milligrams per mile)

Model Year	Light-duty vehicles and LDT1	LDT2, 3, 4, and medium-duty passenger vehicles	Class 2b trucks	Class 3 trucks
2016	^a	^a	333 ^b	548 ^b
2017	86	101	310 ^b	508 ^b
2018	79	92	278	451
2019	72	83	253	400
2020	65	74	228	349
2021	58	65	203	298
2022	51	56	178	247
2023	44	47	178	247
2024	37	38	178	247
2025 and later	30	30	178	247

Notes: Standards are for the Federal Test Procedure. Different standards apply for the Supplemental Federal Test Procedure. For vehicles over 6,000 lbs. gross vehicle weight rating (GVWR), the standards apply beginning in MY 2018.

LDT1 = Light trucks less than 6,000 lbs. GVWR and less than 3,750 lbs. loaded vehicle weight (LVW).

LDT2, 3, 4 = Light trucks less than 8,500 lbs. GVWR and more than 3,750 lbs. LVW.

Class 2b trucks = trucks 8,501-10,000 lbs. GVWR.

Class 3 trucks = trucks 10,001-14,000 lbs. GVWR.

40 CFR 86.007-11 Emission standards and supplemental requirements for 2007 and later model year diesel heavy-duty engines and vehicles. (Additional resources: www.epa.gov/otaq/standards)

^a Percentages apply to smoke opacity at acceleration/lug/peak modes.

^b Standards for 1990 apply only to diesel-fueled heavy-duty engines (HDE). Standards for 1991+ apply to both diesel- and methanol-fueled HDEs. Standards that apply to urban buses specifically are footnoted.

^c This standard applies to the following fueled engines for the following model years: methanol - 1990+, natural gas and liquefied petroleum gas (LPG) - 1994+.

^d For petroleum-fueled engines, the standard is for hydrocarbons (HC). For methanol-fueled engines, the standard is for total hydrocarbon equivalent (THCE).

^e Certification standard for urban buses for 1993.

^f Certification standard for urban buses from 1994-95.

^g Certification standard for urban buses from 1996 and later. The in-use standard is 0.07.

^h Load Response Test certification data submittal requirements take effect for heavy-duty diesel engines beginning in model year 2004. The following requirements take effect with the 2007 model year: steady-state test requirement and Not-to-Exceed (NTE) test procedures for testing of in-use engines. On-board diagnostic requirements applicable to heavy-duty diesel vehicles and engines up to 14,000 pounds gross vehicle weight rating (GVWR) phase in from the 2005 through 2007 model years.

Table 12.17 (continued)
**Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust
 Emission Standards**

ⁱ The modified averaging, banking, and trading program for 1998 and later model year engines applies only to diesel cycle engines. Credits generated under the modified program may be used only in 2004 and later model years.

^j For heavy-duty diesel engines, there are three options to the measurement procedures currently in place for alternative fueled engines: (1) use a THC measurement in place of a non-methane hydrocarbon (NMHC) measurement; (2) use a measurement procedure specified by the manufacturer with prior approval of the Administrator; or (3) subtract two percent from the measured THC value to obtain an NMHC value. The methodology must be specified at time of certification and will remain the same for the engine family throughout the engines' useful life. For natural gas vehicles, EPA allows the option of measuring NMHC through direct quantification of individual species by gas chromatography.

^k Starting in 2006, refiners must begin producing highway diesel fuel that meets a maximum sulfur standard of 15 parts per million (ppm).

^l Subject to a Supplemental Emission Test (1.0 x Federal Test Procedure [FTP] standard (or Family Emission Limit [FEL]) for nitrogen oxides [NOx], NMHC, and particulate matter [PM]) and a NTE test (1.5 x FTP standard [or FEL] for NOx, NMHC, and PM).

^m EPA adopted the lab-testing and field-testing specifications in 40 CFR Part 1065 for heavy-duty highway engines, including both diesel and Otto-cycle engines. These procedures replace those previously published in 40 Code of Federal Regulations (CFR) Part 86, Subpart N. Any new testing for 2010 and later model years must be done using the 40 CFR Part 1065 procedures.

ⁿ Two-phase in-use NTE testing program for heavy-duty diesel vehicles. The program begins with the 2007 model year for gaseous pollutants and 2008 for PM. The requirements apply to diesel engines certified for use in heavy-duty vehicles (including buses) with GVWRs greater than 8,500 pounds. However, the requirements do not apply to any heavy-duty diesel vehicle that was certified using a chassis dynamometer, including medium-duty passenger vehicles with GVWRs of between 8,500 and 10,000 pounds.

^o NOx and NMHC standards will be phased in together between 2007 and 2010. The phase-in will be on a percent-of-sales basis: 50 percent from 2007 to 2009 and 100 percent in 2010.

^p Note that for an individual engine, if the useful life hours interval is reached before the engine reaches 10 years or 100,000 miles, the useful life shall become 10 years or 100,000 miles, whichever occurs first, as required under Clean Air Act section 202(d).

Table 12.18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards

Engine or vehicle	Year	Gross vehicle weight (lbs)	HC ^a (g/bhp-hr)	NMHC ^b (g/bhp-hr)	NOx (g/bhp-hr)	NOx + NMHC ^c (g/bhp-hr)	PM (g/bhp-hr)	CO (g/bhp-hr)	Idle CO (% exhaust gas flow)	Formaldehyde	Useful life (years / miles)

40 CFR 86.091-10 Heavy-duty engine averaging, banking, and trading program for 1991 and later - Not available in the e-CFR

40 CFR Part 86 Subpart B Vehicle test procedures (Additional resources: www.epa.gov/otaq/standards)

^a For methanol-fueled engines, the standard is for total hydrocarbon equivalent (THCE).

^b For methanol and alcohol fueled vehicles the standard is for non-methane hydrocarbon equivalent (NMHCE).

^c For methanol fueled engines the standard is for nitrogen oxides (NOx) plus NMHCE.

^d Standards for heavy-duty engines are expressed in grams per brake horsepower-hour (g/bhp-hr). Starting with the 1998 model year, crankcase emissions are not allowed.

^e Standards for 1990 apply to gasoline and methanol-fueled engines.

^f Standards for 1991 and later apply to gasoline and methanol engines and are optional for natural gas and Liquefied Petroleum Gas-fueled engines through the 1996 model year.

^g For natural gas fueled engines the standard is 0.9 g/bhp-hr non-methane hydrocarbon (NMHC).

Table 12.18 (continued)
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards

^h For natural gas fueled engines the standard is 1.7 g/bhp-hr NMHC.

ⁱ The NO_x standard is 5.0 for all natural gas-fueled engines.

^j This standard applies to the following engines utilizing aftertreatment technology (except for methanol) for the following model years: gasoline/1990+; natural gas and LPG/1991+; methanol/1990+. Starting in 2005, engines certified to on-board diagnostics requirements are not required to meet the idle carbon monoxide (CO) standard.

^k Useful life is expressed in years or miles, whichever comes first. Useful life for the 1998 and later NO_x standard and for all 2004 standards is 10 years or 110,000 miles, whichever comes first.

^l Manufacturers can choose this standard or one of the following options: (1) a standard of 1.5 g/bhp-hr NMHC+NO_x that applies to the 2004 through 2007 model years, with complete heavy-duty vehicle standards taking effect in 2005; or (2) a standard of 1.5 g/bhp-hr NMHC + NO_x that would apply to the 2003 through 2007 heavy-duty engines and optionally to 2003 through 2006 complete heavy-duty vehicles.

^m Standard is expressed as non-methane organic gas, but compliance can optionally be shown using measurement of NMHC or total hydrocarbon (THC).

ⁿ Complete heavy-duty vehicles have the primary load-carrying container or device attached. Incomplete heavy-duty vehicles are certified to heavy-duty engine standards. Standards for complete heavy-duty vehicles are expressed in grams per mile (g/mi). Starting in 2005 (or 2003 or 2004 depending on the selected phase in option; see footnote l), complete heavy-duty vehicles under 14,000 lbs gross vehicle weight are tested on chassis-based rather than engine-based procedures and must meet these complete heavy-duty vehicle standards.

^o Although expressed as NMHC, compliance can optionally be shown using measurement of NMOG or THC.

^p At least 50 percent of a manufacturer's sales must meet these standards in 2008, with 100 percent required in 2009.

^q Gross vehicle weight ranges are more accurately specified as follows: 8,500 ≤GVW ≤10,000 and 10,000 < GVW < 14,000.

40 CFR 86.099-11 Emission standards for 1999 and later model year diesel heavy-duty engines and vehicles.

40 CFR 86.004-11 Emission standards for 2004 and later model year diesel heavy-duty engines and vehicles.

CFR 86.007-11 Emission standards and supplemental requirements for 2007 and later model year diesel heavy-duty engines and vehicles. (Additional resources: www.epa.gov/otaq/standards)

^a Applies to gasoline and methanol engines. Standard is hydrocarbon (HC) for gasoline engines, total hydrocarbon equivalent (THCE) for methanol engines.

^b For spark-ignition (SI) engines, standard applies to gasoline, methanol, natural gas, and liquefied petroleum gas engines. For compression-ignition (CI) engines, standard applies to methanol, natural gas, and liquefied petroleum gas engines. Standard is THCE for methanol engines, HC for others.

^c For SI engines, standard applies to gasoline and methanol engines. For CI engines, standard applies to methanol engines. Standard is THCE for methanol engines, HC for others.

^d Useful life is expressed in years or miles, whichever comes first.

^e Vehicles over 26,000 pounds gross vehicle weight may demonstrate compliance with an engineering design evaluation in lieu of testing.

^f A new enhanced evaporative test procedure applies, which is considerably more stringent than the previous test procedure despite the fact that the standard values do not change from prior years. Gasoline and methanol engines are phased in at the following rates of a manufacturer's sales for the specified model year: 1996: 20 percent; 1997: 40 percent; 1998: 90 percent; 1999: 100 percent.

^g A new enhanced evaporative test procedure applies, which is considerably more stringent than the previous test procedure despite the fact that the standard values do not change from prior years. Methanol-fueled vehicles are phased in at a rate of 90 percent of a manufacturer's production in 1998 and 100 percent in 1999.

Source:

40 CFR 98.112 = Exhaust emission standards

40 CFR 1039.101 = Exhaust emission standards for after 2014 model year

40 CFR 1039.102 = Exhaust emission standards for model year 2014 and earlier

40 CFR 1039 Subpart F = Exhaust emissions transient and steady state test procedures

40 CFR Part 86 Subpart I = Smoke emission test procedures

40 CFR Part 1065 = Test equipment and emissions measurement procedures (Additional resources: www.epa.gov/otaq/standards)

^a Smoke emissions may not exceed 20 percent during the acceleration mode, 15 percent during the lugging mode, and 50 percent during the peaks in either mode. Smoke emission standards do not apply to single-cylinder engines, constant-speed engines, or engines certified to a PM emission standard of 0.07 grams per kilowatt-hour (g/kW-hr) or lower. Smoke emissions are measured using procedures in 40 CFR Part 86 Subpart I.

^b Useful life and warranty period are expressed hours and years, whichever comes first.

^c Hand-startable air-cooled direct injection engines may optionally meet a PM standard of 0.60 g/kW-hr. These engines may optionally meet Tier 2 standards through the 2009 model years. In 2010 these engines are required to meet a PM standard of 0.60 g/kW-hr.

^d Useful life for constant speed engines with rated speed 3,000 revolutions per minute (rpm) or higher is 5 years or 3,000 hours, whichever comes first.

^e These Tier 3 standards apply only to manufacturers selecting Tier 4 Option 2. Manufacturers selecting Tier 4 Option 1 will be meeting those standards in lieu of Tier 3 standards.

^f A manufacturer may certify all their engines to either Option 1 or Option 2 sets of standards starting in the indicated model year. Manufacturers selecting Option 2 must meet Tier 3 standards in the 2008-2011 model years.

^g These standards are phase-out standards. Not more than 50 percent of a manufacturer's engine production is allowed to meet these standards in each model year of the phase out period. Engines not meeting these standards must meet the final Tier 4 standards.

^h These standards are phased in during the indicated years. At least 50 percent of a manufacturer's engine production must meet these standards during each year of the phase in. Engines not meeting these standards must meet the applicable phase-out standards.

ⁱ For Tier 1 engines the standard is for total hydrocarbons.

^j The NOx standard for generator sets is 0.67 g/kW-hr.

^k The PM standard for generator sets is 0.03 g/kW-hr.

These standards apply to gasoline and propane industrial equipment such as forklifts, generators, airport service equipment, compressors and ice-grooming machines.

**Table 12.23
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards**

	Tier	Year	General duty-cycle standards		Alternative standards for severe-duty engines		Field testing standards		Useful life (years/hours)	
			HC+NOx ^a (g/kW-hr)	CO (g/kW-hr)	HC+NOx ^a (g/kW-hr)	CO (g/kW-hr)	HC+NOx ^a (g/kW-hr)	CO (g/kW-hr)		
Federal ^b	1 ^c	2004-2006	4.0 ^d	50.0	4.0 ^d	130.0	-	-	7 / 5,000 ^e	
			2.7 ^f	4.4 ^f	2.7	130.0	3.8 ^f	6.5 ^f	7 / 5,000 ^e	
			Evaporative emission standards (for engines fueled by a volatile liquid fuel)							
		2 ^f	2007+	Fuel line permeation	Nonmetallic fuel lines must meet the permeation specifications of SAE J2260 (November 1996)					5 / -
				Diurnal emissions	Evaporative HC emissions may not exceed 0.2 grams per gallon of fuel tank capacity					
			Running loss	Liquid fuel in the fuel tank may not reach boiling during continuous engine operation in the final installation at an ambient temperature of 30°C						

Sources:

40 CFR 1048.101 = Exhaust emission standards

40 CFR 1048.105 = Evaporative emission standards

40 CFR 1048.110 = Engine diagnostic requirements (Additional resources: www.epa.gov/otaq/standards)

^a The numerical emission standards for hydrocarbons (HC) must be met based on the following types of hydrocarbon emissions for engines powered by the following fuels: (1) non-methane hydrocarbons (NMHC) for natural gas; (2) total hydrocarbon equivalent (THCE) for alcohol; and (3) total hydrocarbons (THC) for other fuels.

^b Voluntary Blue Sky standards for large spark-ignition (SI) engines are available. Engines with displacement at or below 1,000 cubic centimeters (cc) and maximum power at or below 30 kilowatts (kW) may be certified under the program for small SI engines.

^c Emission standards are based on testing over a steady-state duty-cycle.

^d The Tier 1 HC plus nitrogen oxides (NOx) emission standard for in-use testing is 5.4 grams per kW-hour (g/kW-hr).

^e Useful life is expressed in years and hours, whichever comes first. These are the minimum useful life requirements. For severe-duty engines, the minimum useful life is seven years or 1,500 hours of operation, whichever comes first. A longer useful life in hours is required if: (a) the engine is designed to operate longer than the minimum useful life based on the recommended rebuild interval; or (b) the basic mechanical warranty is longer than the minimum useful life.

^f Optional engine certification is allowed according to the following formula: $(\text{HC}+\text{NOx}) \times \text{CO}^{0.784} \leq 8.57$. The HC+NOx and carbon monoxide (CO) emission levels selected to satisfy this formula, rounded to the nearest 0.1 g/kW-hr, become the emission standards that apply for those engines. One may not select an HC+NOx emission standard higher than 2.7 g/kW-hr or a CO emission standard higher than 20.6 g/kW-hr.

40 CFR 1033.101 = Emission Standards and Useful Life

^a These standards apply to locomotives that are propelled by engines with total rated horsepower (hp) of 750 kilowatts (kW) (1006 hp) or more, unless the owner chooses to have the equipment certified to meet the requirements of locomotives. This does not include vehicles propelled by engines with total rated horsepower of less than 750 kW (1006 hp); see the requirements in 40 Code of Federal Regulations (CFR) Parts 86, 89 and 1039. The test procedures specify chassis-based testing of locomotives. These test procedures include certification testing, production line testing, and in-use testing using the Federal Test Procedure (FTP) when the locomotive has reached between 50-70 percent of its useful life.

^b Line-haul locomotives are powered by an engine with a maximum rated power (or a combination of engines having a total rated power) greater than 2300 hp. Switch locomotives are powered by an engine with a maximum rated power (or a combination of engines having a total rated power) of 2300 hp or less.

^c The Tier 0 standards apply to locomotives manufactured after 1972 when they are manufactured or remanufactured. Note that interim standards may apply for Tier 0 or Tier 1 locomotives remanufactured in 2008 or 2009, or for Tier 2 locomotives manufactured or remanufactured in 2008-2012.

^d Line-haul locomotives subject to the Tier 0 through Tier 2 emission standards must also meet switch standards of the same tier.

^e The Tier 0 standards apply for 1993-2001 locomotives not originally manufactured with a separate loop intake air cooling system.

^f Tier 3 line-haul locomotives must also meet Tier 2 switch standards.

^g Manufacturers using credits may elect to meet a combined nitrogen oxides (NOx) plus hydrocarbon (HC) standard of 1.4 grams per brakehorsepower-hour (g/bhp-hr) instead of the otherwise applicable Tier 4 NOx and HC standards.

^h Tier 1 and Tier 2 switch locomotives must also meet line-haul standards of the same tier.

ⁱ The numerical emission standards for HC must be met based on the following types of hydrocarbon emissions for locomotives powered by the following fuels: (1) alcohol: total hydrocarbon equivalent (THCE) emissions for Tier 3 and earlier locomotives, and non-methane hydrocarbon equivalent (NMHCE) for Tier 4; (2) natural gas and liquefied petroleum gas: non-methane hydrocarbon (NMHC) emissions; and (3) diesel: total hydrocarbon (THC) emissions for Tier 3 and earlier locomotives, and NMHC for Tier 4.

Table 12.24 (continued)
Locomotives – Exhaust Emission Standards

^j Manufacturers may elect to meet a combined NO_x+HC standard of 1.4 g/bhp-hr instead of the otherwise applicable Tier 4 NO_x and HC standards.

^k The line-haul particulate matter (PM) standard for newly remanufactured Tier 2 locomotives is 0.20 g/bhp-hr until January 1, 2013, except as specified in 40 CFR Part 1033.150(a).

^l The switch PM standard for new Tier 2 locomotives is 0.24 g/bhp-hr until January 1, 2013, except as specified in 40 CFR Part 1033.150(a).

^m The smoke opacity standards apply only for locomotives certified to one or more PM standards or Family Emission Limits (FEL) greater than 0.05 g/bhp-hr. Percentages apply to smoke opacity at steady state/30-second peak/3-second peak, as measured continuously during testing.

ⁿ Useful life and warranty period are expressed in megawatt-hours (mw-hr), years, or miles, whichever comes first. Manufacturers are required to certify to longer useful lives if their locomotives are designed to last longer between overhauls than the minimum useful life value.

^o For locomotives originally manufactured before January 1, 2000, and not equipped with mw-hr meters.

These standards apply to auxiliary and propulsion engines used by all types of recreational and commercial vessels, from small fishing boats to ocean-going ships.

Table 12.25 (continued)
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards

Sources (continued):

40 CFR 1042.107 = Tiers 3 and 4 evaporative emission standards engines using a volatile liquid fuel (e.g., methanol)

40 CFR 1042.120 = Tiers 3 and 4 warranty period

40 CFR 1042 Subpart F = Tiers 3 and 4 test procedures (Additional resources: www.epa.gov/otaq/standards)

^a For Tiers 1 and 2, Category 1 marine engines are greater than or equal to 37 kilowatts (kW) and have a displacement less than 5.0 liters per cylinder (L/cylinder); Category 2 marine engines have a displacement greater than or equal to 5.0 L/cylinder and less than 30 L/cylinder; and Category 3 marine engines have a displacement greater than or equal to 30.0 L/cylinder. For Tiers 3 and 4, Category 1 represents engines up to 7 L/cylinder displacement; and Category 2 includes engines from 7 to 30 L/cylinder. The definition of Category 3 marine engines remains the same.

^b Tiers 1 and 2 for marine engines less than 37 kW are subject to the same emission standards as for land-based engines. See Table 1 in 40 Code of Federal Regulations (CFR) Part 89.112 and 40 CFR Part 89.104.

^c For Tiers 1 and 2, this refers to the rated power; for Tiers 3 and 4, this refers to the maximum engine power.

^d Total hydrocarbon (THC) plus nitrogen oxides (NOx) for Tier 2 standards.

^e Useful life is expressed in hours or years, whichever comes first. For Tiers 3 and 4, a longer useful life in hours for an engine family must be specified if either: 1) the engine is designed, advertised, or marketed to operate longer than the minimum useful life; or 2) the basic mechanical warranty is longer than the minimum useful life.

^f Warranty period is expressed in years and hours, whichever comes first.

^g For Tiers 3 and 4, there are no evaporative emission standards for diesel-fueled engines, or engines using other nonvolatile or nonliquid fuels (e.g., natural gas). If an engine uses a volatile liquid fuel, such as methanol, the engine's fuel system and the vessel in which the engine is installed must meet the evaporative emission requirements of 40 Code of Federal Regulations (CFR) Part 1045 that apply with respect to spark-ignition engines. Manufacturers subject to evaporative emission standards must meet the requirements of 40 CFR 1045.112 as described in 40 CFR 1060.1(a)(2).

^h Indicates the model years for which the specified standards start.

ⁱ N is the maximum test speed of the engine in revolutions per minute (rpm).

^j Manufacturers of Tier 3 engines greater than or equal to 19 kW and less than 75 kW with displacement below 0.9 L/cylinder may alternatively certify some or all of their engine families to a particulate matter (PM) emission standard of 0.20 grams per kilowatt-hour (g/kW-hr) and a NOx+HC emission standard of 5.8 g/kW-hr for 2014 and later model years.

^k The applicable Tier 2 NOx+HC standards continue to apply instead of the Tier 3 values for engines at or above 2000 kW.

^l These Tier 3 standards apply to Category 1 engines below 3700 kW except for recreational marine engines at or above 3700 kW (with any displacement), which must meet the Tier 3 standards specified for recreational marine engines with a displacement of 3.5 to 7.0 L/cylinder.

^m The following provisions are optional: 1) Manufacturers may use NOx credits to certify Tier 4 engines to a NOx+HC emission standard of 1.9 g/kW-hr instead of the NOx and HC standards. See 40 CFR 1042.101(a)(8)(i) for more details. 2) For engines below 1000 kW, manufacturers may delay complying with the Tier 4 standards until October 1, 2017. 3) For engines at or above 3700 kW, manufacturers may delay complying with the Tier 4 standards until December 31, 2016.

ⁿ The Tier 4 standard is for HC (not HC+NOx) in g/kW-hr.

^o These Tier 3 standards apply to Category 2 engines below 3700 kW; no Tier 3 standards apply for Category 2 engines at or above 3700 kW, although there are Tier 4 standards that apply.

Table 12.25 (continued)
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards

^p An alternative set of Tier 3 and Tier 4 standards for PM, NO_x, and HC are available for Category 2 engines at or above 1400 kW, but must be applied to all of a manufacturer's engines in a given displacement category in model years 2012 through 2015.

Tier	Maximum engine power	Model year	PM (g/kW-hr)	NO _x (g/kW-hr)	HC (g/kW-hr)
3	kW ≥1400	2012-2014	0.14	7.8 NO _x +HC	
4	1400 ≤kW < 3700	2015	0.04	1.8	0.19
	kW ≥3700	2015	0.06	1.8	0.19

^q Interim Tier 4 PM standards apply for 2014 and 2015 model year Category 2 engines with per-cylinder displacement at or above 15.0 liters: 0.34 g/kW-hr for engines 2000 = kW < 3000, and 0.27 g/kW-hr for engines 3300 = kW < 3700.

These standards apply to gasoline boats and personal watercraft, such as pleasure boats, jet-skis, outboard engines and sterndrive/inboard engines.

**Table 12.26
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards**

Engine type	Model year	HC + NOx ^a (g/KW-hr)		CO ^c (g/KW-hr)		Useful life (hours/years) ^d
		P ≤ 4.3 kW ^b	P > 4.3 kW ^b	P ≤ 4.3 kW ^b	P > 4.3 kW ^b	
Federal ^c Personal watercraft & outboard marine engines	1998	278 ABT	$(0.917 \times (151 + 557/P^{0.9}) + 2.44)$ [ABT]	--	--	350 / 5
	1999	253 ABT	$(0.833 \times (151 + 557/P^{0.9}) + 2.89)$ [ABT]	--	--

40 CFR 91.104 = Outboard and personal watercraft (PWC) exhaust emission standards (1998-2009)

40 CFR 91.105 = Outboard and PWC useful life (1998-2009)

40 CFR 1045.103 = Outboard and PWC exhaust emission standards (2010+)

40 CFR 1045.105 = Sterndrive/Inboard exhaust emission standards

40 CFR 1045.107 = Not-to-exceed exhaust emission standards (Additional resources: www.epa.gov/otaq/standards)

^a The numerical emission standards for hydrocarbons (HC) must be met based on the following types of HC emissions for engines powered by the following fuels: (1) total hydrocarbon equivalent for alcohol; (2) non-methane hydrocarbon for natural gas; and (3) total hydrocarbons for other fuels.

Table 12.26 (continued)
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards

^b P stands for the maximum engine power in kilowatts.

^c Manufacturers may generate or use emission credits for averaging, but not for banking or trading.

^d Useful life and warranty period are expressed hours or years of operation (unless otherwise indicated), whichever comes first.

^e The test procedure for federal standards uses the International Organization for Standardization (ISO) 8178 E4 5-Mode Steady-State Test Cycle.

^f Also applies to model year (MY) 1997 engine families certified pursuant to 40 Code of Federal Regulations (CFR) 91.205.

^g Not-to-exceed emission standards specified in 40 CFR 1045.107 also apply.

^h A longer useful life in terms of hours must be specified for the engine family if the average service life is longer than the minimum value as described in 40 CFR 1045.103(e)(3).

ⁱ The useful life may not be shorter than: (1) 150 hours of operation; (2) the recommended overhaul interval; or (3) the engine's mechanical warranty. A longer useful life must be specified in terms of hours if the average service life is longer than the minimum value as described in 40 CFR 1045.105(e)(3).

These standards apply to land-based recreational vehicles, such as snowmobiles, dirt bikes, all-terrain vehicles and go-karts.

**Table 12.27
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards**

Vehicle	Phase	Year	HC ^a g/kW-hr	HC + NOx g/km	CO		Minimum useful life (hours/years/km) ^b
					g/kW-hr	g/km	
Snowmobiles ^c	1 ^d	2006+	100 [ABT]	-	275 [ABT]	-	400 / 5 / 8,000
	2	2010- 2011	75 [ABT]	-	275 [ABT]	-	
	3 ^e	2012+	150 ^f [ABT]	-	400 ^f [ABT]	-	
Federal Off-highway motorcycles ^g	1 ^d	2006+	-	2.0 ^{h,i} [ABT]	-	25 ^{h,i} [ABT]	> 70 cc Displacement: - / 5 / 10,000 ≤70 cc Displacement: - / 5 / 5,000
ATVs ^g	1 ^d	2006+	-	1.5 ^{i,k} [ABT]	-	35 ^k [ABT]	≥100 cc Displacement: 1000 / 5 / 10,000 < 100 cc Displacement: 500 / 5 / 5,000

Sources:

40 CFR 1051.101-115 = Emission standards (Additional resources: www.epa.gov/otaq/standards)

^a The numerical emission standards for hydrocarbons (HC) must be met based on the following types of hydrocarbon emissions for recreational engines and vehicles powered by the following fuels: (1) non-methane hydrocarbons for natural gas; (2) total hydrocarbon equivalent for alcohol; and (3) total hydrocarbons for other fuels.

^b Useful life is expressed in hours, years, or kilometers, whichever comes first; warranty period is expressed in hours, months, or kilometers (km), whichever comes first. Nonroad recreational engines and vehicles must meet emission standards over their full useful life. A longer useful life in terms of km and hours must be specified for the engine family if the average service life is longer than the minimum value as described in 40 Code of Federal Regulations (CFR) 1051 Subpart B.

^c Test procedures for snowmobiles use the equipment and procedures for spark-ignition engines in 40 CFR Part 1065.

^d Phase 1 standards will be phased in: 50 percent by 2006, 100 percent by 2007.

^e Litigation on the November 2002 final rule resulted in a court decision that requires EPA to clarify the evidence and analysis upon which the Phase 3 carbon monoxide (CO) and HC standards were based. EPA will address this in a future rulemaking.

^f These are the maximum allowable family emission limits (FEL). The HC and CO standards are defined by a functional relationship as described in 40 CFR 1051.103(a)(2).

^g For off-highway motorcycles and ATVs, chassis dynamometer emissions test procedures are specified in 40 CFR Part 86, Subpart F and engine dynamometer emissions test procedures are specified in 40 CFR Part 1065.

^h Maximum allowable FEL: 20.0 grams per kilometer (g/km) for HC plus nitrogen oxides (NOx) and 50 g/km for CO.

Table 12.27 (continued)
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards

ⁱ Manufacturers may certify off-highway motorcycles with engines that have total displacement of 70 cubic centimeters (cc) or less to an HC+NO_x standard of 16.1 grams per kilowatt-hour (g/kW-hr) (with an FEL cap of 32.2 g/kW-hr) and a CO standard of 519 g/kW-hr.

^j Maximum allowable FEL for HC+NO_x is 20.0 g/km.

^k Manufacturers may certify all-terrain vehicles with engines that have total displacement of less than 100 cc to an HC+NO_x standard of 25.0 g/KW-hr (with an FEL cap of 40.0 g/kW-hr) and a CO standard of 500 g/kW-hr.

The latest standards were established by the Environmental Protection Agency in conjunction with the Tier 3 emission standards.

Table 12.28
Gasoline Sulfur Standards

	Regulated entity	Refinery average and per-gallon cap by year (ppm)

Source:

40 CFR Part 80 Subpart H (Additional resources: www.epa.gov/otaq/standards)

^a Standards effective January 1 at the refinery gate.

^b No Refinery Average Standard applies in 2004; Corporate Average Standard applies in 2004 (120 ppm) and 2005 (90 ppm).

^c Cap exceedances up to 50 ppm in 2004 must be made up in 2005.

^d Geographic Phase-in Area (GPA) refiners must also comply with the corporate average standards in 2004 and 2005 if less than 50% of the refiner's gasoline is designated as GPA gasoline in a given compliance period.

^e GPA refiners may receive an additional two years (i.e., through 2008) to comply with the 30 / 80 ppm gasoline sulfur standards in exchange for producing 95% of their highway diesel fuel at the 15 ppm sulfur standard by June 1, 2006.

^f Small refiners may receive an additional two years (i.e., through 2009) to comply with the 30 / 80 ppm gasoline sulfur standards via a hardship demonstration.

^g Small refiners may receive an additional three years (i.e., through 2010) to comply with the 30 / 80 ppm gasoline sulfur standards in exchange for producing 95% of their highway diesel fuel at the 15 ppm sulfur standard by June 1, 2006.

^h Small refiners may receive a 20% increase in their annual average and per-gallon cap standards in exchange for producing 95% of their highway, nonroad, locomotive, and marine diesel fuel at the 15 ppm sulfur standard by June 1, 2006.

ⁱ Downstream standards are effective February 1 at any downstream location other than at a retail outlet or wholesale purchaser-consumer (e.g., pipelines and terminals) and March 1 at any downstream location.

^j Downstream standards for gasoline that is not blended with small refiner gasoline are shown. Refer to the Code of Federal Regulations (CFR) for the downstream standards that apply when a gasoline blend includes small refiner gasoline.

^k

1997-98 Refinery baseline sulfur level (ppm)	Small refiner interim gasoline sulfur standards (ppm) 2004 - 2007	
	Average	Cap
0 to 30	30	300
31 to 200	baseline level	300
201 to 400	200	300
401 to 600	50% of baseline	1.5 x avg. standard
601 and above	300	450

Ultra-low sulfur diesel (ULSD) fuel is necessary for new advanced emission control technologies. It also reduces particulate matter in the existing fleet of nonroad engines and equipment.

Table 12.29
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards

	Regulated entity	Covered fuel	Per-gallon maximum sulfur level by year (ppm)

Source:

40 CFR Part 80 Subpart I (Additional resources: www.epa.gov/otaq/standards)

^a For highway diesel fuel, standards are effective June 1 for refiners/importers, September 1 for pipelines and terminals, and October 15 for retailers and wholesale purchaser-consumers. Anti-downgrading provisions effective October 16, 2006.

^b For Nonroad, Locomotive, and Marine (NRLM) diesel fuel, standards are effective June 1 for refiners; downstream requirements apply for Northeast/Mid-Atlantic area only (August 1 for terminals, October 1 for retailers and wholesale purchaser-consumers, and December 1 for in-use).

^c For highway diesel fuel, standards are effective June 1 for refiners/importers, October 1 for pipelines and terminals, and December 1 for retailers and wholesale purchaser-consumers.

^d For NRLM diesel fuel, standards are effective June 1 for refiners, August 1 for terminals, October 1 for retailers and wholesale purchaser-consumers, and December 1 for in-use.

^e Excluding the Northeast and Alaska.

^f Excluding the Northeast, with approval in Alaska.

APPENDIX A

SOURCES & METHODOLOGIES

SOURCES & METHODOLOGIES

This appendix contains documentation of the estimation procedures used by ORNL. The reader can examine the methodology behind the estimates and form an opinion as to their utility. The appendix is arranged by subject heading. Only tables which contain ORNL estimations are documented in Appendix A; all other tables have sources listed at the bottom of the table. Since abbreviations are used throughout the appendix, a list of abbreviations is also included.

Contents of Appendix A

List of Abbreviations Used in Appendix A	A-4
Energy Use Sources	A-5
Highway energy use	A-5
Off-highway energy use	A-14
Nonhighway energy use	A-14
Passenger Travel and Energy Use	A-24
Highway Passenger Mode Energy Intensities	A-28
Nonhighway Mode Energy Intensities	A-31
Freight Mode Energy Intensities	A-32
Car/Light Truck Shares	A-33

Note: CNG is reported in diesel-gallon equivalents.

^a Data are not available.

Intercity and School:

Eno Transportation Foundation, *Transportation in America, 2001, Nineteenth Edition*, 2003, Washington, DC, pp. 20–23. School bus fuel was assumed to be 90% diesel fuel and 10% gasoline based on estimates from the National Association of State Directors of Pupil Transportation Services. Intercity bus fuel was assumed to be 100% diesel.

Table A.4
Intercity and School Bus Fuel Use

Year	Intercity (million gallons)	School (million gallons)

*Estimated using the rate of change of bus vehicle-miles traveled from FHWA Highway Statistics, Table VM-1 (recently revised).

Trucks***Light Trucks:***

Fuel use in gallons (1970-2007) – DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996 and DOT, FHWA, *Highway Statistics Summary to 1995*.

Fuel use in gallons (2008 – 2012) – Results of a model developed by ORNL to estimate data for cars and light trucks since the FHWA discontinued their VM-1 series showing cars and light trucks separately. The model uses data from FHWA *Highway Statistics 2012*, EPA *Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2013*, and R.L. Polk to estimate the number of vehicles, vehicle-miles of travel, energy use, and fuel efficiency of cars and light trucks. Documentation of the model will be published in an ORNL report, forthcoming.

Fuel type distribution – Fuel use was distributed among fuel types using the percentages shown in Table A.1. The FHWA discontinued gasohol data in 2005. Therefore, data from EIA, *Alternatives to Traditional Transportation Fuels*, 2006-2011, Table C.1 were used.

Table A.5
Light Truck Fuel Use and Fuel Type Shares for Calculation of Energy Use

Year	Fuel use (million gallons)	Source for gasohol shares	Source for gasoline/diesel /lpg shares	Shares by fuel type

^a Data are not continuous between 2008 and 2009 due to changes in source.

Medium/Heavy Trucks:

DOT, FHWA, *Highway Statistics 2012*, Table VM-1 and annual editions back to 1996 and DOT, FHWA, *Highway Statistics Summary to 1995*. The FHWA made methodology changes for *Highway Statistics 2009*. At that time, they published historical data back to 2007 which do not match the previous data. Total gallons for medium/heavy trucks are the sum of single-unit trucks and combination trucks.

Table A.6
Medium/Heavy Truck Fuel Use and Fuel Type Shares for Calculation of Energy Use

Year	Fuel use (million gallons)	Source for fuel type shares	Shares by fuel type

^a Data are not continuous between 2006 and 2007 due to changes in methodology. See source for details.

Shares of Class 3-6 and 7-8 energy use by fuel type were calculated from the 2002 Vehicle Inventory and Use Survey (VIUS) and applied to all years 1970-2012.

Table A.7
Share of Medium and Heavy Truck Energy Use

Fuel type	Share of energy use		Total
	Class 3-6	Class 7-8	
Gasoline	92%	8%	100%
Diesel	14%	86%	100%
LPG	99%	1%	100%

Off-highway energy use

U.S. Environmental Protection Agency, NONROAD2008a model, results generated May 2014. Gallons of fuel by fuel type were produced for agricultural equipment, airport equipment, construction and mining equipment, industrial equipment, lawn and garden equipment, logging equipment, railroad maintenance equipment, and recreational equipment. Some non-transportation-related equipment, such as generators, chain saws, compressors, and pumps, were excluded from the data.

Nonhighway energy use

Air

General Aviation:

DOT, FAA, *On-line General Aviation Activity and Air Taxi Activity Surveys: Annual Summary Report Calendar Year 2012*, Table 5.1, and annual. 2011 Data: *Aviation Forecasts*, Tables 28 and 29, May 2013. (Additional resources: www.faa.gov/data_research/aviation_data_statistics/)

Pipeline

The sum of natural gas, crude petroleum and petroleum product, and coal slurry and water.

Natural Gas:

The amount of natural gas used to transport natural gas was defined as "pipeline fuel" as reported in DOE, EIA, *Natural Gas Annual 2013*, Table 1. Cubic feet were converted to Btu using 1,031 Btu/ft³. Electricity use was estimated using the following procedure as reported on p. 5-110 of J. N. Hooker et al., End Use Energy Consumption DataBase: Transportation Sector. The energy consumption of a natural gas pipeline was taken to be the energy content of the fuel used to drive the pumps. Some 94% of the installed pumping horsepower was supplied by natural gas. The remaining 6% of the horsepower was generated more efficiently, mostly by electric motors. The energy consumed by natural gas pipeline pumps that were electrically powered was not known. In order to estimate the electricity consumed, the Btu of natural gas pipeline fuel consumed was multiplied by a factor of 0.015. From this computed value, electricity efficiency and generation loss must be taken into account. The electricity energy use in Btu must be converted to kWhr, using the conversion factor 29.305×10^{-5} kWhr/Btu. Electricity generation and distribution efficiency was 29%. When generation and distribution efficiency are taken into account, 1 kWhr equals 10,339 Btu.

Crude petroleum and petroleum product:

J. N. Hooker, *Oil Pipeline Energy Consumption and Efficiency*, ORNL-5697, ORNL, Oak Ridge, TN, 1981. (Data held constant; Latest available data.)

Coal slurry and water:

W. F. Banks, Systems, Science and Software, *Energy Consumption in the Pipeline Industry*, LaJolla, CA, October 1977. (Data held constant; Latest available data.)

Table A.12
Pipeline Fuel Use

Year	Natural gas (million cubic feet)	Estimated natural gas pipeline electricity use (million kWhr)	Electricity constant (trillion btu)
1970	722,166	3,272.9	212.1
1971	742,592	3,365.4	212.1

1991	601,305	2,725.1	212.1
1992	587,710	2,663.5	212.1
1993	624,308	2,829.4	212.1
1994	685,362	3,106.1	212.1
1995	700,335	3,173.9	212.1
1996	711,446	3,224.3	212.1
1997	751,470	3,405.7	212.1
1998	635,477	2,880.0	212.1
1999	645,319	2,924.6	212.1
2000	642,210	2,910.5	212.1
2001	624,964	2,832.3	212.1
2002	666,920	3,022.5	212.1
2003	591,492	2,680.7	212.1
2004	566,187	2,566.0	212.1
2005	584,026	2,646.8	212.1
2006	584,213	2,647.7	212.1
2007	621,364	2,816.0	212.1
2008	647,956	2,936.6	212.1
2009	670,174	3,037.2	212.1
2010	674,124	3,055.1	212.1
2011	687,784	3,117.0	212.1
2012	728,163	3,300.0	212.1
Heat content used for conversion to btu:	1,031 btu/cubic foot	10,339 Btu/kWhr	

Note: Formula for estimating electricity use for natural gas pipelines is:
 Natural gas use (in million cubic ft) \times 1,031 btu/cubic ft \times 0.015 \times 29.305 $\times 10^{-5}$ kWhr/btu.

Rail

2001	96,846	455,703
2002	84,432	518,306
2003	74,621	536,950
2004	68,605	550,695
2005	65,477	531,377
2006	62,463	548,856
2007	61,824	577,864
2008	63,428	582,022
2009	61,704	564,968
2010	63,474	558,662
2011	63,450	555,425
2012	63,058	549,201
Heat content used for conversion to Btu	138,700 Btu/gallon	10,339 Btu/kWhr

Calculation of Million Barrels per Day Crude Oil Equivalent

One gallon of gasoline, diesel fuel, or lpg is estimated to be the equivalent of one gallon of crude oil. Petroleum used for electricity was calculated using the following formula:

$$(((BTU*S)/G]/P }/365)/1000$$

- BTU = Btus of electricity from Table 2.5
 S = Share of petroleum used in making primary electricity (Calculated from Table 2.6 from the EIA, Monthly Energy Review)
 G = Electricity generation and distribution (assumed 29%)
 P = Btus per barrel of petroleum product (Table A3 from the EIA, Monthly Energy Review).

Passenger Travel and Energy Use

Cars

Number of vehicles – DOT, FHWA, *Highway Statistics 2012*, Table MV-1 and annual editions back to 2009.

Vehicle-miles – See Appendix A “Car and Light Truck Shares” section.

Passenger-miles – Vehicle-miles multiplied by an average load factor.

Load factor – 2009 NHTS shows car load factor as 1.55 persons per vehicle.

Energy intensities –

Btu per vehicle-mile – Car energy use divided by vehicle-miles.

Btu per passenger-mile – Car energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-5. Data series shown in Table 2.7.

Light Trucks

Number of vehicles – DOT, FHWA, *Highway Statistics 2012*, Table MV-9 and annual editions back to 2009. Columns for pickups, vans, sport utility vehicles, and other light trucks.

Vehicle-miles – See Appendix A “Car and Light Truck Shares” section.

Passenger-miles – Vehicle-miles multiplied by an average load factor.

Load factor – 2009 NHTS shows personal light truck load factor as 1.84 persons per vehicle.

Energy intensities -

Btu per vehicle-mile – Personal light truck energy use divided by personal light truck vehicle-miles.

Btu per passenger-mile – Personal light truck energy use divided by personal light truck passenger-miles.

Energy use – See Energy Use Sources, p. A-10, A-12 (light trucks, medium/heavy trucks). Data by truck type were multiplied by the shares of truck fuel use which are for personal use (Table A.17) which were derived by ORNL from the 2002 VIUS Micro Data File on CD.

Table A.17
Share of Trucks, Truck Travel,
and Fuel Use for Personal Travel

Personal trucks	
85.6%	2-axle, 4-tire trucks
26.9%	Other single-unit and combination trucks
Personal truck travel	
80.9%	2-axle, 4-tire trucks
13.1%	Other single-unit and combination trucks
Personal truck fuel use	
78.0%	2-axle, 4-tire trucks
6.0%	Other single-unit and combination trucks

Note: Since these shares come from the 2002 VIUS, they may underestimate the amount of personal trucks, truck travel, and energy use for 2012.

Motorcycles

Number of vehicles, vehicle-miles – DOT, FHWA, *Highway Statistics 2012*, Table VM-1.

Passenger-miles – Vehicle-miles multiplied by an average load factor.

Load factor - 2009 NHTS shows motorcycle load factor as 1.16 persons per vehicle.

Energy intensities –

Btu per vehicle-mile – Motorcycle energy use divided by vehicle-miles.

Btu per passenger-mile – Motorcycle energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-7. Data series shown in Table 2.7.

Demand Response

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Energy use divided by vehicle-miles.

Btu per passenger-mile – Energy use divided by passenger-miles.

Energy use – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014.

Buses

Transit

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Data series shown on Table 5.18.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Transit bus energy use divided by transit bus vehicle-miles.

Btu per passenger-mile – Transit bus energy use divided by transit bus passenger-miles.

Energy use – See Energy Use Sources, p. A-8. Data series shown in Table 5.18.

Intercity

Energy use – See Energy Use Sources, p. A-9. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, *Highway Statistics 2012*, was used to estimate the change in energy use.

School

Number of vehicles – DOT, FHWA, *Highway Statistics 2012*, Table MV-10.

Energy use – See Energy Use Sources, p. A-9. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, *Highway Statistics 2012*, was used to estimate the change in energy use.

Air

Certificated air carriers

Aircraft-miles, passenger-miles – DOT, BTS, U.S. Air Traffic Statistics Through April 2014, www.bts.gov/xml/air_traffic/src/index.xml, Washington, DC.

Load factor – Passenger-miles divided by aircraft-miles.

Energy intensities –

Btu per passenger-mile – Certificated air carrier energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-15. All of domestic fuel use and half of international fuel use was considered to be domestic use.

Note: These data differ from the data in Table 9.2 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

General aviation

Number of vehicles – DOT, FAA, *General Aviation and Air Taxi Activity Surveys - CY 2012*. 2011 Data: *Aviation Forecasts*, Tables 28 and 29, May 2014. Data series shown in Table 9.3.

Energy intensities –

Btu per passenger-mile – General aviation energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-14. Data series shown in Table 9.3.

Recreational boating

Number of vehicles and energy use – U.S. EPA, NONROAD2008a model.

Rail

Intercity

Number of vehicles, vehicle-miles, passenger-miles – AAR, *Railroad Facts, 2013 Edition*, Washington, DC, 2013.

Load factor – Passenger-miles divided by vehicle-miles.

Energy Intensities –

Btu per vehicle-mile – Intercity rail energy use divided by vehicle-miles.

Btu per passenger-mile – Intercity rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-23. Data series shown in Table 9.10.

Transit

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Sum of light and heavy rail transit. Data series shown on Table 9.12.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Light and heavy transit rail energy use divided by vehicle-miles.

Btu per passenger-mile – Light and heavy transit rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-22. Data series shown in Table 9.12.

Commuter

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Data series shown on Table 9.11.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Commuter rail energy use divided by vehicle-miles.

Btu per passenger-mile – Commuter rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-21. Data series shown in Table 9.11.

Highway Passenger Mode Energy Intensities

Cars

Btu per vehicle-mile – Car energy use divided by car vehicle miles of travel.

Energy use – See Energy Use Sources, p. A-5. Data series shown in Table 2.7.

Vehicle-miles – 1970-2008: DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996 and DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 4.1.

2009-2012: See Appendix A for Car/Light Truck Shares.

Btu per passenger-mile – Car energy use divided by car passenger-miles.

Energy use – See Energy Use Sources, p. A-5. Data series shown in Table 2.7.

Passenger miles – Vehicle miles multiplied by an average load factor.

Vehicle-miles – DOT, FHWA, *Highway Statistics 2009*, Table VM-1 and annual editions back to 1996 and DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 4.1.

Load factor – NPTS 1969, 1977, 1983/84, 1990, and 1995; NHTS 2001 and 2009. Data series shown in Table A.18.

Table A.18
Car Load Factor used to Calculate Passenger-Miles

Year	Source	Load Factor
1970	1969 NPTS	1.90
1971	Interpolated	1.90
1972	Interpolated	1.90
1973	Interpolated	1.90

2005	2001 NHTS	1.57
2006	2001 NHTS	1.57
2007	2001 NHTS	1.57
2008	2009 NHTS	1.55
2009	2009 NHTS	1.55
2010	2009 NHTS	1.55
2011	2009 NHTS	1.55
2012	2009 NHTS	1.55

Light trucks

Btu per vehicle-mile – Light truck energy use divided by light truck vehicle miles of travel.

Energy use – See Energy Use Sources, p. A-10. Data series shown in Table 2.7.

Vehicle-miles – 1970-2008: DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996 and DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 4.2. 2009-2012: See Appendix A for Car/Light Truck Shares.

Buses

Transit

Btu per vehicle-mile – Transit bus energy use divided by transit bus vehicle-miles.

Energy use – See Energy Use Sources, p. A-8. Data series shown in Table 5.18.

Vehicle-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Data series shown on Table 5.18.

Btu per passenger-mile – Transit bus energy use divided by transit bus passenger-miles.

Energy use – See Energy Use Sources, p. A-8. Data series shown in Table 5.18.

Passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Data series shown on Table 5.18.

Intercity

Btu per passenger-mile – Data are not available.

Energy use – See Energy Use Sources, p. A-9. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, *Highway Statistics 2012*, was used to estimate the change in energy use.

Passenger-miles – Data are not available.

Nonhighway Mode Energy Intensities

Air

Certificated air carriers

Btu per passenger-mile – Certificated air carrier energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-15. All of domestic fuel use and half of international fuel use was considered to be domestic use.

Passenger-miles – DOT, BTS, *Air Carrier Traffic Statistics*, Washington, DC, www.apps.bts.gov/xml/air_traffic/src/index.html. Pre-1994 data are from various editions of the *FAA Statistical Handbook of Aviation* (no longer published). Scheduled service passenger-miles of domestic air carriers and half of international air carriers were used to coincide with fuel use.

Note: These data differ from the data in Table 9.2 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

General aviation

Btu per passenger-mile – Data are not available.

Energy use – See Energy Use Sources, p. A-14. Data series shown in Table 9.3.

Passenger-miles – Data are not available.

Rail

Intercity

Btu per passenger-mile – Intercity rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-23. Data series shown in Table 9.10.

Passenger-miles – AAR, *Railroad Facts, 2013 Edition*, and previous annual editions.

Transit

Btu per passenger-mile – Transit rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-22. Data series shown in Table 9.12.

Passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Data series shown on Table 9.12.

Commuter

Btu per passenger-mile – Commuter rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-21. Data series shown in Table 9.11.

Passenger-miles – APTA, *2014 Public Transportation Fact Book*, Washington, DC, 2014. Data series shown on Table 9.11.

Freight Mode Energy Intensities

Truck

Btu per vehicle-mile – Heavy single-unit and combination truck energy use divided by vehicle miles

Energy use – See Energy Use Sources (medium/heavy trucks), p. A-12.

Vehicle-miles – DOT, FHWA, *Highway Statistics 2012*, Table VM-1 and annual editions back to 1996 and DOT, FHWA, *Highway Statistics Summary to 1995*. Data series is the total of vehicle travel data on Tables 5.1 and 5.2.

Rail

Btu per freight car-mile – Class I rail energy use divided by freight car-miles.

Energy use – See Energy Use Sources, p. A-20. Data series shown in Table 9.8.

Freight car miles – AAR, *Railroad Facts, 2013 Edition*, Washington, DC, 2013. Data series shown in Table 9.8.

Btu per ton-mile – Class I rail energy use divided by ton-miles.

Energy use – See Energy Use Sources, p. A-20. Data series shown in Table 9.8.

Ton-miles – AAR, *Railroad Facts, 2013 Edition*, Washington, DC, 2013. Data series shown in Table 9.8.

Water

Btu per ton-mile – Domestic waterborne commerce energy use on taxable waterways divided by ton-miles on taxable waterways.

Energy use – Modeled by Chrisman A. Dager, University of Tennessee, Knoxville, using Waterborne Commerce Statistics Center detail records and annual IRS reports on the Inland Waterway Trust Fund tax on diesel fuel used on the inland waterway.

Ton-miles – Based on detailed records from the U.S. Department of the Army, Army Corps of Engineers, Waterborne Commerce Statistics Center. Includes only ton-miles on taxable waterways.

Car and Light Truck Shares

In 2011, the Federal Highway Administration (FHWA) changed the methodology for producing the data on the VM-1 Table in the annual *Highway Statistics* publication. Historically, VM-1 included individual categories for passenger cars and 2-axle, 4-tire trucks. VM-1 included the vehicle miles of travel (VMT), registrations, fuel use, and fuel economy of passenger cars and 2-axle, 4-tire trucks. After the methodology change, the categories of light vehicles on VM-1 changed to Light-Duty Vehicles with Short wheelbase (less than or equal to 121 inches) and Light-Duty Vehicles with Long Wheelbase (over 121 inches). As some passenger cars have long wheelbases and some 2-axle, 4-tire trucks have short wheelbases, the categories of cars and 2-axle, 4-tire trucks are no longer available. Despite these changes, there are many transportation analysts who require information on cars and 2-axle, 4-tire trucks. Thus, a new methodology to estimate the data in these categories was developed for years 2009 through 2012.

Cars

Registrations – DOT, FHWA, *Highway Statistics 2012*, Table MV-1 and annual editions back to 2009.

Vehicle travel –

Total for all light vehicles – DOT, FHWA, *Highway Statistics 2012*, Table VM-1 and annual editions back to 2009; sum of light-duty short wheelbase and light-duty long wheelbase VMT.

Cars – Using historical shares of passenger cars/2-axle, 4-tire trucks from the *Highway Statistics*, the percent of light vehicle travel attributable to cars was estimated for 2009-2012, keeping in mind the economic conditions present in those years and the general trend in total light vehicle VMT. The estimated share was applied to total VMT as shown in Table A.19.

Table A.19
Estimated Car VMT

Year	Total Light Vehicle VMT (billions)	Share Attributable to Cars	Total Car VMT (billions)
2009	2,633.3	59.5%	1,566.8
2010	2,648.5	56.5%	1,496.4
2011	2,650.5	55.0%	1,457.8
2012	2,664.5	54.0%	1,438.8

Miles per Vehicle – Vehicle travel divided by registrations.

Fuel Use – Vehicle travel divided by fuel economy.

Fuel Economy – DOE, EIA, *Annual Energy Outlook 2014*, April 2014 and annual editions back to 2012.

2-axle, 4-tire Trucks

Registrations – DOT, FHWA, *Highway Statistics 2012*, Table MV-1 and annual editions back to 2009.

Vehicle travel –

Total for all light vehicles – DOT, FHWA, *Highway Statistics 2012*, Table VM-1 and annual editions back to 2009; sum of light-duty short wheelbase and light-duty long wheelbase VMT.

2-axle, 4-tire truck VMT – Using historical shares of passenger cars/2-axle, 4-tire trucks from the *Highway Statistics*, the percent of light vehicle travel attributable to cars was estimated for 2009-2012, keeping in mind the economic conditions present in those years and the general trend in total light vehicle VMT. The estimated share was applied to total VMT as shown in Table A.20.

Table A.20
Estimated 2-axle, 4-tire Truck VMT

Year	Total Light Vehicle VMT (billions)	Share Attributable to 2-axle, 4-tire Trucks	Total 2-axle, 4-tire Truck VMT (billions)
2009	2,633.2	40.5%	1,066.5
2010	2,648.5	43.5%	1,152.1
2011	2,650.5	45.0%	1,192.7
2012	2,664.5	46.0%	1,225.6

Miles per Vehicle – Vehicle travel divided by registrations.

Fuel Use – Vehicle travel divided by fuel economy.

Fuel Economy – DOE, EIA, *Annual Energy Outlook 2014*, April 2014 and annual editions back to 2012.

APPENDIX B

CONVERSIONS

CONVERSIONS

A Note about Heating Values

The heat content of a fuel is the quantity of energy released by burning a unit amount of that fuel. However, this value is not absolute and can vary according to several factors. For example, empirical formulae for determining the heating value of liquid fuels depend on the fuels' American Petroleum Institute (API) gravity. The API gravity varies depending on the percent by weight of the chemical constituents and impurities in the fuel, both of which are affected by the combination of raw materials used to produce the fuel and by the type of manufacturing process. Temperature and climatic conditions are also factors.

Because of these variations, the heating values in Table B.4 may differ from values in other publications. The figures in this report are representative or average values, not absolute ones. The gross (higher) heating values used here agree with those used by the Energy Information Administration (EIA).

Heating values fall into two categories, usually referred to as “higher” (or gross) and “lower” (or net). If the products of fuel combustion are cooled back to the initial fuel-air or fuel-oxidizer mixture temperature and the water formed during combustion is condensed, the energy released by the process is the higher (gross) heating value. If the products of combustion are cooled to the initial fuel-air temperature, but the water is considered to remain as a vapor, the energy released by the process is the lower (net) heating value. Usually the difference between the gross and net heating values for fuels used in transportation is around 5 to 8 percent; however, it is important to be consistent in their use.

Table B.1
Hydrogen Heat Content

1 kilogram hydrogen =	
Higher heating value	Lower heating value
134,200 Btu	113,400 Btu
39.3 kWhr	33.2 kWhr
141,600 kJ	119,600 kJ
33,800 kCal	28,560 kCal

Table B.2
Hydrogen Conversions

	Weight		Gas		Liquid	
	Pounds (lb)	Kilograms (kg)	Standard cubic feet (SCF)	Normal cubic meter (Nm ³)	Gallons (gal)	Liters (L)

^a For gasoline-fueled vehicles.

Table B.14
SI Prefixes and Their Values

	Value	Prefix	Symbol
One million million millionth	10^{-18}	atto	a
One thousand million millionth	10^{-15}	femto	f
One million millionth	10^{-12}	pico	p
One thousand millionth	10^{-9}	nano	n
One millionth	10^{-6}	micro	μ
One thousandth	10^{-3}	milli	m
One hundredth	10^{-2}	centi	c
One tenth	10^{-1}	deci	
One	10^0		
Ten	10^1	deca	
One hundred	10^2	hecto	
One thousand	10^3	kilo	k
One million	10^6	mega	M
One billion ^a	10^9	giga	G
One trillion ^a	10^{12}	tera	T
One quadrillion ^a	10^{15}	peta	P
One quintillion ^a	10^{18}	exa	E

^a Care should be exercised in the use of this nomenclature, especially in foreign correspondence, as it is either unknown or carries a different value in other countries. A "billion," for example, signifies a value of 10^{12} in most other countries.

Table B.15
Metric Units and Abbreviations

Quantity	Unit name	Symbol
Energy	joule	J
Specific energy	joule/kilogram	J/kg
Specific energy consumption	joule/kilogram•kilometer	J/(kg•km)
Energy consumption	joule/kilometer	J/km
Energy economy	kilometer/kilojoule	km/kJ
Power	kilowatt	kW
Specific power	watt/kilogram	W/kg
Power density	watt/meter ³	W/m ³
Speed	kilometer/hour	km/h
Acceleration	meter/second ²	m/s ²
Range (distance)	kilometer	km
Weight	kilogram	kg
Torque	newton•meter	N•m
Volume	meter ³	m ³
Mass; payload	kilogram	kg
Length; width	meter	m
Brake specific fuel consumption	kilogram/joule	kg/J
Fuel economy (heat engine)	liters/100 km	L/100 km

Table B.16
Carbon Coefficients, 2002
(Million metric tons carbon per quadrillion Btu)

Fuel Type	
Coal	
Coal (residential)	26.04
Coal (commercial)	26.04
Coal (industrial coking)	25.63
Coal (industrial other)	25.74
Coal (electric utility)	25.98
Natural gas	
Natural gas (pipeline)	14.47
Natural gas (flared)	14.92
Petroleum	
Asphalt and road oil	20.62
Aviation gasoline	18.87
Crude oil	20.30
Distillate fuel	19.95
Jet fuel	19.33
Kerosene	19.72
LPG	16.99
Lubricants	20.24
Motor gasoline	19.34
Petrochemical feed	19.37
Petroleum coke	27.85
Residual fuel	21.49
Waxes	19.81

Note: All coefficients based on Higher Heating (Gross Calorific) Value and assume 100 percent combustion.

Conversion of Constant Dollar Values

Many types of information in this data book are expressed in dollars. Generally, constant dollars are used—that is, dollars of a fixed value for a specific year, such as 2010 dollars. Converting current dollars to constant dollars, or converting constant dollars for one year to constant dollars for another year, requires conversion factors (Table B.17 and Table B.18). Table B.17 shows conversion factors for the Consumer Price Index inflation factors. Table B.18 shows conversion factors using the Gross National Product inflation factors.

Table B.17
Consumer Price Inflation (CPI) Index

From:	1970	1971	1972	1973	1974	1975	1976	1977	1978	1979

Figure C.3. Map of Places where Reformulated Gasoline is Sold

Source:

U.S. Environmental Protection Agency, www.epa.gov/otaq/fuels/gasolinefuels/rfg/areas.htm.

Note: Reformulated gasoline is a motor gasoline specially formulated to achieve significant reductions in vehicle emissions of ozone-forming and toxic air pollutants. The Clean Air Act of 1990 mandates reformulated gasoline use in areas with ozone-air pollution problems.

GLOSSARY

Acceleration power – Measured in kilowatts. Pulse power obtainable from a battery used to accelerate a vehicle. This is based on a constant current pulse for 30 seconds at no less than 2/3 of the maximum open-circuit-voltage, at 80% depth-of-discharge relative to the battery's rated capacity and at 20° C ambient temperature.

Air Carrier – The commercial system of air transportation consisting of certificated air carriers, air taxis (including commuters), supplemental air carriers, commercial operators of large aircraft, and air travel clubs.

Certificated route air carrier: An air carrier holding a Certificate of Public Convenience and Necessity issued by the Department of Transportation to conduct scheduled interstate services. Nonscheduled or charter operations may also be conducted by these carriers. These carriers operate large aircraft (30 seats or more, or a maximum payload capacity of 7,500 pounds or more) in accordance with Federal Aviation Regulation part 121.

Domestic air operator: Commercial air transportation within and between the 50 States and the District of Columbia. Includes operations of certificated route air carriers, Pan American, local service, helicopter, intra-Alaska, intra-Hawaii, all-cargo carriers and other carriers. Also included are transborder operations conducted on the domestic route segments of U.S. air carriers. Domestic operators are classified based on their operating revenue as follows:

- Majors - over \$1 billion
- Nationals - \$100-1,000 million
- Large Regionals - \$10-99.9 million
- Medium Regionals - \$0-9.99 million

International air operator: Commercial air transportation outside the territory of the United States, including operations between the U.S. and foreign countries and between the U.S. and its territories and possessions.

Supplemental air carrier: A class of air carriers which hold certificates authorizing them to perform passenger and cargo charter services supplementing the scheduled service of the certificated route air carriers. Supplemental air carriers are often referred to as nonscheduled air carriers or "nonskeds."

Alcohol – The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Alternative fuel – For transportation applications, includes the following: methanol; denatured ethanol, and other alcohols; fuel mixtures containing 85 percent or more by volume of methanol, denatured ethanol, and other alcohols with gasoline or other fuels; natural gas; liquefied petroleum gas (propane); hydrogen; coal-derived liquid fuels; fuels (other than alcohol) derived from biological materials (biofuels such as soy diesel fuel); and electricity (including electricity from solar energy). The term "alternative fuel" does not include alcohol or other blended portions of primarily petroleum-based fuels used as oxygenates or extenders, i.e. MTBE, ETBE, other ethers, and the 10-percent ethanol portion of gasohol.

Amtrak – See Rail.

Anthropogenic – Human made. Usually used in the context of emissions that are produced as the result of human activities.

Aviation – See *General aviation*.

Aviation gasoline – All special grades of gasoline for use in aviation reciprocating engines, as given in the American Society for Testing and Materials (ASTM) Specification D 910. Includes all refinery products within the gasoline range that are to be marketed straight or in blends as aviation gasoline without further processing (any refinery operation except mechanical blending). Also included are finished components in the gasoline range which will be used for blending or compounding into aviation gasoline.

Barges – Shallow, nonself-propelled vessels used to carry bulk commodities on the rivers and the Great Lakes.

Battery efficiency – Measured in percentage. Net DC energy delivered on discharge, as a percentage of the total DC energy required to restore the initial state-of-charge. The efficiency value must include energy losses resulting from self-discharge, cell equalization, thermal loss compensation, and all battery-specific auxiliary equipment.

Btu – British thermal unit. The amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit at or near 39.2 degrees Fahrenheit. An average Btu content of fuel is the heat value per quantity of fuel as determined from tests of fuel samples.

Bunker – A storage tank.

Bunkering fuels – Fuels stored in ship bunkers.

Bus – A mode of transit service characterized by roadway vehicles powered by diesel, gasoline, battery, or alternative fuel engines contained within the vehicle.

Intercity bus: A standard size bus equipped with front doors only, high backed seats, luggage compartments separate from the passenger compartment and usually with restroom facilities, for high-speed long distance service.

Motor bus: Rubber-tired, self-propelled, manually-steered bus with fuel supply on board the vehicle. Motor bus types include intercity, school, and transit.

School and other nonrevenue bus: Bus services for which passengers are not directly charged for transportation, either on a per passenger or per vehicle basis.

Transit bus: A bus designed for frequent stop service with front and center doors, normally with a rear-mounted diesel engine, low-back seating, and without luggage storage compartments or restroom facilities.

Trolley coach: Rubber-tired electric transit vehicle, manually-steered, propelled by a motor drawing current, normally through overhead wires, from a central power source not on board the vehicle.

Calendar year – The period of time between January 1 and December 31 of any given year.

Captive imports – Products produced overseas specifically for domestic manufacturers.

Car size classifications – Size classifications of cars are established by the Environmental Protection Agency (EPA) as follows:

Minicompact – less than 85 cubic feet of passenger and luggage volume.

Subcompact – between 85 to 100 cubic feet of passenger and luggage volume.

Compact – between 100 to 110 cubic feet of passenger and luggage volume.

Midsize – between 110 to 120 cubic feet of passenger and luggage volume.

Large – more than 120 cubic feet of passenger and luggage volume.

Two seater – cars designed primarily to seat only two adults.

Station wagons are included with the size class for the sedan of the same name.

Carbon dioxide (CO₂) – A colorless, odorless, non-poisonous gas that is a normal part of the ambient air. Carbon dioxide is a product of fossil fuel combustion.

Carbon monoxide (CO) – A colorless, odorless, highly toxic gas that is a by-product of incomplete fossil fuel combustion. Carbon monoxide, one of the major air pollutants, can be harmful in small amounts if breathed over a certain period of time.

Car-mile (railroad) – A single railroad car moved a distance of one mile.

Cargo ton-mile – See *Ton-mile*.

Certificated route air carriers – See *Air carriers*.

Class I freight railroad – See *Rail*.

Coal slurry – Finely crushed coal mixed with sufficient water to form a fluid.

Combination trucks – Consist of a power unit (a truck tractor) and one or more trailing units (a semi-trailer or trailer). The most frequently used combination is popularly referred to as a "tractor-semitrailer" or "tractor trailer".

Commercial sector – An energy-consuming sector that consists of service-providing facilities of: businesses; Federal, State, and local governments; and other private and public organizations, such as religious, social or fraternal groups. Includes institutional living quarters.

Commuter rail – A mode of transit service (also called metropolitan rail, regional rail, or suburban rail) characterized by an electric or diesel propelled railway for urban passenger train service consisting of local short distance travel operating between a central city and adjacent suburbs.

Compact car – See *car size classifications*.

Compression ignition – The form of ignition that initiates combustion in a diesel engine. The rapid compression of air within the cylinders generates the heat required to ignite the fuel as it is injected.

Constant dollars – A time series of monetary figures is expressed in constant dollars when the effect of change over time in the purchasing power of the dollar has been removed. Usually the data are expressed in terms of dollars of a selected year or the average of a set of years.

Consumer Price Index (CPI) – A measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services.

Continuous discharge capacity – Measured as percent of rated energy capacity. Energy delivered in a constant power discharge required by an electric vehicle for hill climbing and/or high-speed cruise, specified as the percent of its rated energy capacity delivered in a one hour constant-power discharge.

Conventional Refueling Station – An establishment for refueling motor vehicles with traditional transportation fuels, such as gasoline and diesel fuel.

Corporate Average Fuel Economy (CAFE) Standards – CAFE standards were originally established by Congress for new cars, and later for light trucks, in Title V of the Motor Vehicle Information and Cost Savings Act (15 U.S.C.1901, et seq.) with subsequent amendments. Under CAFE, car manufacturers are required by law to produce vehicle fleets with a composite sales-weighted fuel economy which cannot be lower than the CAFE standards in a given year, or for every vehicle which does not meet the standard, a fine of \$5.00 is paid for every one-tenth of a mpg below the standard.

Criteria pollutant – A pollutant determined to be hazardous to human health and regulated under EPA's National Ambient Air Quality Standards. The 1970 amendments to the Clean Air Act require EPA to describe the health and welfare impacts of a pollutant as the "criteria" for inclusion in the regulatory regime.

Crude oil – A mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Crude oil imports – The volume of crude oil imported into the 50 States and the District of Columbia, including imports from U.S. territories, but excluding imports of crude oil into the Hawaiian Foreign Trade Zone.

Curb weight – The weight of a vehicle including all standard equipment, spare tire and wheel, all fluids and lubricants to capacity, full tank of fuel, and the weight of major optional accessories normally found on the vehicle.

Current dollars – Represents dollars current at the time designated or at the time of the transaction. In most contexts, the same meaning would be conveyed by the use of the term "dollars." See also constant dollars.

Demand Response – A transit mode that includes passenger cars, vans, and small buses operating in response to calls from passengers to the transit operator who dispatches the vehicles. The vehicles do not operate over a fixed route on a fixed schedule. Can also be known as paratransit or dial-a-ride.

Diesel fuel – See *Distillate fuel oil*.

Disposable personal income – See *Income*.

Distillate fuel oil – The lighter fuel oils distilled off during the refining process. Included are products known as ASTM grades numbers 1 and 2 heating oils, diesel fuels, and number 4 fuel oil. The major uses of distillate fuel oils include heating, fuel for on-and off-highway diesel engines, and railroad diesel fuel.

Domestic air operator – See *Air carrier*.

Domestic water transportation – See *Internal water transportation*.

E85 – 85% ethanol and 15% gasoline.

E95 – 95% ethanol and 5% gasoline.

Electric utilities sector – Consists of privately and publicly owned establishments which generate electricity primarily for resale.

Emission standards – Limits or ranges established for pollution levels emitted by vehicles as well as stationary sources. The first standards were established under the 1963 Clean Air Act.

End-use sector – See *Sector*.

Energy capacity – Measured in kilowatt hours. The energy delivered by the battery, when tested at C/3 discharge rate, up to termination of discharge specified by the battery manufacturer. The required acceleration power must be delivered by the battery at any point up to 80% of the battery's energy capacity rating.

Energy efficiency – In reference to transportation, the inverse of energy intensiveness: the ratio of outputs from a process to the energy inputs; for example, miles traveled per gallon of fuel (mpg).

Energy intensity – In reference to transportation, the ratio of energy inputs to a process to the useful outputs from that process; for example, gallons of fuel per passenger-mile or Btu per ton-mile.

Ethanol (C₂H₅OH) – Otherwise known as ethyl alcohol, alcohol, or grain-spirit. A clear, colorless, flammable oxygenated hydrocarbon with a boiling point of 78.5 degrees Celsius in the anhydrous state. In transportation, ethanol is used as a vehicle fuel by itself (E100 – 100% ethanol by volume), blended with gasoline (E85 – 85% ethanol by volume), or as a gasoline octane enhancer and oxygenate (10% by volume).

Excise tax – Paid when purchases are made on a specific good, such as gasoline. Excise taxes are often included in the price of the product. There are also excise taxes on activities, such as highway usage by trucks.

Ferry boat – A transit mode comprising vessels carrying passengers and in some cases vehicles over a body of water, and that are generally steam or diesel-powered.

Fixed operating cost – See *Operating cost*.

Fleet vehicles –

Private fleet vehicles: Ideally, a vehicle could be classified as a member of a fleet if it is:

- a) operated in mass by a corporation or institution,
- b) operated under unified control, or
- c) used for non-personal activities.

However, the definition of a fleet is not consistent throughout the fleet industry. Some companies make a distinction between cars that were bought in bulk rather than singularly, or whether they are operated in bulk, as well as the minimum number of vehicles that constitute a fleet (i.e. 4 or 10).

Government fleet vehicles: Includes vehicles owned by all Federal, state, county, city, and metro units of government, including toll road operations.

Foreign freight – Movements between the United States and foreign countries and between Puerto Rico, the Virgin Islands, and foreign countries. Trade between U.S. territories and possessions (e.g. Guam, Wake, American Samoa) and foreign countries is excluded. Traffic to or from the Panama Canal Zone is included.

Gas Guzzler Tax – Originates from the 1978 Energy Tax Act (Public Law 95-618). A new car purchaser is required to pay the tax if the car purchased has a combined city/highway fuel economy rating that is below the standard for that year. For model years 1986 and later, the standard is 22.5 mpg.

Gasohol – A mixture of 10% anhydrous ethanol and 90% gasoline by volume; 7.5% anhydrous ethanol and 92.5% gasoline by volume; or 5.5% anhydrous ethanol and 94.5% gasoline by volume. There are other fuels that contain methanol and gasoline, but these fuels are not referred to as gasohol.

Gasoline – See *Motor gasoline*.

General aviation – That portion of civil aviation which encompasses all facets of aviation except air carriers. It includes any air taxis, commuter air carriers, and air travel clubs which do not hold Certificates of Public Convenience and Necessity.

Global warming potential (GWP) – An index used to compare the relative radiative forcing of different gases without directly calculating the changes in atmospheric concentrations. GWPs are calculated as the ratio of the radiative forcing that would result from the emission of one kilogram of a greenhouse gas to that from the emission of one kilogram of carbon dioxide over a fixed period of time, such as 100 years.

Greenhouse gases – Those gases, such as water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulfur hexafluoride, that are transparent to solar (short-wave) radiation but opaque to long-wave (infrared) radiation, thus preventing long-wave radiant energy from leaving Earth's atmosphere. The net effect is a trapping of absorbed radiation and a tendency to warm the planet's surface.

Gross National Product – A measure of monetary value of the goods and services becoming available to the nation from economic activity. Total value at market prices of all goods and services produced by the nation's economy. Calculated quarterly by the Department of Commerce, the Gross National Product is the broadest available measure of the level of economic activity.

Gross vehicle weight (gvw) – The weight of the empty truck plus the maximum anticipated load weight.

Gross vehicle weight rating (gvwr) – The gross vehicle weight which is assigned to each new truck by the manufacturer. This rating may be different for trucks of the same model because of certain features, such as heavy-duty suspension. Passenger cars do not have gross vehicle weight ratings.

Heavy-heavy truck – See *Truck size classifications*.

Heavy rail – A mode of transit service (also called metro, subway, rapid transit, or rapid rail) operating on an electric railway with the capacity for a heavy volume of traffic. Characterized by high speed and rapid acceleration of passenger rail cars.

Household – Consists of all persons who occupy a housing unit, including the related family members and all unrelated persons, if any, who share the housing unit.

Housing unit – A house, apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hallway intended to be used by the occupants of another unit or by the general public, or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

Hybrid-electric vehicles – Combines the benefits of gasoline engines and electric motors and can be configured to obtain different objectives, such as improved fuel economy, increased power, or additional auxiliary power for electronic devices and power tools.

Hydrocarbon (HC) – A compound that contains only hydrogen and carbon. The simplest and lightest forms of hydrocarbon are gaseous. With greater molecular weights they are liquid, while the heaviest are solids.

Income –

Disposable personal income: Personal income less personal tax and non-tax payments.

National income: The aggregate earnings of labor and property which arise in the current production of goods and services by the nation's economy.

Personal income: The current income received by persons from all sources, net of contributions for social insurance.

Industrial sector – Construction, manufacturing, agricultural and mining establishments.

Inertia weight – The curb weight of a vehicle plus 300 pounds.

Intercity bus – See *Bus*.

Intermodal – Transportation activities involving more than one mode of transportation, including transportation connections and coordination of various modes.

Internal water transportation – Includes all local (intraport) traffic and traffic between ports or landings wherein the entire movement takes place on inland waterways. Also termed internal are movements involving carriage on both inland waterways and the water of the Great Lakes, and inland movements that cross short stretches of open water that link inland systems.

International air operator – See *Air carrier*.

International freight – See *Foreign freight*.

Jet fuel – Includes both naphtha-type and kerosene-type fuels meeting standards for use in aircraft turbine engines. Although most jet fuel is used in aircraft, some is used for other purposes such as generating electricity in gas turbines.

Kerosene-type jet fuel: A quality kerosene product with an average gravity of 40.7 degrees API and 10% to 90% distillation temperatures of 217 to 261 degrees centigrade. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. It is a relatively low freezing point distillate of the kerosene type.

Naphtha-type jet fuel: A fuel in the heavy naphtha boiling range with an average gravity of 52.8 degrees API and 10% to 90% distillation temperatures of 117 to 233 degrees centigrade used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum.

Kerosene – A petroleum distillate in the 300 to 500 degrees Fahrenheit boiling range and generally having a flash point higher than 100 degrees Fahrenheit by the American Society of Testing and Material (ASTM) Method D56, a gravity range from 40 to 46 degrees API, and a burning point in the range of 150 to 175 degrees Fahrenheit. It is a clean-burning product suitable for use as an illuminant when burned in wick lamps. Includes grades of kerosene called range oil having properties similar to Number 1 fuel oil, but with a gravity of about 43 degrees API and an end point of 625 degrees Fahrenheit. Used in space heaters, cooking stoves, and water heaters.

Kerosene-type jet fuel – See Jet fuel.

Large car – See *Car size classifications*.

Lease Condensate – A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Light duty vehicles – Cars and light trucks combined.

Light truck – Unless otherwise noted, light trucks are defined in this publication as two-axle, four-tire trucks. The U.S. Bureau of Census classifies all trucks with a gross vehicle weight less than 10,000 pounds as light trucks (See Truck size classifications).

Light-heavy truck – See *Truck size classifications*.

Light rail – Mode of transit service (also called streetcar, tramway or trolley) operating passenger rail cars singly (or in short, usually two-car or three-car trains) on fixed rails in right-of-way that is often separated from other traffic for part or much of the way.

Liquefied petroleum gas (lpg) – Consists of propane and butane and is usually derived from natural gas. In locations where there is no natural gas and the gasoline consumption is low, naphtha is converted to lpg by catalytic reforming.

Load factor – Total passenger miles divided by total vehicle miles.

Low emission vehicle – Any vehicle certified to the low emission standards which are set by the Federal government and/or the state of California.

M85 – 85% methanol and 15% gasoline.

M100 – 100% methanol.

Medium truck – See *Truck size classifications*.

Methanol (CH₃OH) – A colorless highly toxic liquid with essentially no odor and very little taste. It is the simplest alcohol and boils at 64.7 degrees Celsius. In transportation, methanol is used as a vehicle fuel by itself (M100), or blended with gasoline (M85).

Midsized car – See *Car size classifications*.

Minicompact car – See *Car size classifications*.

Model year – In this publication, model year is referring to the "sales" model year, the period from October 1 to the next September 31.

Motor bus – See *Bus*.

Motor gasoline – A mixture of volatile hydrocarbons suitable for operation of an internal combustion engine whose major components are hydrocarbons with boiling points ranging from 78 to 217 degrees centigrade and whose source is distillation of petroleum and cracking, polymerization, and other chemical reactions by which the naturally occurring petroleum hydrocarbons are converted into those that have superior fuel properties.

Regular gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88. Note: Octane requirements may vary by altitude.

Midgrade gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 88 and less than or equal to 90. Note: Octane requirements may vary by altitude.

Premium gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than 90. Note: Octane requirements may vary by altitude.

Reformulated gasoline: Finished motor gasoline formulated for use in motor vehicles, the composition and properties of which meet the requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under Section 211(k) of the Clean Air Act. For more details on this clean fuel program see <http://www.epa.gov/otaq/fuels/gasolinefuels/rfg/index.htm>. Note: This category includes oxygenated fuels program reformulated gasoline (OPRG) but excludes reformulated gasoline blendstock for oxygenate blending (RBOB).

MTBE – Methyl Tertiary Butyl Ether—a colorless, flammable, liquid oxygenated hydrocarbon containing 18.15 percent oxygen.

Naphtha-type jet fuel – See *Jet fuel*.

National income – See *Income*.

Nationwide Personal Transportation Survey (NPTS) – A nationwide survey of households that provides information on the characteristics and personal travel patterns of the U.S. population. Surveys were conducted in 1969, 1977, 1983, 1990, and 1995 by the U.S. Bureau of Census for the U.S. Department of Transportation.

Natural gas – A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.

Natural gas, dry: Natural gas which remains after: 1) the liquefiable hydrocarbon portion has been removed from the gas stream; and 2) any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable. Dry natural gas is also known as consumer-grade natural gas. The parameters for measurement are cubic feet at 60 degrees Fahrenheit and 14.73 pounds per square inch absolute.

Natural gas, wet: The volume of natural gas remaining after removal of lease condensate in lease and/or field separation facilities, if any, and after exclusion of nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Natural gas liquids may be recovered from volumes of natural gas, wet after lease separation, at natural gas processing plants.

Natural gas plant liquids: Natural gas liquids recovered from natural gas in processing plants and from natural gas field facilities and fractionators. Products obtained include ethane, propane, normal butane, isobutane, pentanes plus, and other products from natural gas processing plants.

Nitrogen oxides (NO_x) – A product of combustion of fossil fuels whose production increases with the temperature of the process. It can become an air pollutant if concentrations are excessive.

Nonattainment area – Any area that does not meet the national primary or secondary ambient air quality standard established by the Environmental Protection Agency for designated pollutants, such as carbon monoxide and ozone.

Oil Stocks – Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products.

Operating cost –

Fixed operating cost: In reference to passenger car operating cost, refers to those expenditures that are independent of the amount of use of the car, such as insurance costs, fees for license and registration, depreciation and finance charges.

Variable operating cost: In reference to passenger car operating cost, expenditures which are dependent on the amount of use of the car, such as the cost of gas and oil, tires, and other maintenance.

Organization for Economic Cooperation and Development (OECD) – Consists of Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, Mexico, Poland, and South Korea which are not yet available.

OECD Europe: Consists of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

OECD Pacific: Consists of Australia, Japan, and New Zealand.

Organization for Petroleum Exporting Countries (OPEC) – Includes Saudi Arabia, Iran, Venezuela, Libya, Indonesia, United Arab Emirates, Algeria, Nigeria, Ecuador, Gabon, Iraq, Kuwait, and Qatar. Data for Saudi Arabia and Kuwait include their shares from the Partitioned Zone (formerly the Neutral Zone). Angola joined OPEC in December 2006, thus, beginning in 2007, data on OPEC will include Angola.

Arab OPEC – Consists of Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Other single-unit truck – See *Single-unit truck*.

Oxygenate – A substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. Includes fuel ethanol, methanol, and methyl tertiary butyl ether (MTBE).

Paratransit – Mode of transit service (also called demand response or dial-a-ride) characterized by the use of passenger cars, vans or small buses operating in response to calls from passengers or their agents to the transit operator, who then dispatches a vehicle to pick up the passengers and transport them to their destinations.

Particulates – Carbon particles formed by partial oxidation and reduction of the hydrocarbon fuel. Also included are trace quantities of metal oxides and nitrides, originating from engine wear, component degradation, and inorganic fuel additives. In the transportation sector, particulates are emitted mainly from diesel engines.

Passenger-miles traveled (PMT) – One person traveling the distance of one mile. Total passenger-miles traveled, thus, give the total mileage traveled by all persons.

Passenger rail – See *Rail*, "*Amtrak*" and "*Transit Railroad*".

Persian Gulf countries – Consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Emirates.

Personal Consumption Expenditures (PCE) – As used in the national accounts, the market value of purchases of goods and services by individuals and nonprofit institutions and the value of food, clothing, housing, and financial services received by them as income in kind. It includes the rental value of owner-occupied houses but excludes purchases of dwellings, which are classified as capital goods (investment).

Personal income – See *Income*.

Petroleum – A generic term applied to oil and oil products in all forms, such as crude oil, lease condensate, unfinished oil, refined petroleum products, natural gas plant liquids, and non-hydrocarbon compounds blended into finished petroleum products.

Petroleum consumption: A calculated demand for petroleum products obtained by summing domestic production, imports of crude petroleum and natural gas liquids, imports of petroleum products, and the primary stocks at the beginning of the period and then subtracting the exports and the primary stocks at the end of the period.

Petroleum exports: Shipments of petroleum products from the 50 States and the District of Columbia to foreign countries, Puerto Rico, the Virgin Islands, and other U.S. possessions and territories.

Petroleum imports: All imports of crude petroleum, natural gas liquids, and petroleum products from foreign countries and receipts from Guam, Puerto Rico, the Virgin Islands, and the Hawaiian Trade Zone. The commodities included are crude oil, unfinished oils, plant condensate, and refined petroleum products.

Petroleum inventories: The amounts of crude oil, unfinished oil, petroleum products, and natural gas liquids held at refineries, at natural gas processing plants, in pipelines, at bulk terminals operated by refining and pipeline companies, and at independent bulk terminals. Crude oil held in storage on leases is also included; these stocks are known as primary stocks.

Secondary stocks—those held by jobbers dealers, service station operators, and consumers—are excluded. Prior to 1975, stock held at independent bulk terminals were classified as secondary stocks.

Petroleum products supplied: For each petroleum product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Plug-in hybrid-electric vehicles (PHEVs) — Hybrid-electric vehicles with high capacity batteries that can be charged by plugging them into an electrical outlet or charging station. There are two basic PHEV configurations:

Parallel or Blended PHEV: Both the engine and electric motor are mechanically connected to the wheels, and both propel the vehicle under most driving conditions. Electric-only operation usually occurs only at low speeds.

Series PHEVs, also called Extended Range Electric Vehicles (EREVs): Only the electric motor turns the wheels; the gasoline engine is only used to generate electricity. Series PHEVs can run solely on electricity until the battery needs to be recharged. The gasoline engine will then generate the electricity needed to power the electric motor. For shorter trips, these vehicles might use no gasoline at all.

Processing Gain – The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss – The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Proved Reserves of Crude Oil – The estimated quantities of all liquids defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Quad – Quadrillion, 10^{15} . In this publication, a Quad refers to Quadrillion Btu.

Rail –

Amtrak (American Railroad Tracks): Operated by the National Railroad Passenger Corporation of Washington, DC. This rail system was created by President Nixon in 1970, and was given the responsibility for the operation of intercity, as distinct from suburban, passenger trains between points designated by the Secretary of Transportation.

Class I freight railroad: Defined by the Interstate Commerce Commission each year based on annual operating revenue. A railroad is dropped from the Class I list if it fails to meet the annual earnings threshold for three consecutive years.

Commuter railroad: Those portions of mainline railroad (not electric railway) transportation operations which encompass urban passenger train service for local travel between a central city and adjacent suburbs. Commuter railroad service—using both locomotive-hauled and self-propelled railroad passenger cars—is characterized by multi-trip tickets, specific station-to-station fares, and usually only one or two stations in the central business district. Also known as suburban railroad.

Transit railroad: Includes "heavy" and "light" transit rail. **Heavy transit rail** is characterized by exclusive rights-of-way, multi-car trains, high speed rapid acceleration, sophisticated signaling, and high platform loading. Also known as subway, elevated railway, or metropolitan railway (metro). **Light transit rail** may be on exclusive or shared rights-of-way, high or low platform loading, multi-car trains or single cars, automated or manually operated. In generic usage, light rail includes streetcars, trolley cars, and tramways.

Refiner sales price – Sales from the refinery made directly to ultimate consumers, including bulk consumers (such as agriculture, industry, and electric utilities) and residential and commercial consumers.

Reformulated gasoline (RFG) – See *Motor gasoline*.

RFG area – An ozone nonattainment area designated by the Environmental Protection Agency which requires the use of reformulated gasoline.

Residential sector – An energy consuming sector that consists of living quarters for private households. Excludes institutional living quarters.

Residential Transportation Energy Consumption Survey (RTECS) – This survey was designed by the Energy Information Administration of the Department of Energy to provide information on how energy is used by households for personal vehicles. It has been conducted five times since 1979, the most recent being 1991.

Residual fuel oil – The heavier oils that remain after the distillate fuel oils and lighter hydrocarbons are boiled off in refinery operations. Included are products known as ASTM grade numbers 5 and 6 oil, heavy diesel oil, Navy Special Fuel Oil, Bunker C oil, and acid sludge and pitch used as refinery fuels. Residual fuel oil is used for the production of electric power, for heating, and for various industrial purposes.

Rural – Usually refers to areas with population less than 5,000.

Sales period – October 1 of the previous year to September 30 of the given year. Approximately the same as a model year.

Sales-weighted miles per gallon (mpg) – Calculation of a composite vehicle fuel economy based on the distribution of vehicle sales.

Scrapage rate – As applied to motor vehicles, it is usually expressed as the percentage of vehicles of a certain type in a given age class that are retired from use (lacking registration) in a given year.

School and other nonrevenue bus – See *Bus*.

Sector – A group of major energy-consuming components of U.S. society developed to measure and analyze energy use. The sectors most commonly referred to are: residential, commercial, industrial, transportation, and electric power.

Single-unit truck – Includes two-axle, four-tire trucks and other single-unit trucks.

Two-axle, four-tire truck: A motor vehicle consisting primarily of a single motorized device with two axles and four tires.

Other single-unit truck: A motor vehicle consisting primarily of a single motorized device with more than two axles or more than four tires.

Spark ignition engine – An internal combustion engine in which the charge is ignited electrically (e.g., with a spark plug).

Special fuels – Consist primarily of diesel fuel with small amount of liquified petroleum gas, as defined by the Federal Highway Administration.

Specific acceleration power – Measured in watts per kilogram. Acceleration power divided by the battery system weight. Weight must include the total battery system.

Specific energy – Measured in watt hours per kilogram. The rated energy capacity of the battery divided by the total battery system weight.

Subcompact car – See *Car size classifications*.

Supplemental air carrier – See *Air carrier*.

Survival rate – As applied to motor vehicles, it is usually expressed as the percentage of vehicles of a certain type in a given age class that will be in use at the end of a given year.

Tax incentives – In general, a means of employing the tax code to stimulate investment in or development of a socially desirable economic objective without direct expenditure from the budget of a given unit of government. Such incentives can take the form of tax exemptions or credits.

Test weight – The weight setting at which a vehicle is tested on a dynamometer by the U.S. Environmental Protection Agency (EPA). This weight is determined by the EPA using the inertia weight of the vehicle.

Ton-mile – The movement of one ton of freight the distance of one mile. Ton-miles are computed by multiplying the weight in tons of each shipment transported by the distance hauled.

Transmission types –

- A3 – Automatic three speed
- A4 – Automatic four speed
- A5 – Automatic five speed
- L4 – Automatic lockup four speed
- M5 – Manual five speed

Transit bus – See *Bus*.

Transit railroad – See *Rail*.

Transportation sector – Consists of both private and public passenger and freight transportation, as well as government transportation, including military operations.

Truck Inventory and Use Survey (TIUS) – Survey designed to collect data on the characteristics and operational use of the nation's truck population. It is conducted every five years by the U.S. Bureau of the Census. Surveys were conducted in 1963, 1967, 1972, 1977, 1982, 1987, and 1992. For the 1997 survey, it was renamed the Vehicle Inventory and Use Survey in anticipation

of including additional vehicle types. However, no additional vehicle types were added to the 1997 survey.

Trolleybus – Mode of transit service (also called transit coach) using vehicles propelled by a motor drawing current from overhead wires via connecting poles called a trolley pole, from a central power source not onboard the vehicle.

Truck size classifications – U.S. Bureau of the Census has categorized trucks by gross vehicle weight (gvw) as follows:

Light – Less than 10,000 pounds gvw (Also see Light Truck.)

Medium – 10,001 to 20,000 pounds gvw

Light-heavy – 20,001 to 26,000 pounds gvw

Heavy-heavy – 26,001 pounds gvw or more.

Two-axle, four-tire truck – See *Single-unit truck*.

Two seater car – See *Car size classifications*.

Ultra-low emission vehicle – Any vehicle certified to the ultra-low emission standards which are set by the Federal government and/or the state of California.

Urban – Usually refers to areas with population of 5,000 or greater.

Vanpool: A ridesharing prearrangement using vans or small buses providing round-trip transportation between the participants' prearranged boarding points and a common and regular destination.

Variable operating cost – See *Operating cost*.

Vehicle Inventory and Use Survey – See *Truck Inventory and Use Survey*.

Vehicle-miles traveled (vmt) – One vehicle traveling the distance of one mile. Total vehicle miles, thus, is the total mileage traveled by all vehicles.

Volatile organic compounds (VOCs) – Organic compounds that participate in atmospheric photochemical reactions.

Waterborne Commerce –

Coastwise: Domestic traffic receiving a carriage over the ocean, or the Gulf of Mexico. Traffic between Great Lakes ports and seacoast ports, when having a carriage over the ocean, is also termed Coastwise.

Domestic: Includes coastwise, lakewise, and internal waterborne movements.

Foreign: Waterborne import, export, and in-transit traffic between the United States, Puerto Rico and the Virgin Islands and any foreign country.

Internal: Vessel movements (origin and destination) which take place solely on inland waterways. An inland waterway is one geographically located within the boundaries of the contiguous 48 states or within the boundaries of the State of Alaska.

Lakewise: Waterborne traffic between the United States ports on the Great Lakes System. The Great Lakes System is treated as a separate waterway system rather than as a part of the inland waterway system. In comparing historical data for the Great Lakes System, one should note that prior to calendar year 1990, marine products, sand and gravel being moved from the Great Lakes to Great Lake destinations were classified as local traffic. From 1990-on, these activities are classified as lakewise traffic.

Well-to-wheel – A life cycle analysis used in transportation to consider the entire energy cycle for a given mode, rather than just tailpipe emissions. The analysis starts at the oil well and ends with the turning wheels of the vehicle.

Zero-emission vehicle – Any vehicle certified to the zero emission standards which are set by the Federal government and/or the state of California. These standards apply to the vehicle emissions only.

TITLE INDEX

Acquisitions	
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2012	7–6
Advanced	
Alternative Fuel and Advanced Technology Vehicles and Characteristics	6–1
Federal and State Advanced Technology Incentives, 2014	10–13
Age	
Cars in Operation by Age, 1970, 2001, and 2013	3–12
Trucks in Operation by Age, 1970, 2001, and 2013	3–13
U.S. Average Vehicle Age, 1995–2013	3–14
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8–16
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8–18
Agency	
Federal Government Vehicles by Agency, FY 2012	7–7
Air	
Air Conditioning (SC03) Driving Cycle	4–33
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2013	9–3
Criteria Air Pollutants	12–1
Total National Emissions of the Criteria Air Pollutants by Sector, 2013	12–2
Aircraft	
Aircraft – Exhaust Emission Standards.....	12–24
All	
United States Petroleum Production and Consumption – All Sectors, 1973–2040	1–18
All Highway Vehicles Characteristics	3–1
Alternative	
Alternative Fuel and Oxygenate Consumption, 2005–2011	2–5
Alternative Fuel and Advanced Technology Vehicles and Characteristics	6–1
Estimates of Alternative Fuel Highway Vehicles in Use, 1995–2011	6–3
Alternative Fuel Transit Vehicles, 2013	6–4
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–7
Number of Alternative Refuel Sites by State and Fuel Type, 2014	6–13
Properties of Conventional and Alternative Liquid Fuels.....	6–16
Properties of Conventional and Alternative Gaseous Fuels.....	6–17
Federal and State Alternative Fuel Incentives, 2014.....	10–12
Amtrak	
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971–2012	9–11
Annual	
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2012.....	7–3
Average Annual Expenditures of Households by Income, 2012	8–4
Annual Household Expenditures for Transportation, 1985-2012	8–5
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–8

Annual (continued)	
Average Annual Miles per Household Vehicle by Vehicle Age.....	8–13
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8–14
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8–16
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8–18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–19
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11–13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11–14
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2013.....	11–15
Attributes	
Driving Cycle Attributes	4–31
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4–36
Available	
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–5
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–7
Electric Drive Vehicles Available by Manufacturer, Model Year 2014.....	6–10
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6–12
Average	
U.S. Average Vehicle Age, 1995–2013	3–14
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000, and 2012	4–16
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013	4–21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013	4–22
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983–2012	4–23
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–25
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2012.....	7–3
Average Length of Time Commercial Fleet Vehicles are in Service, 2012.....	7–3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2012.....	7–4
Average Annual Expenditures of Households by Income, 2012	8–4
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS.....	8–9
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8–11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8–12
Average Annual Miles per Household Vehicle by Vehicle Age.....	8–13
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8–14
Average Daily Miles Driven (per Driver), 2009 NHTS.....	8–17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8–18
Average Price of a New Car, 1913–2012.....	10–14
Average Price of a New Car (Domestic and Import), 1970–2012	10–15
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2013.....	11–15

Aviation	
Summary Statistics for General Aviation, 1970–2012.....	9–4
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978–2013.....	10–10
Barrel	
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978–2013.....	1–15
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978–2013.....	10–7
Bicycle	
Bicycle Sales, 1981–2011.....	8–23
Bike	
Walk and Bike Trips by Trip Purpose, 2009 NHTS.....	8–24
Boat	
Recreational Boat Energy Use, 1970–2012.....	9–7
Bus	
Truck and Bus Registrations for Selected Countries, 1960–2012.....	3–4
Buses	
Summary Statistics on Transit Buses and Trolleybuses, 1994–2012.....	5–26
CAFE	
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013.....	4–21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013.....	4–22
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983–2012.....	4–23
California	
California Car, Light Truck and Medium Truck Emission Certification Standards.....	12–23
Car	
Car Registrations for Selected Countries, 1960–2012.....	3–3
Car Scrapage and Survival Rates, 1970, 1980 and 1990 Model Years.....	3–16
New Retail Car Sales in the United States, 1970–2013.....	4–5
Definition of Car Sport Utility Vehicles in Model Year 2013.....	4–8
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013.....	4–21
Average Price of a New Car, 1913–2012.....	10–14
Average Price of a New Car (Domestic and Import), 1970–2012.....	10–15
Car Operating Cost per Mile, 1985–2013.....	10–16
Fixed Car Operating Costs per Year, 1975–2013.....	10–17
California Car, Light Truck and Medium Truck Emission Certification Standards.....	12–23
Carbon	
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990–2012.....	11–6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector.....	11–7
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975–2013.....	11–13

Carbon (continued)	
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11-14
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2013	11-15
Carbon Dioxide	
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2025	4-19
Fuel Economy and Carbon Dioxide Targets for Model Year 2025	4-20
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
World Carbon Dioxide Emissions, 1990 and 2013	11-2
Direct Carbon Dioxide Emissions from a Gallon of Fuel	11-16
Carbon Monoxide	
Total National Emissions of Carbon Monoxide, 1970-2013	12-3
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005	12-4
Carriers	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2013	9-3
Cars	
World Production of Cars and Trucks, 2000-2012	3-2
U.S. Cars and Trucks in Use, 1970-2012	3-6
Cars in Operation by Age, 1970, 2001, and 2013	3-12
Summary Statistics for Cars, 1970-2012	4-2
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013	4-7
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013	4-13
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013	4-15
The Gas Guzzler Tax on New Cars	4-24
List of Model Year 2013 Cars with Gas Guzzler Taxes	4-25
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11-13
Census	
Household Vehicle Ownership, 1960-2012 Census	8-6
Certificated	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2013	9-3
Certification	
California Car, Light Truck and Medium Truck Emission Certification Standards	12-23
Characteristics	
All Highway Vehicles Characteristics	3-1
Light Vehicles and Characteristics	4-1
Heavy Vehicles and Characteristics	5-1
Alternative Fuel and Advanced Technology Vehicles and Characteristics	6-1

Characteristics (continued)	
Fleet Vehicles and Characteristics	7-1
Household Vehicles and Characteristics	8-1
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-21
Housing Unit Characteristics, 2010	8-21
Long-Distance Trip Characteristics, 2001 NHTS	8-26

Car Registrations for Selected Countries, 1960–2012	3–3
Truck and Bus Registrations for Selected Countries, 1960–2012.....	3–4
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012)	3–7
Vehicles per Thousand People in Other Countries, 2002 and 2012.....	3–9
Top Ten Natural Gas Producing Countries, 2012	6–15
Gasoline Prices for Selected Countries, 1990–2013	10–3
Diesel Fuel Prices for Selected Countries, 1998–2013	10–4
Gasoline Prices for Selected Countries, 1990 and 2013	10–5
Diesel Prices for Selected Countries, 1990 and 2013	10–6
Country	
Imported Crude Oil by Country of Origin, 1973–2013	1–9

Criteria	
Criteria Air Pollutants	12-1
Total National Emissions of the Criteria Air Pollutants by Sector, 2013	12-2
Crude	
Proved Reserves of Crude Oil and Natural Gas, 1980-2012	1-2
World Crude Oil Production, 1960-2013	1-3
Imported Crude Oil by Country of Origin, 1973-2013	1-9
Crude Oil Supplies, 1973-2013	1-10
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2012	1-14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2013.....	1-15
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2013.....	10-7
Curb	
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013	4-15
Cycle	
Driving Cycle Attributes	4-31
City Driving Cycle	4-32
Highway Driving Cycle	4-32
Air Conditioning (SC03) Driving Cycle	4-33
Cold Temperature (Cold FTP) Driving Cycle.....	4-33
High Speed (US06) Driving Cycle.....	4-34
New York City Driving Cycle	4-35
Representative Number Five Driving Cycle	4-35
Cycles	
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4-36
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4-36
Daily	
Average Daily Miles Driven (per Driver), 2009 NHTS.....	8-17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8-18
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-18
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-21
Dealerships	
New Light Vehicle Dealerships and Sales, 1970-2012	4-17
Definition	
Definition of Car Sport Utility Vehicles in Model Year 2013	4-8
Demand	
Summary Statistics on Demand Response Vehicles, 1994-2012	4-37
Demographic	
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS.....	8-7

Density	
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-21
Dependence	
Costs of Oil Dependence to the U.S. Economy, 1970-2012	1-12
Diesel	
Highway Usage of Gasoline and Diesel, 1973-2012.....	2-13
Diesel Fuel Prices for Selected Countries, 1998-2013	10-4
Diesel Prices for Selected Countries, 1990 and 2013	10-6
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2013	10-9
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12-39
Differing	
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4-36
Direct	
Direct Carbon Dioxide Emissions from a Gallon of Fuel	11-16
Distance	
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5-16
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-15
Distribution	
Distribution of Energy Consumption by Source, 1973 and 2013	2-4
Distribution of Trucks over 26,000 lbs. by Vehicle-Miles Traveled	5-11
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008.....	5-20
Domestic	
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2012	2-7
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013.....	4-7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013	4-14
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013	4-15
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000, and 2012	4-16
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2012.....	7-4
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2013	9-3
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2012	9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2012.....	9-6
Average Price of a New Car (Domestic and Import), 1970-2012	10-15

Domestic (continued)	
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11-13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11-14
Drive	
Electric Drive Vehicles Available by Manufacturer, Model Year 2014	6-10
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6-12
Driven	
Average Daily Miles Driven (per Driver), 2009 NHTS.....	8-17
Driver	
Average Daily Miles Driven (per Driver), 2009 NHTS.....	8-17
Driving	
Driving Cycle Attributes	4-31
City Driving Cycle	4-32
Highway Driving Cycle	4-32
Air Conditioning (SC03) Driving Cycle	4-33
Cold Temperature (Cold FTP) Driving Cycle.....	4-33
High Speed (US06) Driving Cycle.....	4-34
New York City Driving Cycle	4-35
Representative Number Five Driving Cycle	4-35
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4-36
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4-36
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-21
Dwelling	
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-21
E85	
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-5
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-7
Each	
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Economic	
Oil Price and Economic Growth, 1970-2013	1-11
Economies	
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013	4-7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013.....	4-10

Economy	
Costs of Oil Dependence to the U.S. Economy, 1970–2012	1–12
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012–2025.....	4–19
Fuel Economy and Carbon Dioxide Targets for Model Year 2025	4–20
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013	4–21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2013	4–22
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983–2012	4–23
Fuel Economy by Speed, PSAT Model Results.....	4–28
Fuel Economy by Speed, 1973, 1984, 1997, and 2012 Studies	4–29
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5–6
Effect of Terrain on Class 8 Truck Fuel Economy	5–14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5–15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5–16
Transportation and the Economy	10–1
Effect	
Effect of Terrain on Class 8 Truck Fuel Economy	5–14
Electric	
Electric Drive Vehicles Available by Manufacturer, Model Year 2014.....	6–10
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6–12
Electronic	
Share of Heavy Trucks with Selected Electronic Features, 2002	5–12
Emission	
Tier 3 Evaporative Emission Standards	12–15
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12–15
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12–16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards	12–17
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12–18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12–20
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12–22
California Car, Light Truck and Medium Truck Emission Certification Standards	12–23
Aircraft – Exhaust Emission Standards.....	12–24
Nonroad Compression-Ignition Engines – Exhaust Emission Standards.....	12–25
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12–27
Locomotives – Exhaust Emission Standards	12–28
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards	12–30
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12–34
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12–36

Emissions	
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012–2025.....	4–19
Greenhouse Gas Emissions	11–1
World Carbon Dioxide Emissions, 1990 and 2013	11–2
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2012	11–4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11–5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990–2012.....	11–6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11–7
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2012.....	11–8
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies.....	11–11
Direct Carbon Dioxide Emissions from a Gallon of Fuel	11–16
Total National Emissions of the Criteria Air Pollutants by Sector, 2013	12–2
Total National Emissions of Carbon Monoxide, 1970–2013.....	12–3
Emissions of Carbon Monoxide from Highway Vehicles, 1970–2005.....	12–4
Total National Emissions of Nitrogen Oxides, 1970–2013	12–5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970–2005	12–6
Total National Emissions of Volatile Organic Compounds, 1970–2013.....	12–7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970–2005.....	12–8
Total National Emissions of Particulate Matter (PM-10), 1970–2013.....	12–9
Total National Emissions of Particulate Matter (PM-2.5), 1990–2013	12–11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005	12–12
Employment	
Transportation-Related Employment, 2000 and 2013	10–19
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2013	10–20
Empty	
Gross Vehicle Weight vs. Empty Vehicle Weight.....	5–19
End-Use	
Consumption of Petroleum by End-Use Sector, 1973–2013	1–20
U. S. Consumption of Total Energy by End-Use Sector, 1973–2013.....	2–3
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11–5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990–2012.....	11–6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11–7
Energy	
Energy	2–1
World Consumption of Primary Energy, 2011	2–2
U. S. Consumption of Total Energy by End-Use Sector, 1973–2013.....	2–3
Distribution of Energy Consumption by Source, 1973 and 2013	2–4
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2012	2–7
Transportation Energy Use by Mode, 2011–2012	2–8
Highway Transportation Energy Consumption by Mode, 1970–2012	2–9
Nonhighway Transportation Energy Consumption by Mode, 1970–2012	2–10
Passenger Travel and Energy Use, 2012.....	2–14
Energy Intensities of Highway Passenger Modes, 1970–2012	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2012	2–16
Energy Intensity of Light Rail Transit Systems, 2012	2–17
Energy Intensity of Commuter Rail Systems, 2012.....	2–18

Energy (continued)	
Energy Intensity of Heavy Rail Systems, 2012.....	2-18
Energy Intensities of Freight Modes, 1970-2012	2-19
Nonhighway Energy Use Shares, 1970-2012.....	9-2
Recreational Boat Energy Use, 1970-2012	9-7
Engine	
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013.....	4-14
Engines	
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12-18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12-20
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12-22
Nonroad Compression-Ignition Engines – Exhaust Emission Standards.....	12-25
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12-27
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards	12-30
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12-34
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12-36
Equipment	
Fuel Consumption from Lawn and Garden Equipment, 2012	2-12
Estimates	
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999	4-4
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-22
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2011	6-3
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
Ethanol	
Ethanol Consumption, 1995-2011	2-6
European	
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4-36
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4-36
Evaporative	
Tier 3 Evaporative Emission Standards	12-15
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards	12-17
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12-22
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12-27
Example	
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4-36

Excise	
Federal Excise Taxes on Motor Fuels, 2011	10-11
Exhaust	
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12-16
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12-18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12-20
Aircraft – Exhaust Emission Standards.....	12-24
Nonroad Compression-Ignition Engines – Exhaust Emission Standards.....	12-25
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12-27
Locomotives – Exhaust Emission Standards	12-28
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards	12-30
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12-34
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12-36
Expenditures	
Average Annual Expenditures of Households by Income, 2012	8-4
Annual Household Expenditures for Transportation, 1985-2012	8-5
Personal Consumption Expenditures, 1970–2013.....	10-18
Exports	
United States Petroleum Production, Imports and Exports, 1950–2013.....	1-16
Facility	
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5-10
Features	
Share of Heavy Trucks with Selected Electronic Features, 2002	5-12
Federal	
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2012.....	7-4
Federal Government Vehicles, 2001–2012.....	7-5
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2012.....	7-6
Fuel Consumed by Federal Government Fleets, FY 2000–2012	7-6
Federal Government Vehicles by Agency, FY 2012	7-7
Federal Excise Taxes on Motor Fuels, 2011	10-11
Federal and State Alternative Fuel Incentives, 2014.....	10-12
Federal and State Advanced Technology Incentives, 2014	10-13
Feedstocks	
GREET Model Feedstocks and Fuels	11-10
Fines	
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983–2012	4-23
Five	
Representative Number Five Driving Cycle	4-35
Fixed	
Fixed Car Operating Costs per Year, 1975–2013	10-17

Fleet	
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Fleet Vehicles and Characteristics	7-1
Fleet Vehicles in Service as of January 1, 2013.....	7-2
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2012.....	7-3
Average Length of Time Commercial Fleet Vehicles are in Service, 2012.....	7-3
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7-3
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2012.....	7-6
Fleets	
Fuel Consumed by Federal Government Fleets, FY 2000-2012	7-6
Flex-Fuel	
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-5
Flow	
Value of Goods in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-22
Tons of Freight in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-23
Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-24
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-25
Footprint	
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11-13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11-14
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2013.....	11-15
Fossil	
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2012.....	11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11-7
Four-Tire	
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970-2012	4-3
Freight	
Energy Intensities of Freight Modes, 1970-2012	2-19
Tons of Freight in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-23
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2012	9-8
Summary Statistics for Class I Freight Railroads, 1970-2012	9-9
FTP	
Cold Temperature (Cold FTP) Driving Cycle.....	4-33
Fuel	
Alternative Fuel and Oxygenate Consumption, 2005-2011	2-5
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2012	2-7

Fuel (continued)

Off-Highway Transportation-Related Fuel Consumption from the Nonroad Model, 2012.....	2-11
Fuel Consumption from Lawn and Garden Equipment, 2012	2-12
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013.....	4-7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013.....	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2025.....	4-19
Fuel Economy and Carbon Dioxide Targets for Model Year 2025	4-20
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-22
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2012	4-23
Fuel Economy by Speed, PSAT Model Results.....	4-28
Fuel Economy by Speed, 1973, 1984, 1997, and 2012 Studies	4-29
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5-6
Effect of Terrain on Class 8 Truck Fuel Economy	5-14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination.....	5-17
Alternative Fuel and Advanced Technology Vehicles and Characteristics	6-1
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2011	6-3
Alternative Fuel Transit Vehicles, 2013	6-4
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-7
Number of Alternative Refuel Sites by State and Fuel Type, 2014.....	6-13
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2012.....	7-6
Fuel Consumed by Federal Government Fleets, FY 2000-2012	7-6
Diesel Fuel Prices for Selected Countries, 1998-2013	10-4
Retail Prices for Motor Fuel, 1978-2013.....	10-8
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2013.....	10-10
Federal and State Alternative Fuel Incentives, 2014.....	10-12
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2012.....	11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11-7
Direct Carbon Dioxide Emissions from a Gallon of Fuel	11-16
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12-39

Fueling

Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5-10

Fuels

Properties of Conventional and Alternative Liquid Fuels.....	6-16
Properties of Conventional and Alternative Gaseous Fuels.....	6-17
Federal Excise Taxes on Motor Fuels, 2011	10-11
GREET Model Feedstocks and Fuels	11-10
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies.....	11-11

Function	
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination.....	5-17
Gallon	
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2013.....	10-7
Direct Carbon Dioxide Emissions from a Gallon of Fuel	11-16
Garden	
Fuel Consumption from Lawn and Garden Equipment, 2012	2-12
Gas	
Proved Reserves of Crude Oil and Natural Gas, 1980-2012	1-2
World Natural Gas Reserves, Production and Consumption, 2012	1-7
The Gas Guzzler Tax on New Cars.....	4-24
List of Model Year 2013 Cars with Gas Guzzler Taxes	4-25
Tax Receipts from the Sale of Gas Guzzlers, 1980-2012.....	4-27
Top Ten Natural Gas Producing Countries, 2012	6-15
Greenhouse Gas Emissions	11-1
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11-5
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2012.....	11-8
Gaseous	
Properties of Conventional and Alternative Gaseous Fuels.....	6-17
Gases	
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2012	11-4
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards	12-14
Gasoline	
Highway Usage of Gasoline and Diesel, 1973-2012.....	2-13
Gasoline Prices for Selected Countries, 1990-2013	10-3
Gasoline Prices for Selected Countries, 1990 and 2013	10-5
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2013.....	10-7
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2013.....	10-10
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond	12-15
Gasoline Sulfur Standards.....	12-38
General	
Summary Statistics for General Aviation, 1970-2012.....	9-4
Global	
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2012	11-4
Goods	
Value of Goods in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-22

Government	
Federal Government Vehicles, 2001–2012	7–5
Fuel Consumed by Federal Government Fleets, FY 2000–2012	7–6
Federal Government Vehicles by Agency, FY 2012	7–7
Greenhouse	
Greenhouse Gas Emissions	11–1
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2012	11–4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11–5
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2012.....	11–8
GREET	
GREET Model	11–9
GREET Model Feedstocks and Fuels	11–10
Gross	
Refinery Gross Output by World Region, 2003 and 2013	1–13
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013	4–6
New Retail Truck Sales by Gross Vehicle Weight, 1970–2013	5–4
Truck Statistics by Gross Vehicle Weight Class, 2002.....	5–6
Gross Vehicle Weight vs. Empty Vehicle Weight	5–19
Growth	
Oil Price and Economic Growth, 1970–2013	1–11
Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–24
Guzzler	
The Gas Guzzler Tax on New Cars.....	4–24
List of Model Year 2013 Cars with Gas Guzzler Taxes	4–25
Guzzlers	
Tax Receipts from the Sale of Gas Guzzlers, 1980–2012.....	4–27
Harmonic	
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5–6
Heavy	
Energy Intensity of Heavy Rail Systems, 2012.....	2–18
Heavy Truck Scrappage and Survival Rates	3–18
Heavy Vehicles and Characteristics	5–1
Share of Heavy Trucks with Selected Electronic Features, 2002	5–12
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6–12
Heavy-Duty	
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12–18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12–20
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12–22
High	
High Speed (US06) Driving Cycle.....	4–34

Highway

Highway Transportation Petroleum Consumption by Mode, 1970–2012.....	1–21
Highway Transportation Energy Consumption by Mode, 1970–2012	2–9
Highway Usage of Gasoline and Diesel, 1973–2012.....	2–13
Energy Intensities of Highway Passenger Modes, 1970–2012	2–15
All Highway Vehicles Characteristics	3–1
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2012	3–11
Highway Driving Cycle	4–32
Estimates of Alternative Fuel Highway Vehicles in Use, 1995–2011	6–3
Emissions of Carbon Monoxide from Highway Vehicles, 1970–2005.....	12–4
Emissions of Nitrogen Oxides from Highway Vehicles, 1970–2005	12–6
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970–2005.....	12–8
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005	12–12
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12–18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12–20
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12–22
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12–39

Household

Household Vehicles and Characteristics	8–1
Annual Household Expenditures for Transportation, 1985-2012	8–5
Household Vehicle Ownership, 1960–2012 Census	8–6
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8–9
Average Annual Miles per Household Vehicle by Vehicle Age.....	8–13
Household Vehicle Trips, 2009 NHTS	8–17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8–18
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8–18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–19
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–19

Households

Average Annual Expenditures of Households by Income, 2012	8–4
---	-----

Housing

Housing Unit Characteristics, 2010	8–21
--	------

Hybrid

Hybrid and Plug-In Vehicle Sales, 1999-2013.....	6–9
--	-----

Import

Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2013	4–7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2013	4–9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4–10

Import (continued)	
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975–2013	4–13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975–2013	4–14
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975–2013	4–15
Average Price of a New Car (Domestic and Import), 1970–2012	10–15
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975–2013	11–13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975–2013	11–14
Imported	
Imported Crude Oil by Country of Origin, 1973–2013	1–9
Imports	
U.S. Petroleum Imports, 1960–2013	1–8
United States Petroleum Production, Imports and Exports, 1950–2013	1–16
Incentives	
Federal and State Alternative Fuel Incentives, 2014	10–12
Federal and State Advanced Technology Incentives, 2014	10–13
Income	
Average Annual Expenditures of Households by Income, 2012	8–4
Index	
Transportation Services Index, January 1990–January 2014	10–2
Indices	
Consumer Price Indices, 1970–2013	10–18
Input	
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2012	1–14
Intensities	
Energy Intensities of Highway Passenger Modes, 1970–2012	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2012	2–16
Energy Intensities of Freight Modes, 1970–2012	2–19
Intensity	
Energy Intensity of Light Rail Transit Systems, 2012	2–17
Energy Intensity of Commuter Rail Systems, 2012	2–18
Energy Intensity of Heavy Rail Systems, 2012	2–18
Intermodal	
Intermodal Rail Traffic, 1965–2012	9–10
International	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2013	9–3
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970–2012	9–5

Japanese	
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4-36
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4-36
Jet	
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2013.....	10-10
Large	
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12-27
Lawn	
Fuel Consumption from Lawn and Garden Equipment, 2012	2-12
Length	
Average Length of Time Commercial Fleet Vehicles are in Service, 2012.....	7-3
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-8
Light	
Energy Intensity of Light Rail Transit Systems, 2012	2-17
Light Truck Scrapage and Survival Rates	3-17
Light Vehicles and Characteristics.....	4-1
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999	4-4
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks.....	4-4
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Light Vehicle Production Shares, Model Years 1975-2013	4-12
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013	4-14
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000, and 2012	4-16
New Light Vehicle Dealerships and Sales, 1970-2012	4-17
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-22
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7-3
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11-14
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond	12-15
California Car, Light Truck and Medium Truck Emission Certification Standards	12-23
Light-Duty	
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12-16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards	12-17
Liquid	
Properties of Conventional and Alternative Liquid Fuels.....	6-16

List	
List of Model Year 2013 Cars with Gas Guzzler Taxes	4–25
Locomotive	
Locomotives – Exhaust Emission Standards	12–28
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12–39
Long-Distance	
Long-Distance Trip Characteristics, 2001 NHTS	8–26
Major	
Percentage of Trucks by Size Ranked by Major Use, 2002	5–8
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5–10
Manufacturer	
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–5
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–7
Electric Drive Vehicles Available by Manufacturer, Model Year 2014.....	6–10
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6–12
Manufacturing	
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2013	10–20
Marine	
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards	12–30
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12–34
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12–39
Material	
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000, and 2012	4–16
Matter	
Total National Emissions of Particulate Matter (PM–10), 1970–2013.....	12–9
Total National Emissions of Particulate Matter (PM-2.5), 1990–2013	12–11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005	12–12
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12–15
Mean	
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5–6
Means	
Means of Transportation to Work, 1980, 1990, 2000 and 2012	8–20
Medium	
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6–12
California Car, Light Truck and Medium Truck Emission Certification Standards	12–23
Medium-Duty	
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12–16

Medium-Duty (continued)	
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2	
Evaporative Emission Standards	12-17
Mile	
Car Operating Cost per Mile, 1985–2013	10-16
Miles	
Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012	
Commodity Flow Surveys	5-24
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007,	
and 2012 Commodity Flow Surveys	5-25
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2012.....	7-4
Average Annual Miles per Household Vehicle by Vehicle Age.....	8-13
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8-14
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8-16
Average Daily Miles Driven (per Driver), 2009 NHTS.....	8-17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a	
Household, 2009 NHTS	8-18
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household,	
2009 NHTS.....	8-18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Mode	
Highway Transportation Petroleum Consumption by Mode, 1970–2012.....	1-21
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2012	1-22
Transportation Petroleum Use by Mode, 2011–2012	1-23
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2012	2-7
Transportation Energy Use by Mode, 2011–2012	2-8
Highway Transportation Energy Consumption by Mode, 1970–2012	2-9
Nonhighway Transportation Energy Consumption by Mode, 1970–2012	2-10
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2012.....	11-8
Model	
Off-Highway Transportation-Related Fuel Consumption from the Nonroad Model, 2012.....	2-11
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years.....	3-16
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Cars, Selected Model Years 1975–2013	4-7
Definition of Car Sport Utility Vehicles in Model Year 2013	4-8
Production, Production Shares, and Production-Weighted Fuel Economies of New	
Domestic and Import Light Trucks, Model Years 1975–2013	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars,	
Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Light Vehicle Production Shares, Model Years 1975–2013	4-12
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years	
1975–2013	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model	
Years 1975–2013.....	4-14
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years	
1975–2013	4-15
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000,	
and 2012	4-16

Model (continued)

Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012–2025.....	4–19
Fuel Economy and Carbon Dioxide Targets for Model Year 2025	4–20
List of Model Year 2013 Cars with Gas Guzzler Taxes	4–25
Fuel Economy by Speed, PSAT Model Results.....	4–28
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–5
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–7
Electric Drive Vehicles Available by Manufacturer, Model Year 2014.....	6–10
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7–3
GREET Model	11–9
GREET Model Feedstocks and Fuels	11–10
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11–13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11–14
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12–15

Modes

Energy Intensities of Highway Passenger Modes, 1970–2012	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2012	2–16
Energy Intensities of Freight Modes, 1970–2012	2–19
Nonhighway Modes	9–1

Motor

Retail Prices for Motor Fuel, 1978–2013.....	10–8
Federal Excise Taxes on Motor Fuels, 2011	10–11
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2013	10–20

National

Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971–2012	9–11
Total National Emissions of the Criteria Air Pollutants by Sector, 2013	12–2
Total National Emissions of Carbon Monoxide, 1970–2013.....	12–3
Total National Emissions of Nitrogen Oxides, 1970–2013	12–5
Total National Emissions of Volatile Organic Compounds, 1970–2013.....	12–7
Total National Emissions of Particulate Matter (PM-10), 1970–2013.....	12–9
Total National Emissions of Particulate Matter (PM-2.5), 1990–2013	12–11

Natural

Proved Reserves of Crude Oil and Natural Gas, 1980–2012	1–2
World Natural Gas Reserves, Production and Consumption, 2012	1–7
Top Ten Natural Gas Producing Countries, 2012	6–15

New

New Retail Vehicle Sales, 1970–2013.....	3–15
New Retail Car Sales in the United States, 1970–2013	4–5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013	4–6
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2013.....	4–7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2013.....	4–9

New (continued)

Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013	4-14
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013	4-15
New Light Vehicle Dealerships and Sales, 1970-2012	4-17
The Gas Guzzler Tax on New Cars.....	4-24
New Retail Truck Sales by Gross Vehicle Weight, 1970-2013	5-4
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7-3
Average Price of a New Car, 1913-2012.....	10-14
Average Price of a New Car (Domestic and Import), 1970-2012	10-15
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11-13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11-14

New York

New York City Driving Cycle	4-35
-----------------------------------	------

NHTS

Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS.....	8-7
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8-9
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS.....	8-10
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8-11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8-12
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8-14
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-15
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8-16
Average Daily Miles Driven (per Driver), 2009 NHTS.....	8-17
Household Vehicle Trips, 2009 NHTS	8-17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8-18
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Walk and Bike Trips by Trip Purpose, 2009 NHTS	8-24
Long-Distance Trip Characteristics, 2001 NHTS	8-26

Nitrogen

Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards	12-14
---	-------

Nitrogen Oxides	
Total National Emissions of Nitrogen Oxides, 1970–2013	12–5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970–2005	12–6
Non-E85	
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6–7
Nonhighway	
Nonhighway Transportation Petroleum Consumption by Mode, 1970–2012	1–22
Nonhighway Transportation Energy Consumption by Mode, 1970–2012	2–10
Energy Intensities of Nonhighway Passenger Modes, 1970–2012	2–16
Nonhighway Modes	9–1
Nonhighway Energy Use Shares, 1970–2012.....	9–2
Non-Methane	
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards	12–14
Nonroad	
Off-Highway Transportation-Related Fuel Consumption from the Nonroad Model, 2012.....	2–11
Nonroad Compression-Ignition Engines – Exhaust Emission Standards.....	12–25
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12–27
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12–36
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12–39
NPTS	
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS.....	8–7
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8–9
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8–11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8–12
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8–14
NRLM	
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards	12–39
Number	
Representative Number Five Driving Cycle	4–35
Number of Alternative Refuel Sites by State and Fuel Type, 2014.....	6–13
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8–9
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8–18
Refiner Sales Prices for Propane and No. 2 Diesel, 1978–2013	10–9
Numerical	
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11–3
Occupancy	
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8–11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8–12

Odometer	
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8-14
Off-Highway	
Off-Highway Transportation-Related Fuel Consumption from the Nonroad Model, 2012.....	2-11
Oil	
Proved Reserves of Crude Oil and Natural Gas, 1980-2012	1-2
World Crude Oil Production, 1960-2013	1-3
World Oil Reserves, Production and Consumption, 2012	1-6
Imported Crude Oil by Country of Origin, 1973-2013	1-9
Crude Oil Supplies, 1973-2013	1-10
Oil Price and Economic Growth, 1970-2013	1-11
Costs of Oil Dependence to the U.S. Economy, 1970-2012	1-12
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2012	1-14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2013.....	1-15
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2013.....	10-7
On-Road	
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008.....	5-20
Operating	
Car Operating Cost per Mile, 1985-2013	10-16
Fixed Car Operating Costs per Year, 1975-2013	10-17
Operation	
Cars in Operation by Age, 1970, 2001, and 2013	3-12
Trucks in Operation by Age, 1970, 2001, and 2013	3-13
Operations	
Summary Statistics for Commuter Rail Operations, 1984-2012	9-12
Summary Statistics for Rail Transit Operations, 1970-2012.....	9-13
Organic	
Total National Emissions of Volatile Organic Compounds, 1970-2013	12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005.....	12-8
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards	12-14
Origin	
Imported Crude Oil by Country of Origin, 1973-2013	1-9
Other	
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012).....	3-7
Vehicles per Thousand People in Other Countries, 2002 and 2012.....	3-9
Output	
Refinery Gross Output by World Region, 2003 and 2013	1-13
Ownership	
Household Vehicle Ownership, 1960-2012 Census	8-6

Oxide
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards 12-14

Oxygenate
Alternative Fuel and Oxygenate Consumption, 2005-2011 2-5

Particulate
Total National Emissions of Particulate Matter (PM-10), 1970-2013 12-9
Total National Emissions of Particulate Matter (PM-2.5), 1990-2013 12-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005 12-12
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017
and Beyond 12-15

Parts
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing,
1990-2013 10-20

Passenger
Passenger Travel and Energy Use, 2012 2-14
Energy Intensities of Highway Passenger Modes, 1970-2012 2-15
Energy Intensities of Nonhighway Passenger Modes, 1970-2012 2-16
Summary Statistics for the National Railroad Passenger Corporation (Amtrak),
1971-2012 9-11
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2
Exhaust Emission Standards 12-16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2
Evaporative Emission Standards 12-17

People
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002
and 2012) 3-7
Vehicles per Thousand People in Other Countries, 2002 and 2012 3-9
Vehicles per Thousand People in the United States, 1990-2012 3-10

Per Capita
Vehicles and Vehicle-Miles per Capita, 1950-2012 8-3

Percent
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer
Tire Combination 5-17

Percentage
Percentage of Trucks by Size Ranked by Major Use, 2002 5-8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002 5-9
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination
and Percentage of Total Distance Traveled as a Function of Speed 5-16

Personal
Personal Consumption Expenditures, 1970-2013 10-18

Petroleum
World Petroleum Production, 1973-2013 1-4
World Petroleum Consumption, 1960-2012 1-5

Petroleum (continued)	
U.S. Petroleum Imports, 1960–2013	1–8
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2012	1–14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978–2013.....	1–15
United States Petroleum Production, Imports and Exports, 1950–2013.....	1–16
Petroleum Production and Transportation Petroleum Consumption in Context, 1950–2013	1–17
United States Petroleum Production and Consumption – All Sectors, 1973–2040	1–18
United States Petroleum Production, and Transportation Consumption, 1970–2040.....	1–19
Consumption of Petroleum by End-Use Sector, 1973–2013	1–20
Highway Transportation Petroleum Consumption by Mode, 1970–2012.....	1–21
Nonhighway Transportation Petroleum Consumption by Mode, 1970–2012	1–22
Transportation Petroleum Use by Mode, 2011–2012	1–23
Plug-In	
Hybrid and Plug-In Vehicle Sales, 1999–2013.....	6–9
PM-10	
Total National Emissions of Particulate Matter (PM–10), 1970–2013.....	12–9
PM-2.5	
Total National Emissions of Particulate Matter (PM-2.5), 1990–2013	12–11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005	12–12
Pollutants	
Criteria Air Pollutants	12–1
Total National Emissions of the Criteria Air Pollutants by Sector, 2013	12–2
Population	
Population and Vehicle Profile, 1950–2012	8–2
Potential	
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11–3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2012	11–4
Pounds	
Distribution of Trucks over 26,000 lbs. by Vehicle-Miles Traveled	5–11
Price	
Oil Price and Economic Growth, 1970–2013	1–11
Average Price of a New Car, 1913–2012.....	10–14
Average Price of a New Car (Domestic and Import), 1970–2012	10–15
Consumer Price Indices, 1970–2013.....	10–18
Prices	
Gasoline Prices for Selected Countries, 1990–2013	10–3
Diesel Fuel Prices for Selected Countries, 1998–2013	10–4
Gasoline Prices for Selected Countries, 1990 and 2013	10–5
Diesel Prices for Selected Countries, 1990 and 2013	10–6
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978–2013.....	10–7
Retail Prices for Motor Fuel, 1978–2013.....	10–8
Refiner Sales Prices for Propane and No. 2 Diesel, 1978–2013	10–9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978–2013.....	10–10

Primary	
World Consumption of Primary Energy, 2011	2-2
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5-10
Producing	
Top Ten Natural Gas Producing Countries, 2012	6-15
Production	
World Crude Oil Production, 1960-2013	1-3
World Petroleum Production, 1973-2013	1-4
World Oil Reserves, Production and Consumption, 2012	1-6
World Natural Gas Reserves, Production and Consumption, 2012	1-7
United States Petroleum Production, Imports and Exports, 1950-2013	1-16
Petroleum Production and Transportation Petroleum Consumption in Context, 1950-2013	1-17
United States Petroleum Production and Consumption – All Sectors, 1973-2040	1-18
United States Petroleum Production, and Transportation Consumption, 1970-2040	1-19
World Production of Cars and Trucks, 2000-2012	3-2
Production Sales, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013	4-7
Light Vehicle Production Shares, Model Years 1975-2013	4-12
Production-Weighted	
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013	4-9
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013	4-14
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013	4-15
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013	11-13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11-14
Products	
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2012	1-14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2013	1-15
Profile	
Population and Vehicle Profile, 1950-2012	8-2
Propane	
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2013	10-9
Properties	
Properties of Conventional and Alternative Liquid Fuels	6-16
Properties of Conventional and Alternative Gaseous Fuels	6-17
Proved	
Proved Reserves of Crude Oil and Natural Gas, 1980-2012	1-2

PSAT	
Fuel Economy by Speed, PSAT Model Results.....	4-28
Purpose	
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS.....	8-10
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8-12
Walk and Bike Trips by Trip Purpose, 2009 NHTS	8-24
Rail	
Energy Intensity of Light Rail Transit Systems, 2012	2-17
Energy Intensity of Commuter Rail Systems, 2012	2-18
Energy Intensity of Heavy Rail Systems, 2012.....	2-18
Intermodal Rail Traffic, 1965-2012.....	9-10
Summary Statistics for Commuter Rail Operations, 1984-2012	9-12
Summary Statistics for Rail Transit Operations, 1970-2012.....	9-13
Railroad	
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2012	9-8
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2012	9-11
Railroads	
Summary Statistics for Class I Freight Railroads, 1970-2012	9-9
Ranked	
Percentage of Trucks by Size Ranked by Major Use, 2002.....	5-8
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2012	9-8
Rates	
Car Scrapage and Survival Rates, 1970, 1980 and 1990 Model Years.....	3-16
Light Truck Scrapage and Survival Rates.....	3-17
Heavy Truck Scrapage and Survival Rates.....	3-18
Receipts	
Tax Receipts from the Sale of Gas Guzzlers, 1980-2012.....	4-27
Recreational	
Recreational Boat Energy Use, 1970-2012	9-7
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12-36
Refiner	
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2013	10-9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2013.....	10-10
Refinery	
Refinery Gross Output by World Region, 2003 and 2013	1-13
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2012	1-14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2013.....	1-15
Refuel	
Number of Alternative Refuel Sites by State and Fuel Type, 2014.....	6-13

Refueling	
Conventional Refueling Stations, 1993–2012.....	4–18
Region	
Refinery Gross Output by World Region, 2003 and 2013.....	1–13
Registrations	
Car Registrations for Selected Countries, 1960–2012.....	3–3
Truck and Bus Registrations for Selected Countries, 1960–2012.....	3–4
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012.....	7–3
Representative	
Representative Number Five Driving Cycle.....	4–35
Reserves	
Proved Reserves of Crude Oil and Natural Gas, 1980–2012.....	1–2
World Oil Reserves, Production and Consumption, 2012.....	1–6
World Natural Gas Reserves, Production and Consumption, 2012.....	1–7
Response	
Summary Statistics on Demand Response Vehicles, 1994–2012.....	4–37
Results	
Fuel Economy by Speed, PSAT Model Results.....	4–28
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4–36
Retail	
New Retail Vehicle Sales, 1970–2013.....	3–15
New Retail Car Sales in the United States, 1970–2013.....	4–5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013.....	4–6
New Retail Truck Sales by Gross Vehicle Weight, 1970–2013.....	5–4
Retail Prices for Motor Fuel, 1978–2013.....	10–8
Revenue	
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton–Miles, 2012.....	9–8
Route	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2013.....	9–3
Sale	
Tax Receipts from the Sale of Gas Guzzlers, 1980–2012.....	4–27
Sales	
New Retail Vehicle Sales, 1970–2013.....	3–15
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989–1999.....	4–4
New Retail Car Sales in the United States, 1970–2013.....	4–5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013.....	4–6
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2013.....	4–7
New Light Vehicle Dealerships and Sales, 1970–2012.....	4–17
New Retail Truck Sales by Gross Vehicle Weight, 1970–2013.....	5–4
Hybrid and Plug-In Vehicle Sales, 1999–2013.....	6–9

Sales (continued)	
Bicycle Sales, 1981-2011	8-23
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2013	10-9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2013.....	10-10
Sales-Weighted	
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013	4-7
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-22
SC03	
Air Conditioning (SC03) Driving Cycle	4-33
Scrappage	
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years.....	3-16
Light Truck Scrappage and Survival Rates	3-17
Heavy Truck Scrappage and Survival Rates	3-18
Sector	
Consumption of Petroleum by End-Use Sector, 1973-2013	1-20
U.S. Consumption of Total Energy by End-Use Sector, 1973-2013.....	2-3
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11-5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990-2012.....	11-6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11-7
Total National Emissions of the Criteria Air Pollutants by Sector, 2013	12-2
Sectors	
United States Petroleum Production and Consumption – All Sectors, 1973-2040	1-18
Selected	
Car Registrations for Selected Countries, 1960-2012	3-3
Truck and Bus Registrations for Selected Countries, 1960-2012.....	3-4
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013	4-7
Share of Heavy Trucks with Selected Electronic Features, 2002	5-12
Gasoline Prices for Selected Countries, 1990-2013	10-3
Diesel Fuel Prices for Selected Countries, 1998-2013	10-4
Gasoline Prices for Selected Countries, 1990 and 2013	10-5
Diesel Prices for Selected Countries, 1990 and 2013	10-6
Self-Reported	
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS.....	8-14
Service	
Fleet Vehicles in Service as of January 1, 2013.....	7-2
Average Length of Time Commercial Fleet Vehicles are in Service, 2012.....	7-3
Services	
Transportation Services Index, January 1990-January 2014.....	10-2

Share	
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5-10
Share of Heavy Trucks with Selected Electronic Features, 2002	5-12
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-15
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8-16
Shares	
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2012	3-11
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013	4-7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013	4-9
Light Vehicle Production Shares, Model Years 1975-2013	4-12
Nonhighway Energy Use Shares, 1970-2012.....	9-2
Shipment	
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5-25
Single-Unit	
Summary Statistics for Class 3-8 Single-Unit Trucks, 1970-2012.....	5-2
Sites	
Number of Alternative Refuel Sites by State and Fuel Type, 2014	6-13
Size	
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013	4-14
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5-6
Truck Statistics by Size, 2002	5-7
Percentage of Trucks by Size Ranked by Major Use, 2002	5-8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Source	
Distribution of Energy Consumption by Source, 1973 and 2013	2-4
Spark-Ignition	
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12-20
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12-22
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards	12-27
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12-34
Speed	
Fuel Economy by Speed, PSAT Model Results.....	4-28
Fuel Economy by Speed, 1973, 1984, 1997, and 2012 Studies	4-29
High Speed (US06) Driving Cycle.....	4-34
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5-15

Speed (continued)	
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination.....	5-17
Sport	
Definition of Car Sport Utility Vehicles in Model Year 2013.....	4-8
Standards	
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2025.....	4-19
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013.....	4-21
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013.....	4-22
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards.....	12-14
Tier 3 Evaporative Emission Standards.....	12-15
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12-15
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12-16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards.....	12-17
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12-18
Heavy-Duty Highway Spark-Ignition Engines – Exhaust Emission Standards.....	12-20
Heavy-Duty Highway Compression-Ignition and Spark-Ignition Engines – Evaporative Emission Standards.....	12-22
California Car, Light Truck and Medium Truck Emission Certification Standards.....	12-23
Aircraft – Exhaust Emission Standards.....	12-24
Nonroad Compression-Ignition Engines – Exhaust Emission Standards.....	12-25
Nonroad Large Spark-Ignition Engines – Exhaust and Evaporative Emission Standards.....	12-27
Locomotives – Exhaust Emission Standards.....	12-28
Marine Compression-Ignition (CI) Engines – Exhaust Emission Standards.....	12-30
Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12-34
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12-36
Gasoline Sulfur Standards.....	12-38
Highway, Nonroad, Locomotive, and Marine (NRLM) Diesel Fuel Sulfur Standards.....	12-39
State	
Number of Alternative Refuel Sites by State and Fuel Type, 2014.....	6-13
Federal and State Alternative Fuel Incentives, 2014.....	10-12
Federal and State Advanced Technology Incentives, 2014.....	10-13
States	
U.S. Petroleum Imports, 1960-2013.....	1-8
Costs of Oil Dependence to the U.S. Economy, 1970-2012.....	1-12
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2012.....	1-14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2013.....	1-15
United States Petroleum Production, Imports and Exports, 1950-2013.....	1-16
United States Petroleum Production and Consumption – All Sectors, 1973-2040.....	1-18
United States Petroleum Production, and Transportation Consumption, 1970-2040.....	1-19
U. S. Consumption of Total Energy by End-Use Sector, 1973-2013.....	2-3

States (continued)

U.S. Cars and Trucks in Use, 1970–2012	3–6
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012)	3–7
Vehicles per Thousand People in the United States, 1990–2012	3–10
U.S. Average Vehicle Age, 1995–2013	3–14
New Retail Car Sales in the United States, 1970–2013	4–5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013	4–6
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4–36
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles	4–36
Value of Goods in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–22
Tons of Freight in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–23
Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–24
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–25
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–21
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2013	9–3
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton–Miles, 2012	9–8
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2013	10–20
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2012	11–4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11–5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990–2012	11–6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11–7

Stations

Conventional Refueling Stations, 1993–2012	4–18

Crude Oil Supplies, 1973-2013	1–10
Surveys	
Value of Goods in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–22
Tons of Freight in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–23
Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–24
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–25
Survival	
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years.....	3–16
Light Truck Scrappage and Survival Rates.....	3–17
Heavy Truck Scrappage and Survival Rates.....	3–18
Systems	
Energy Intensity of Light Rail Transit Systems, 2012	2–17
Energy Intensity of Commuter Rail Systems, 2012.....	2–18
Energy Intensity of Heavy Rail Systems, 2012.....	2–18

Systems (continued)	
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2012	9-8
Targets	
Fuel Economy and Carbon Dioxide Targets for Model Year 2025	4-20
Tax	
The Gas Guzzler Tax on New Cars.....	4-24
Tax Receipts from the Sale of Gas Guzzlers, 1980-2012.....	4-27
Taxes	
List of Model Year 2013 Cars with Gas Guzzler Taxes	4-25
Federal Excise Taxes on Motor Fuels, 2011	10-11
Technologies	
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies.....	11-11
Technology	
Alternative Fuel and Advanced Technology Vehicles and Characteristics	6-1
Federal and State Advanced Technology Incentives, 2014	10-13
Temperature	
Cold Temperature (Cold FTP) Driving Cycle.....	4-33
Ten	
Top Ten Natural Gas Producing Countries, 2012	6-15
Terrain	
Effect of Terrain on Class 8 Truck Fuel Economy	5-14
Thousand	
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012).....	3-7
Vehicles per Thousand People in Other Countries, 2002 and 2012.....	3-9
Vehicles per Thousand People in the United States, 1990-2012.....	3-10
Tier 2	
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12-16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards	12-17
Tier 3	
Tier 3 Non-Methane Organic Gases and Nitrogen Oxide Standards	12-14
Tier 3 Evaporative Emission Standards	12-15
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12-15
Time	
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012).....	3-7
Average Length of Time Commercial Fleet Vehicles are in Service, 2012.....	7-3
Workers by Commute Time, 1990, 2000, and 2011	8-22

Tire	
	Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination 5-15
	Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed..... 5-16
	Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination..... 5-17
Ton	
	Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys 5-24
Ton-Miles	
	Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2012 9-8
Tonnage	
	Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2012 9-5
Tons	
	Tons of Freight in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys 5-23
Top	
	Top Ten Natural Gas Producing Countries, 2012 6-15
Total	
	U. S. Consumption of Total Energy by End-Use Sector, 1973-2013 2-3
	Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed..... 5-16
	Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination..... 5-17
	Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012 11-5
	Total National Emissions of the Criteria Air Pollutants by Sector, 2013 12-2
	Total National Emissions of Carbon Monoxide, 1970-2013 12-3
	Total National Emissions of Nitrogen Oxides, 1970-2013 12-5
	Total National Emissions of Volatile Organic Compounds, 1970-2013 12-7
	Total National Emissions of Particulate Matter (PM-10), 1970-2013 12-9
	Total National Emissions of Particulate Matter (PM-2.5), 1990-2013 12-11
Totals	
	Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2013 9-3
Tractor-Trailer	
	Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination 5-15
	Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed..... 5-16
	Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination..... 5-17
Traffic	
	Intermodal Rail Traffic, 1965-2012..... 9-10

Transit	
Energy Intensity of Light Rail Transit Systems, 2012	2-17
Summary Statistics on Transit Buses and Trolleybuses, 1994-2012.....	5-26
Alternative Fuel Transit Vehicles, 2013	6-4
Summary Statistics for Rail Transit Operations, 1970-2012.....	9-13
Transportation	
Petroleum Production and Transportation Petroleum Consumption in Context, 1950-2013	1-17
United States Petroleum Production, and Transportation Consumption, 1970-2040.....	1-19
Highway Transportation Petroleum Consumption by Mode, 1970-2012.....	1-21
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2012	1-22
Transportation Petroleum Use by Mode, 2011-2012	1-23
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2012	2-7
Transportation Energy Use by Mode, 2011-2012	2-8
Highway Transportation Energy Consumption by Mode, 1970-2012	2-9
Nonhighway Transportation Energy Consumption by Mode, 1970-2012	2-10
Annual Household Expenditures for Transportation, 1985-2012	8-5
Means of Transportation to Work, 1980, 1990, 2000 and 2012	8-20
Transportation and the Economy	10-1
Transportation Services Index, January 1990-January 2014.....	10-2
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector.....	11-7
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2012.....	11-8
Transportation-Related	
Off-Highway Transportation-Related Fuel Consumption from the Nonroad Model, 2012.....	2-11
Transportation-Related Employment, 2000 and 2013	10-19
Travel	
Passenger Travel and Energy Use, 2012.....	2-14
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2012.....	7-3
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS.....	8-9
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8-16
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8-18
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-19
Traveled	
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2012	3-11
Distribution of Trucks over 26,000 lbs. by Vehicle-Miles Traveled	5-11
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5-16
Trip	
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-8
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS.....	8-10
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8-12
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8-15

Trip (continued)	
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-15
Walk and Bike Trips by Trip Purpose, 2009 NHTS	8-24
Long-Distance Trip Characteristics, 2001 NHTS	8-26
Trips	
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-8
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8-15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-15
Household Vehicle Trips, 2009 NHTS	8-17
Walk and Bike Trips by Trip Purpose, 2009 NHTS	8-24
Trolleybuses	
Summary Statistics on Transit Buses and Trolleybuses, 1994-2012.....	5-26
Truck	
Truck and Bus Registrations for Selected Countries, 1960-2012.....	3-4
Light Truck Scrappage and Survival Rates	3-17
Heavy Truck Scrappage and Survival Rates	3-18
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2013	4-22
New Retail Truck Sales by Gross Vehicle Weight, 1970-2013	5-4
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5-6
Truck Statistics by Gross Vehicle Weight Class, 2002.....	5-6
Truck Statistics by Size, 2002.....	5-7
Effect of Terrain on Class 8 Truck Fuel Economy	5-14
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed.....	5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination.....	5-17
Class 8 Truck Weight by Component	5-18
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12-16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards	12-17
California Car, Light Truck and Medium Truck Emission Certification Standards	12-23
Trucks	
World Production of Cars and Trucks, 2000-2012	3-2
U.S. Cars and Trucks in Use, 1970-2012	3-6
Trucks in Operation by Age, 1970, 2001, and 2013	3-13
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970-2012	4-3
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999	4-4
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks.....	4-4
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2013	4-6
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013.....	4-14
Summary Statistics for Class 3-8 Single-Unit Trucks, 1970-2012.....	5-2

Trucks (continued)	
Summary Statistics for Class 7-8 Combination Trucks, 1970–2012	5–3
Percentage of Trucks by Size Ranked by Major Use, 2002	5–8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5–9
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5–10
Distribution of Trucks over 26,000 lbs. by Vehicle-Miles Traveled	5–11
Share of Heavy Trucks with Selected Electronic Features, 2002	5–12
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5–15
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008.....	5–20
Electric Drive Medium/Heavy Trucks and Buses Available by Manufacturer, 2014.....	6–12
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013	11–14
Two-Axle	
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970–2012	4–3
Type	
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2012	2–7
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2012	3–11
Number of Alternative Refuel Sites by State and Fuel Type, 2014.....	6–13
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7–3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2012.....	7–4
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2012.....	7–6
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8–11
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–21
Unit	
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–21
Housing Unit Characteristics, 2010	8–21
United	
U.S. Petroleum Imports, 1960–2013.....	1–8
Costs of Oil Dependence to the U.S. Economy, 1970–2012	1–12
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2012	1–14
U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978–2013.....	1–15
United States Petroleum Production, Imports and Exports, 1950–2013.....	1–16
United States Petroleum Production and Consumption – All Sectors, 1973–2040	1–18
United States Petroleum Production, and Transportation Consumption, 1970–2040.....	1–19
U.S. Consumption of Total Energy by End-Use Sector, 1973–2013.....	2–3
U.S. Cars and Trucks in Use, 1970–2012	3–6
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012)	3–7
Vehicles per Thousand People in the United States, 1990–2012.....	3–10
U.S. Average Vehicle Age, 1995–2013	3–14
New Retail Car Sales in the United States, 1970–2013	4–5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013	4–6
Comparison of U.S., European, and Japanese Driving Cycles Attributes	4–36
Example of Differing Results Using the U.S., European, and Japanese Driving Cycles.....	4–36
Value of Goods in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–22
Tons of Freight in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–23

United (continued)	
Growth of Ton Miles in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–24
Average Miles per Shipment in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–25
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–21
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2013	9–3
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton–Miles, 2012	9–8
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2013	10–20
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2012	11–4
Total U.S. Greenhouse Gas Emissions by End-Use Sector, 2012	11–5
U.S. Carbon Emissions from Fossil Fuel Consumption by End-Use Sector, 1990–2012.....	11–6
U.S. Carbon Emissions from Fossil Fuel Combustion in the Transportation End-Use Sector	11–7
Urban	
Heavy-Duty Highway Compression-Ignition Engines and Urban Buses – Exhaust Emission Standards.....	12–18
US06	
High Speed (US06) Driving Cycle.....	4–34
Usage	
Highway Usage of Gasoline and Diesel, 1973–2012.....	2–13
Use	
Transportation Petroleum Use by Mode, 2011–2012	1–23
Transportation Energy Use by Mode, 2011–2012	2–8
Passenger Travel and Energy Use, 2012.....	2–14
U.S. Cars and Trucks in Use, 1970–2012	3–6
Percentage of Trucks by Size Ranked by Major Use, 2002.....	5–8
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5–10
Estimates of Alternative Fuel Highway Vehicles in Use, 1995–2011	6–3
Nonhighway Energy Use Shares, 1970–2012.....	9–2
Recreational Boat Energy Use, 1970–2012	9–7
Utility	
Definition of Car Sport Utility Vehicles in Model Year 2013	4–8
Value	
Value of Goods in the United States: Comparison of the 1997, 2002, 2007, and 2012 Commodity Flow Surveys	5–22
Various	
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies.....	11–11
Vehicle	
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2012	3–11
U.S. Average Vehicle Age, 1995–2013	3–14
New Retail Vehicle Sales, 1970–2013.....	3–15
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2013	4–6

Vehicle (continued)

Light Vehicle Production Shares, Model Years 1975–2013	4–12
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000, and 2012	4–16
New Light Vehicle Dealerships and Sales, 1970–2012	4–17
New Retail Truck Sales by Gross Vehicle Weight, 1970–2013	5–4
Truck Statistics by Gross Vehicle Weight Class, 2002.....	5–6
Gross Vehicle Weight vs. Empty Vehicle Weight	5–19
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008.....	5–20
Hybrid and Plug-In Vehicle Sales, 1999–2013.....	6–9
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7–3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2012.....	7–4
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2012	7–6
Population and Vehicle Profile, 1950–2012	8–2
Household Vehicle Ownership, 1960–2012 Census	8–6
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–8
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8–9
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8–11
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8–12
Average Annual Miles per Household Vehicle by Vehicle Age.....	8–13
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8–15
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8–15
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8–16
Household Vehicle Trips, 2009 NHTS	8–17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8–18
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8–18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–19
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–19
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–21
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2013	10–20
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies.....	11–11
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2013.....	11–15
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Exhaust Emission Standards.....	12–16
Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle – Tier 2 Evaporative Emission Standards	12–17

Vehicle-Miles

Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2012	3–11
Distribution of Trucks over 26,000 lbs. by Vehicle-Miles Traveled	5–11
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2012.....	7–3
Vehicles and Vehicle-Miles per Capita, 1950–2012.....	8–3
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–8

Vehicles

All Highway Vehicles Characteristics	3-1
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 2002 and 2012)	3-7
Vehicles per Thousand People in Other Countries, 2002 and 2012.....	3-9
Vehicles per Thousand People in the United States, 1990-2012.....	3-10
Light Vehicles and Characteristics.....	4-1
Definition of Car Sport Utility Vehicles in Model Year 2013	4-8
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013	4-10
Summary Statistics on Demand Response Vehicles, 1994-2012	4-37
Heavy Vehicles and Characteristics.....	5-1
Alternative Fuel and Advanced Technology Vehicles and Characteristics	6-1
Estimates of Alternative Fuel Highway Vehicles in Use, 1995-2011	6-3
Alternative Fuel Transit Vehicles, 2013	6-4
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-5
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-7
Electric Drive Vehicles Available by Manufacturer, Model Year 2014.....	6-10
Fleet Vehicles and Characteristics	7-1
Fleet Vehicles in Service as of January 1, 2013.....	7-2
Average Annual Vehicle-Miles of Travel for Commercial Fleet Vehicles, 2012.....	7-3
Average Length of Time Commercial Fleet Vehicles are in Service, 2012.....	7-3
Federal Government Vehicles, 2001-2012	7-5
Federal Government Vehicles by Agency, FY 2012	7-7
Household Vehicles and Characteristics	8-1
Vehicles and Vehicle-Miles per Capita, 1950-2012.....	8-3
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8-9
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8-16
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-18
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2013	10-20
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005.....	12-4
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005	12-6
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005.....	12-8
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005	12-12
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12-15
Nonroad Recreational Engines and Vehicles – Exhaust Emission Standards.....	12-36

Vessels

Marine Spark-Ignition Engines and Vessels – Exhaust Emission Standards.....	12-34
---	-------

Volatile

Total National Emissions of Volatile Organic Compounds, 1970-2013.....	12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005.....	12-8

Walk

Walk and Bike Trips by Trip Purpose, 2009 NHTS	8-24
--	------

Warming	
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2012	11-4
Waterborne	
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2012	9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2012.....	9-6
Weight	
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2013	4-6
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013	4-15
New Retail Truck Sales by Gross Vehicle Weight, 1970-2013	5-4
Truck Statistics by Gross Vehicle Weight Class, 2002.....	5-6
Class 8 Truck Weight by Component	5-18
Gross Vehicle Weight vs. Empty Vehicle Weight.....	5-19
Distribution of Class 8 Trucks by On-Road Vehicle Weight, 2008.....	5-20
Well-to-Wheel	
Well-to-Wheel Emissions for Various Fuels and Vehicle Technologies.....	11-11
Work	
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-15
Means of Transportation to Work, 1980, 1990, 2000 and 2012	8-20
Workers	
Workers by Commute Time, 1990, 2000, and 2011	8-22
World

World Carbon Dioxide Emissions, 1990 and 2013.....	11-2
Year	
Definition of Car Sport Utility Vehicles in Model Year 2013	4-8
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2025.....	4-19
Fuel Economy and Carbon Dioxide Targets for Model Year 2025	4-20
List of Model Year 2013 Cars with Gas Guzzler Taxes	4-25
E85 Flex-Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-5
Non-E85 Alternative Fuel Vehicles Available by Manufacturer, Model Year 2014.....	6-7
Electric Drive Vehicles Available by Manufacturer, Model Year 2014.....	6-10
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2012	7-3
Fixed Car Operating Costs per Year, 1975-2013	10-17
Tier 3 Particulate Matter Emission Standards for Light Gasoline Vehicles, MY 2017 and Beyond.....	12-15

Years

Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years.....	3-16
Production Sales, Production Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2013.....	4-7
Production, Production Shares, and Production-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2013.....	4-9
Production and Production-Weighted Fuel Economies of New Domestic and Import Cars, Light Trucks, and Light Vehicles, Model Years 1975-2013.....	4-10
Light Vehicle Production Shares, Model Years 1975-2013.....	4-12
Production-Weighted Engine Size of New Domestic and Import Cars, Model Years 1975-2013.....	4-13
Production-Weighted Engine Size of New Domestic and Import Light Trucks, Model Years 1975-2013.....	4-14
Production-Weighted Curb Weight of New Domestic and Import Cars, Model Years 1975-2013.....	4-15
Average Material Consumption for a Domestic Light Vehicle, Model Years 1995, 2000, and 2012.....	4-16
Production-Weighted Annual Carbon Footprint of New Domestic and Import Cars, Model Years 1975-2013.....	11-13
Production-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks, Model Years 1975-2013.....	11-14

Yield

U.S. Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978-2013.....	1-15
