<b>APPENDIX A – FLASH CARD - INCOME</b> .....	93
<b>APPENDIX B – QUESTIONNAIRES</b> .....	95
<b>APPENDIX C – DETAILED TABULATIONS</b> .....	105
<b>AGE &amp; SEX</b>	
1.1 Population by Single Year of Age and Parish.....	106
1.2 Male Population by Single Year of Age and Parish .....	108
1.3 Female Population by Single Year of Age and Parish.....	110
1.4 Population by Five-Year Age Group, Sex and Parish.....	112
<b>RACE</b>	
2.1 Population by Five-Year Age Group, Race and Sex.....	113

2.2. Population by Parish, Race and Sex .....	114
2.3 Population by Race, Nativity and Bermudian Status .....	115
<b>BERMUDIAN STATUS</b>	
3.1 Bermudian Population by Single Year of Age and Parish .....	116
3.2 Bermudian Male Population by Single Year of Age and Parish .....	118
3.3 Bermudian Female Population by Single Year of Age and Parish .....	120
3.4 Bermudian Population by Five-Year Age Group and Parish .....	122
3.5 Bermudian Population by Five-Year Age Group, Race and Sex .....	123
3.6 Non-Bermudian Population by Single Year of Age and Parish .....	124
3.7 Non-Bermudian Male Population by Single Year of Age and Parish .....	126
3.8 Non-Bermudian Female Population by Single Year of Age and Parish .....	128
3.9 Non-Bermudian Population by Five-Year Age Group and Parish .....	130
3.10 Non-Bermudian Population by Five-Year Age Group, Race and Sex .....	131
<b>NATIVITY</b>	
4.1 Population by Nativity, Parish and Sex .....	132
4.2 Bermuda-Born Population by Five-Year Age Group, Race and Sex .....	133
4.3 Bermuda-Born Population by Five Year Age Group, Race and Bermudian Status .....	134
4.4 Foreign-Born Population by Five-Year Age Group, Race and Sex.....	135
4.5 Foreign-Born Population by Country of Birth and Sex .....	136
<b>HEALTH INSURANCE</b>	
5.1 Type of Health Insurance Coverage by Five-Year Age Group and Bermudian Status .....	140
5.2 Type of Health Insurance Coverage by Five-Year Age Group and Sex .....	141
5.3 Type of Health Insurance Coverage by Five-Year Age Group and Race .....	142
5.4 Health Insurance Status of the Working Population 16 Years and Over by Selected Age Group and Occupational Group .....	144
5.5 Health Insurance Status of the Working Population 16 Years and Over by Selected Age Group and Industrial Group .....	150
5.6 Health Insurance Status of the Non-Working Population 16 Years and Over by Selected Age Group and Sex .....	159
<b>IMMIGRATION</b>	
6.1 Bermuda-Born Immigrant Population by Five-Year Age Group and Duration of Residence Since Last Returned to Live in Bermuda .....	160
6.2 Bermuda-Born Immigrant Population by Duration of Residence Since Last Returned to Live in Bermuda and Race .....	161

6.3 Bermuda-Born Immigrant Population by Duration of Residence Since Last Returned to Live in Bermuda and Sex .....	162
6.4 Bermuda-Born Immigrant Population by Duration of Residence Since Last Returned to Live in Bermuda and Bermudian Status .....	163
6.5 Foreign-Born Immigrant Population by Five-Year Age Group and Duration of Residence Since Last Arrival to Live in Bermuda .....	164
6.6 Foreign-Born Immigrant Population by Duration of Residence Since Last Arrival to Live in Bermuda and Race .....	165
6.7 Foreign-Born Immigrant Population by Duration of Residence Since Last Arrival to Live in Bermuda and Sex .....	166
6.8 Foreign-Born Immigrant Population by Duration of Residence Since Last Arrival to Live in Bermuda and Bermudian Status.....	167
<b>EMIGRATION</b>	
7.1 Emigrants by Five-Year Age Group and Sex .....	168
7.2 Emigrants by Five-Year Age Group and Year of Emigration.....	169
7.3 Emigrants by Five-Year Age Group and Race .....	170
7.4 Emigrants by Year of Emigration and Bermudian Status.....	171
<b>MARITAL STATUS</b>	
8.1 Population 15 Years and Over by Five-Year Age Group, Marital Status and Sex .....	172
8.2 Population 15 Years and Over by Five-Year Age Group, Marital Status and Bermudian Status.....	173
8.3 Population 15 Years and Over by Five-Year Age Group, Marital Status and by Race.....	175
<b>FERTILITY</b>	
9.1 Female Population 15-49 Years by Five-Year Age Group, Number of Live Births in the Past Year and Race of Mother .....	178
9.2 Female Population 15-49 Years by Five-Year Age Group, Number of Live Births in the Past Year and Bermudian Status of Mother .....	179
<b>EDUCATION</b>	
10.1 Population 16 Years and Over by Highest Academic Qualification, Selected Age Group and Sex..	180
10.2 Population 16 Years and Over by Highest Academic Qualification, Race and Sex .....	181
10.3 Population 16 Years and Over by Highest Academic Qualification, Bermudian Status and Sex.....	182
<b>ECONOMIC ACTIVITY</b>	
11.1 Population 16 Years and Over by Main Economic Activity, Parish and Sex.....	183
11.2 Population 16 Years and Over by Main Economic Activity, Race and Sex.....	184
11.3 Population 16 Years and Over by Main Economic Activity, Bermudian Status and Sex .....	185
11.4 Labour Force 16 Years and Over by Selected Age Group, Parish and Sex .....	186
11.5 Working Population 16 Years and Over by Occupational Group, Number of Months Worked and Sex .....	187

11.6 Working Population 16 Years and Over by Occupational Group, Race and Sex .....	188
11.7 Working Population 16 Years and Over by Occupational Group, Number of Hours Worked in Main Job and Sex .....	189
11.8 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Senior Officials and Managers Occupational Group .....	190
11.9 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Professionals Occupational Group .....	191
11.10 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Technicians and Associate Professionals Occupational Group.....	194
11.11 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Clerks Occupational Group.....	196
11.12 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Service Workers and Shop and Market Sales Workers Occupational Group.....	197
11.13 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Skilled Agricultural and Fishery Workers Occupational Group.....	198
11.14 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Craft and Related Trade Workers Occupational Group.....	199
11.15 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Plant and Machine Operators and Assemblers Occupational Group.....	201
11.16 Working Population 16 Years and Over by Specific Occupation and Bermudian Status within the Elementary Occupational Group.....	202
11.17 Working Population 16 Years and Over by Industrial Group, Number of Months Worked and Sex .....	203
11.18 Working Population 16 Years and Over by Industrial Group, Occupational Group and Race .....	204
11.19 Working Population 16 Years and Over by Industrial Group, Bermudian Status and Sex.....	206
11.20 Working Population 16 Years and Over by Industrial Group, Race and Sex.....	207

## **INCOME**

12.1 Annual Household Gross Income for Population 16 Years and Over by Parish .....	208
12.2 Annual Household Gross Income for Population 16 Years and Over by Household Type .....	209
12.3 Annual Personal Gross Income for Population 16 Years and Over by Parish and Sex .....	210
12.4 Annual Personal Gross Income for Population 16 Years and Over by Race and Bermudian Status .....	212
12.5 Working Population 16 Years and Over by Annual Gross Income from Main Job, Number of Months Worked and Sex .....	215
12.6 Full-Time Working Population 16 Years and Over by Annual Gross Income from Main Job, Parish and Sex.....	217
12.7 Full-Time Working Population 16 Years and Over by Annual Gross Income from Main Job, Race and Bermudian Status .....	219

12.8 Full-Time Working Population 16 Years and Over by Annual Median Gross Income from Main Job by Occupational Group, Race and Sex .....	222
12.9 Full-Time Working Population 16 Years and Over by Annual Median Gross Income from Main Job by Occupational Group, Bermudian Status and Sex .....	224
12.10 Full-Time Working Population 16 Years and Over by Annual Median Gross Income from Main Job by Specific Occupation .....	226
12.11 Full-Time Working Population 16 Years and Over by Annual Median Gross Income from Main Job, Highest Academic Qualification, Bermudian Status and Sex .....	240
12.12 Full-Time Working Population 16 Years and Over by Annual Median Gross Income from Main Job, Highest Academic Qualification, Race and Sex .....	242

## HOUSING

13.1 Dwelling Units by Type of Building and Parish .....	244
13.2 Private Dwelling Units by Number of Bedrooms, Household Size and Parish .....	245
13.3 Private Dwelling Units by Number of Bathrooms, Household Size and Parish .....	247
13.4 Private Dwelling Units by Number of Bedrooms and Number of Full Bathrooms .....	249
13.5 Private Dwelling Units by Type of Tenure, Number of Full Bathrooms and Parish .....	250
13.6 Private Dwelling Units by Type of Tenure, Number of Bedrooms and Parish .....	251
13.7 Rented Private Dwelling Units by Monthly Rent and Number of Bedrooms .....	253
13.8 Rented Private Dwelling Units by of Monthly Rent and Type of Building .....	254
13.9 Owner-Occupied Private Dwelling Units by Monthly Mortgage and Number of Bedrooms .....	255
13.10 Owner-Occupied Private Dwelling Units by Monthly Mortgage and Type of Building .....	256

## HOUSEHOLDS

14.1 Household Type by Selected Age Group and Sex of Household Reference Person .....	257
14.2 Households by Selected Age Group, Highest Academic Qualification and Sex of Household Reference Person .....	258
14.3 Households Headed by Bermudian Household Reference Persons by Household Type, Race and Sex of Household Reference Person .....	259
14.4 Households Headed by Non-Bermudian Household Reference Persons by Household Type, Race and Sex of Household Reference Person .....	260

## CONSTITUENCY

15.1 Population by Bermudian Status, Race and Constituency .....	261
15.2 Bermudian Population 18 Years and Over by Race, Sex and Constituency .....	264
15.3 Bermudian Population 18 Years and Over by Age Group, Sex and Constituency .....	267

## PREFACE

The 2016 Population and Housing Census marks the shortest interval between censuses in Bermuda's history. Bermuda's most recent census was launched on May 20, 2016 in alignment with the *Statistics (Census of Population and Housing) Order 2016*. A census is the largest project conducted by the Department of Statistics (DOS) and required the use of all of the department's human resources in some capacity. However, a core Census Planning Team (CPT) was responsible for developing the strategy to complete the 2016 Census. The CPT comprised Mrs. Melinda Williams (Director); Mr. Ron Farier, Mr. Steven Holdipp, and Mr. Andrew Simpson (Statisticians); Mr. Vincent Williams-Savery (Statistician Designate); and Mrs. Dhwanna Denwiddie Burrows, Mr. Jabbar Jackson, Mr. Andrew Robinson, Ms. Judy Tacklyn and Mrs. Stephanie Tankard (Assistant Statisticians). The contributions of CPT members, CPT minute recorders, CPT subcommittee members, In-house Census Officers, Editor and Coder and Interviewers are acknowledged gratefully. Our collective sacrifice, dedication and teamwork contributed to a 98% pre-imputation completion rate. It cannot be overstated that the collaboration and cooperation of businesses, Government departments, quangos and the general public was vital and thus I thank all corporate and individual partners and data providers.

Censuses provide an invaluable snapshot of the profile of a country's people and housing stock at a particular point in time. As such, the 2016 Census data is an excellent resource for research, study, business, forward planning and evidence-based decision making to help shape our community's future. Any user who requires advice, assistance or clarification on any of the tabulations in this report is encouraged to contact the DOS.

Melinda Williams  
Director of Statistics  
April 9, 2018

## LIST OF ABBREVIATIONS

CAPI	Computer Assisted Personal Interviewer
CATI	Computer Assisted Telephone Interviewer
CD	Census District
CPT	Census Planning Team
DOS	Department of Statistics
HRP	Household Reference Person
NEC	Not Elsewhere Classified

## CONCEPTS AND DEFINITIONS

### Age

Age is the length of time a person has been alive, measured in completed years. It was measured as the difference between date of birth and Census Day, May 20, 2016.

### Average Household Size

Average household size is calculated by dividing the total de jure civilian non-institutional population by the total number of households.

$$\frac{\text{Total De Jure Civilian Non-Institutional Population}}{\text{Total Number of Households}}$$

### Bedroom

The room or rooms contained in a dwelling that was designed for sleeping, regardless of how the room was used. A bedroom must have a window and be able to contain an adult twin bed. Studio apartments, in which the living and sleeping areas are contained in the same room, are deemed to have no bedrooms in order to distinguish such dwellings from those which do have one purpose-built bedroom.

### Bermuda

Bermuda is located in the North Atlantic Ocean, near the western edge of the Sargasso Sea, roughly 580 nautical miles (1,070 km, 670 mi) east-southeast of Cape Hatteras on the Outer Banks of North Carolina. Although usually referred to in the singular, the British Overseas Territory consists of approximately 138 islands (Bermuda Parliament, No Date).

For census purposes, Bermuda is considered to be 100% urban.

### Bermudian Population

This is a sub-group of the total population and includes only persons who have or are deemed to have Bermudian status either by birth, grant or marriage. Persons in this sub-group include persons born in Bermuda (Bermuda born) as well as persons born in other countries (foreign born) who have acquired Bermudian status.

### Census Day

The reference date to which the majority of census questions refer. In 2016, Census Day was Friday, May 20, 2016.

### Census District

A Census District (CD) is a geographic region defined for the purpose of taking a census. There were 245 CD's in the 2016 Census.

### Census Night

The reference night that was used to determine whether a person was in Bermuda or abroad, for census purposes, was the period between sunset and 11:59 p.m. on Friday, May 20, 2016.

### Civilian Non-Institutional Population

The civilian non-institutional population includes persons who usually, for six months or more, reside in Bermuda irrespective of where they were physically on Census Night. As such, residents temporarily overseas for vacation, business, school or other purposes are included. It excludes overseas visitors, the institutional population and the non-sheltered population.

### **Completion Rate**

This is the total number of assessment numbers counted in the census divided by the total number of assessment numbers multiplied by 100.

$$\frac{\text{Total Number of Assessment Numbers Counted in the Census}}{\text{Total Number of Assessment Numbers}} \times 100$$

### **Constituency**

A constituency is one of the official political boundaries to elect a representative for the constituency in parliament. Bermuda had 36 political constituencies.

### **De Facto Population**

The de facto population refers to all persons who were physically present in Bermuda on Census Night. It includes the civilian non-institutional population, overseas visitors and transients, the institutional population and the non-sheltered population.

### **De Jure Population**

The de jure population refers to persons who have lived, or are expected to live, in Bermuda for six months or more as of Census Day irrespective of where they were physically present on Census Night. As such, residents present on Census Night and temporarily overseas for vacation, business, school or other purposes are included. It excludes overseas visitors and the institutional population.

### **Dwelling Unit**

Dwelling units include private dwelling units, group dwelling units and other dwelling units (boats).

### **Emigrant**

An emigrant is a person who leaves one country with the intent to settle in another for a period of at least one year. A student who has gone abroad to study for a specific period or a person seeking medical attention or on vacation (even an extended vacation) is not considered an emigrant.

### **Employed/ Working Population**

Persons were employed or part of the working population if they were 16 years and over and if, during the week of May 13 to 19, 2016, they either: worked for pay or payment in kind. The working population also includes persons who had a job but were not at work due to vacation, sick leave, maternity leave, etc.

### **Full Bathroom**

A full bathroom must have a sink, toilet and a shower or bathtub. Two half bathrooms do not qualify as one full bathroom.

### **Gross Income**

Gross income refers to income from wages and/or salaries before deductions, such as pension, health insurance, union dues, etc.

### **Group Dwelling Unit**

This is a dwelling unit where the occupants live collectively for disciplinary, health, custodial, work or other reasons and share the cooking, sleeping and/or sanitary facilities with other households. Generally, group dwellings are available primarily to selected persons, not the general population. They differ from institutions in that occupants' movements to and from the premises are less restricted.

Examples of group dwellings include hotel staff quarters, transitional housing, police barracks and rooming houses catering for six or more paying guests as well as Mid-Atlantic Wellness Institute group homes catering to any number of clients.

### **Highest Academic Qualification**

Highest academic qualification refers to an individual's success which is verified by the receipt of a certificate as of Census Day. The range of academic achievement is from none (no formal certificate) to post-graduate degree. Professional designations such as Certified Public Accountant and Chartered Financial Analyst are excluded.

### **Hours Worked in Main Job**

Hours worked in main job is the total number of hours usually worked in a main job each week by a person 16 years and over and includes paid or unpaid overtime.

### **Household**

A household is a person or group of persons living together in a dwelling unit.

### **Household Reference Person**

The Household Reference Person (HRP) is the person 18 years and over who carries the main responsibility of the household's affairs. In the case of a group of unrelated persons sharing a dwelling on an equal basis, the person whom the others acknowledge as the HRP is accepted as such for census purposes.

### **Household Type**

Household type refers to the classification of households into categories based on the relationships of household members to others as outlined below:

1. One person

#### ***Nuclear Households***

2. Married couple
3. Father with child(ren)
4. Mother with child(ren)
5. Adult child/children with live-in parent(s) (adult child is not married, legally separated or living with a partner)

#### ***Extended Households (All Members Related):***

6. One or more nuclear families with or without other persons related to the nucleus
7. Adult child with live-in parent(s) with other persons related to the nucleus
8. Grandchild(ren) (under 18 years) living with grandparent(s) with or without other relatives under 18 years, for example, niece/step child
9. Other relatives, for example uncle, aunt, cousins

#### ***Composite Household (Not All Members Related):***

10. Unmarried couple with or without their children plus other persons
11. Unmarried couple with or without their children
12. Grandchild(ren) (under 18 years old) living with grandparent(s) with or without other relatives plus other person(s) not related to nucleus
13. Related and non-related persons
14. Other non-related persons, for example roommates, live-in partner or foster child

## Immigrant

An immigrant is a person who enters a country after residing in another with the intent of taking up residence for six months or more.

## Imputation

A statistical technique for assigning reasonable values for inconsistent, poor quality or missing data. For the 2016 Census, a donor imputation method was used for household non-response and donor imputation and administrative resources were used for item imputation.

## Income

Income includes:

- **Income from Main Job:** gross income from wages, salaries, tips, bonuses and commissions and net earnings from self-employment.
- **Income from All Other Sources:** regular income from other jobs, pensions, annuities, dividends, rents, child support, alimony, financial assistance, scholarships, etc. It excludes one-time income receipts, such as lottery winnings, inheritances, etc.

Income was collected in actual dollar amounts or in ranges. The weekly, monthly and annual ranges are outlined on the Flash Card in Appendix A.

## Industry

This is the main type of activity undertaken by the organization, enterprise, business, or unit of economic activity that employs one or more people aged 16 years and over.

## Institutional Population

The institutional population refers to the inmates of correctional facilities and youth detention centres, persons in homes for the aged, long-stay hospital patients, persons in the hospice and those in adult shelters and children's homes.

## Institutions

These are group dwellings where occupants' movements are restricted such as correctional facilities, hospices, hospitals, youth detention centres, children's homes and senior citizens' homes.

## Intercensal Period

This is the period between two censuses. The previous two intercensal periods were May 21, 2000 to May 20, 2010 and May 21, 2010 to May 20, 2016.

## Labour Force/ Economically Active Population

These terms refer to the body of persons 16 years and over who furnish the supply of labour for the production of economic goods and services whether they are working or looking for work.

It includes only persons 16 years and over who were either employed or actively sought work (inclusive of students irrespective of education level) during the week preceding Census Day, May 13 to 19, 2016. Hence, the labour force is a combination of two groups: those who were employed (the working population); and, those without a job who were actively seeking work (the unemployed population).

## Labour Force Participation Rate

The labour force participation rate is the percentage of the population 16 to 64 years who were either employed or unemployed.

$$\frac{\text{Labour Force 16 to 64 Years}}{\text{Population 16 to 64 Years}} \times 100$$

### **Main Job**

A person's main job is one where he or she receives health insurance and pension benefits.

### **Marital Status**

This refers to the state of being never married, married, widowed, divorced or legally separated.

### **Median**

The median is the value which divides a distribution into two equal groups, half having values above the median and half having values below the median.

### **Municipality**

A municipality is a town or city which has incorporated status and powers of self-governance. There were two municipalities in Bermuda: the City of Hamilton in Pembroke Parish and the Town of St. George's in St. George's Parish.

### **Nativity**

Nativity refers to a person's country of birth.

### **Non-Bermudian Population**

This is a sub-group of the total population and refers to all persons who do not have Bermudian status. Persons in this sub-group include persons born in Bermuda (Bermuda born) as well as persons born in other countries (foreign born) but who have not acquired Bermudian status. The three categories of non-Bermudian are Permanent Resident Certificate Holder, Non-Bermudian Spouse of a Bermudian and Other Non-Bermudian.

### **Non-Sheltered Population**

The non-sheltered population are those who have no fixed abode and who do not stay in adult shelters. These persons have no habitable dwelling to call home and usually sleep outdoors in places such as entrances to buildings, bus shelters, vehicles and derelict buildings. The non-sheltered form part of the de jure population but are excluded from the civilian non institutional population analysis.

### **Not in the Labour Force/ Economically Inactive**

These terms refer to any person of working age (16 years and over) who was neither employed nor unemployed (e.g. retired, not actively seeking work, engaged in home duties, etc.)

### **Not Stated**

The category 'not stated' is used exclusively where a person has not provided any response to the question asked.

### **Not Elsewhere Classified**

Not elsewhere classified (NEC) is a residual category for responses that have no appropriate category.

### **Occupation**

An occupation is a set of jobs that require the performance of similar or identical sets of tasks by employed people 16 years and over.

### Old Age Dependency Ratio

The old age dependency ratio is the ratio of the population 65 years and over to the population 15 to 64 years.

$$\frac{\text{Population 65 Years and Older}}{\text{Population 15 to 64 Years}} \times 100$$

### Overseas Visitor and Transient Population

The overseas visitor and transient population comprises people who were in Bermuda on Census Night but resided overseas for six months or more.

### Parish

A parish is an area of land with each containing a Parish Council. There are nine parishes in Bermuda and they are listed as follows from east to west: St. George's, Hamilton, Smith's, Devonshire, Pembroke, Paget, Warwick, Southampton and Sandys.

### Payment in Kind

Payment in kind refers to payment in a form other than money, such as goods or accommodations.

### Population

The term population refers to the de jure civilian non-institutional population.

### Population Density

Population density is a measure of the average population per unit of land area. It is calculated by dividing the de jure civilian non-institutional population by the total land area. Bermuda's land area as of 2010 was 21.01 square miles and as of 2016 was 20.68 square miles (source: Department of Land Title and Registration January 26 2018).

$$\frac{\text{De Jure Civilian Non-Institutional Population}}{\text{Total Land Area}}$$

### Private Dwelling Unit

A private dwelling unit is a room or group of rooms used, or intended to be used, for living purposes. It must be capable of permanent human habitation and must have its own:

- separate access to the street or common landing or staircase, and,
- cooking, living, sleeping and sanitary facilities which the occupants of the dwelling do not have to share with any persons other than their own household members.

From a structural perspective, a private dwelling may be contained within a one-unit dwelling, a house comprising two or more apartments, an apartment building, or within part of a building which is used for residential as well as business or other purposes.

### Relationship to Household Reference Person

Relationship to HRP indicates the kind of relationship each person in a household has to the HRP.

### Sex

Sex is the distinction between males and females based on the biological differences in sexual characteristics.

### Sex Ratio

The sex ratio is the number of males per 100 females.

$$\frac{\text{Number of Males}}{\text{Number of Females}} \times 100$$

### Tenure

Tenure refers to the household's occupancy arrangement for the private dwelling unit (e.g. owner-occupied or non-owner occupied).

### Total Dependency Ratio

The total dependency ratio is the ratio of the population under 15 years and 65 years and over to the population 15 to 64 years.

$$\frac{\text{Population Under 15 years} + \text{Population 65 Years and Older}}{\text{Population 15 to 64 Years}} \times 100$$

### Total Household Income

Total household income is collective income from all sources received for the year ending on Census Day for all persons 16 years and over in a household.

### Total Personal Income

Total personal income is collective income from all sources a person 16 years and over received for the year ending on Census Day.

### Unemployed

The unemployed comprise all persons 16 years and over who during the week prior to Census Day were without work but were actively seeking work.

### Unemployment Rate

The unemployment rate is the number of unemployed people as a percentage of the labour force.

$$\frac{\text{Unemployed 16 Years and Over}}{\text{Labour Force 16 Years and Over}} \times 100$$

### Usual Residence

Usual residence is the dwelling that a person regards as his or her home and is the place where the person sleeps the majority of the time.

### Usual Resident

A usual resident is a person who has lived, or is expected to live, in Bermuda for six months or more as of Census Day irrespective of where they were physically on Census Day.

### Vacant Dwelling

This is a habitable dwelling that has no legal occupants. Examples are:

- unoccupied dwelling available for rent or lease;
- unoccupied dwelling available for sale;
- a dwelling unit that is held empty pending the settlement of litigation;
- and a dwelling unit held empty for other reasons.

Dwelling units whose occupants were temporarily away/ abroad at the time of the census were not classified as “vacant”, nor were the empty homes/ apartments of non-resident owners classified as such.

### **Vacation Home**

This is a private dwelling unit where the occupants live for less than six months a year.

### **Visitor**

A visitor to a dwelling is a person who was present in a dwelling on Census Night but does not usually reside there.

### **Youth Dependency Ratio**

The youth dependency ratio is the ratio of the population under 15 years to the population 15 to 64 years.

$$\frac{\text{Population Under 15 Years}}{\text{Population 15 to 64 Years}} \times 100$$

## TECHNICAL NOTE

### Coverage and Completion Rate

During the undertaking of every census, interviewers are dependent on household respondents to provide the correct information in response to questions asked on the questionnaire. Also, household members often respond to the census on behalf of other persons who live in the same household who are not available or are difficult to contact. In this regard, there will always be a degree of partial response, non-response or undercounting. Similar to previous censuses, the 2016 Census was susceptible to these occurrences.

#### **2016 Census**

In the 2016 Census, all households were sent letters, called and/or visited giving a 100% coverage rate. The pre-imputation completion rate was 98%, leading to 827 households that were not completed. In order to achieve a complete data set for all households, data was imputed for these missing households. In cases of partially completed households, data was also imputed for some variables.

#### **2010 Census**

After the official deadline for the 2010 Census enumeration period, persons representing 182 households contacted the DOS for members of their households to be counted. These persons responded to a minimal number of questions asked of them on behalf of 413 additional persons. Therefore, the census data will show a degree of partial or non-response for these households.

At the end of the census data collection period, a 100% coverage rate was achieved with a pre-imputation completion rate of 87%. There were roughly 4,400 households for which data had not been obtained. In alignment with statistical best practices, administrative data sources were utilized to reduce the undercount and to impute important demographic data items, such as age, sex, date of birth, Bermudian status, employment and race. As a result, census records for 1,106 households comprising 2,551 persons were imputed only for these demographic data items. The imputation reduced the undercount of outstanding households. However, data items for the remaining census questions were not imputed for 1,106 households. After the imputation, 3,321 households were not accounted for. These households comprised a combination of vacation homes, occupied and vacant dwelling units.

### Limitations and Comparability

#### **Imputations**

The imputation process differed between the 2010 Census and 2016 Census resulting in lower levels of non-response in the 2016 Census. Intercensal changes reflect a combination of real change and change as a result of lower non-response for the 2016 Census. Therefore, users are cautioned not to calculate changes in absolute numbers or intercensal percentage changes of absolute numbers to compare the civilian non-institutional population and private dwelling units. Percentage point changes are recommended for comparison purposes. With the exception of population density, statistical indicators using means, medians, rates and ratios are not affected by these limitations and are comparable.

The data for the institutional, non-sheltered and group dwelling populations are comparable with the 2010 Census data as they were not subject to differing imputation methodologies. Percentage point changes were used primarily to analyse these populations due to the small numbers.

#### **Migration**

The immigration statistics on duration of residence since last return/ arrival to live in Bermuda are based on a calendar year of last return/ arrival. Therefore, the duration of residence statistics are approximations as it is unknown whether the last return/ arrival was before or after May 20 for any calendar year.

The emigration and immigration statistics are not comparable due to the limitations of the emigration data. The census information collected on emigrants was proxy data; information was provided on behalf of the emigrant by a household member. The main limitation of the 2010 and 2016 Census emigration data is that it was unable to capture situations where entire households left the island, as there was no one to provide this information. In addition, if all of the household members of an emigrant moved to another household in Bermuda, the information about the emigrant would not likely have been collected.

### ***Fertility***

Due to a change in questionnaire design between the 2010 Census and 2016 Census, the fertility data is not comparable. Therefore, 2010 Census fertility data is omitted from this report. Furthermore, the number of live births does not align with the number of live births reported by the Registry General Department for three reasons. Firstly, the reporting period for the census is May 21, 2015 to May 20, 2016 whereas the Registry General Department reports live births by calendar year. Secondly, the census data includes live births to residents regardless of whether the birth occurred in Bermuda or overseas, unlike the Registry General Department which reports on residents' live births that occur in Bermuda. Finally, live births reported in the census could possibly include unregistered live births whereas the Registry General Department reports on registered live births only.

### ***Working Population***

The working population from censuses is not comparable with the annual Employment Survey as the census collects information on main jobs while the Employment Survey collects information on all jobs. In addition, the reference period for the census differs from the Employment Survey.

### ***Income***

In 2016, steps were taken to improve the quality of the income data by collecting exact values and income ranges. In order to facilitate comparisons with the 2010 Census income data collected only in income ranges, exact values collected in 2016 were assigned to income ranges. The collection of income data using exact values and income ranges in the next census will allow for future comparisons to be made with the benchmark 2016 Census income data.

### ***Household Reference Person***

Tables relating to households by the characteristics of the Household Reference Person (HRP) may not represent the characteristics of the entire household. In other words, household members may have the same characteristics as the HRP or may possess different characteristics. For example, the HRP may be black and the spouse may be white.

### **Percentage Distribution Revisions and Calculations**

The 2016 data contained within this report includes updated figures and supersedes the preliminary results completed in December 2017. This report includes updated 2010 Census tabulations and analyses that supersedes the corresponding data within the 2010 Census Population and Housing Report Revised.

A new methodology has been adopted in the calculation of percentage distributions adapted from Statistics New Zealand's 2013 Census data user guide (page 19). Percentage distributions are now calculated based on the total number of observations excluding non-response and not stated values. The benefit of excluding non-response and not stated values as response options in percentage distribution calculations is that it allows for more accurate intercensal comparisons between response categories.

**Note:** In some tables, percentages may not add to totals due to rounding.

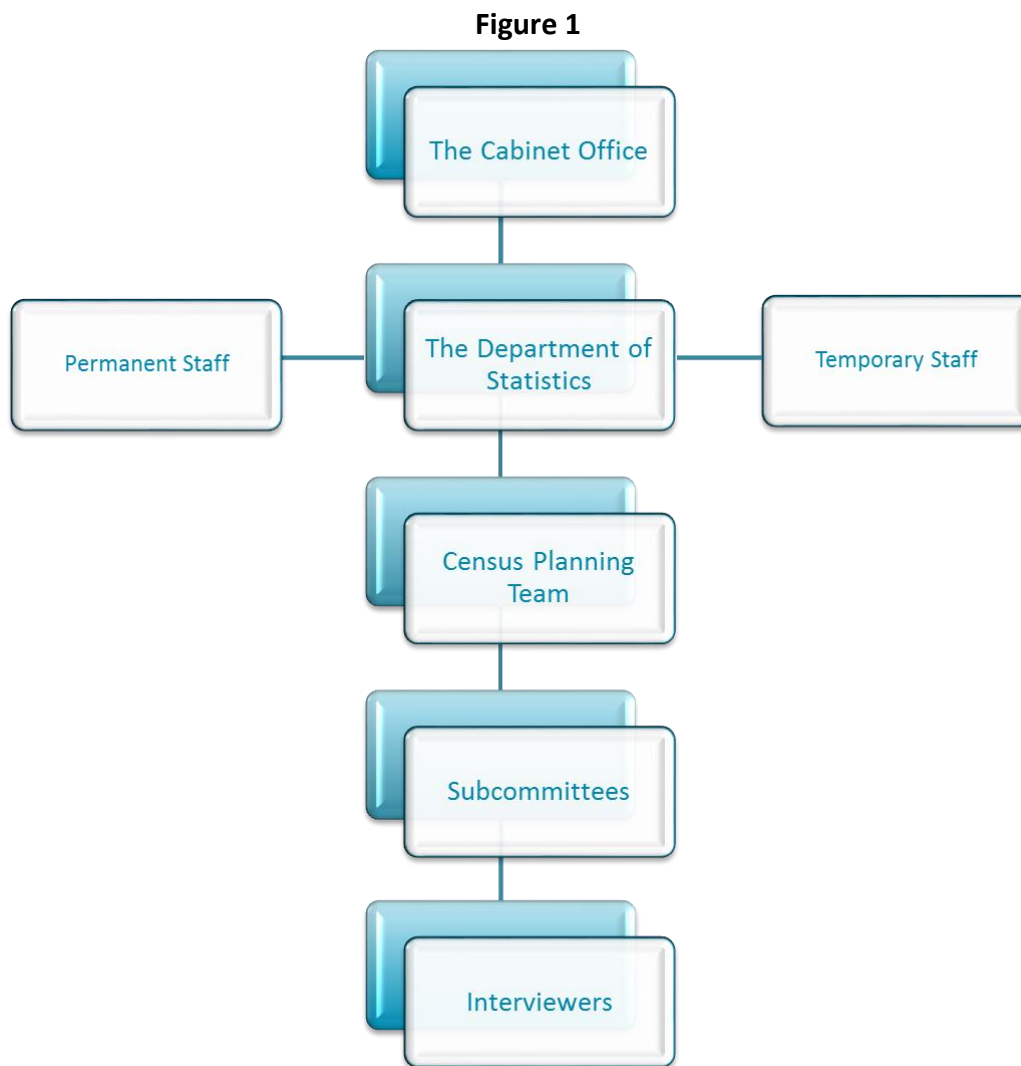

## ADMINISTRATION

### Planning

The process of conducting the 2016 Census began by establishing a CPT that conceptualized and implemented a project plan, developed the budget and acquired the required resources for the census. The project plan was informed largely by researching international best practices, soliciting input from major stakeholders and addressing recommendations from the 2010 Census. A census pre-test was conducted in 2014 to fine-tune the major census phases. Feedback from the pre-test was used to refine the processes for the 2016 Census. Under the guidance of the Ministry of the Cabinet Office and the Director of Statistics, the CPT bore the main responsibility for organizing and overseeing the day-to-day census operations. The CPT was supported by 4 subcommittees comprised of staff members who assisted the subcommittee leaders. The teams were as follows:

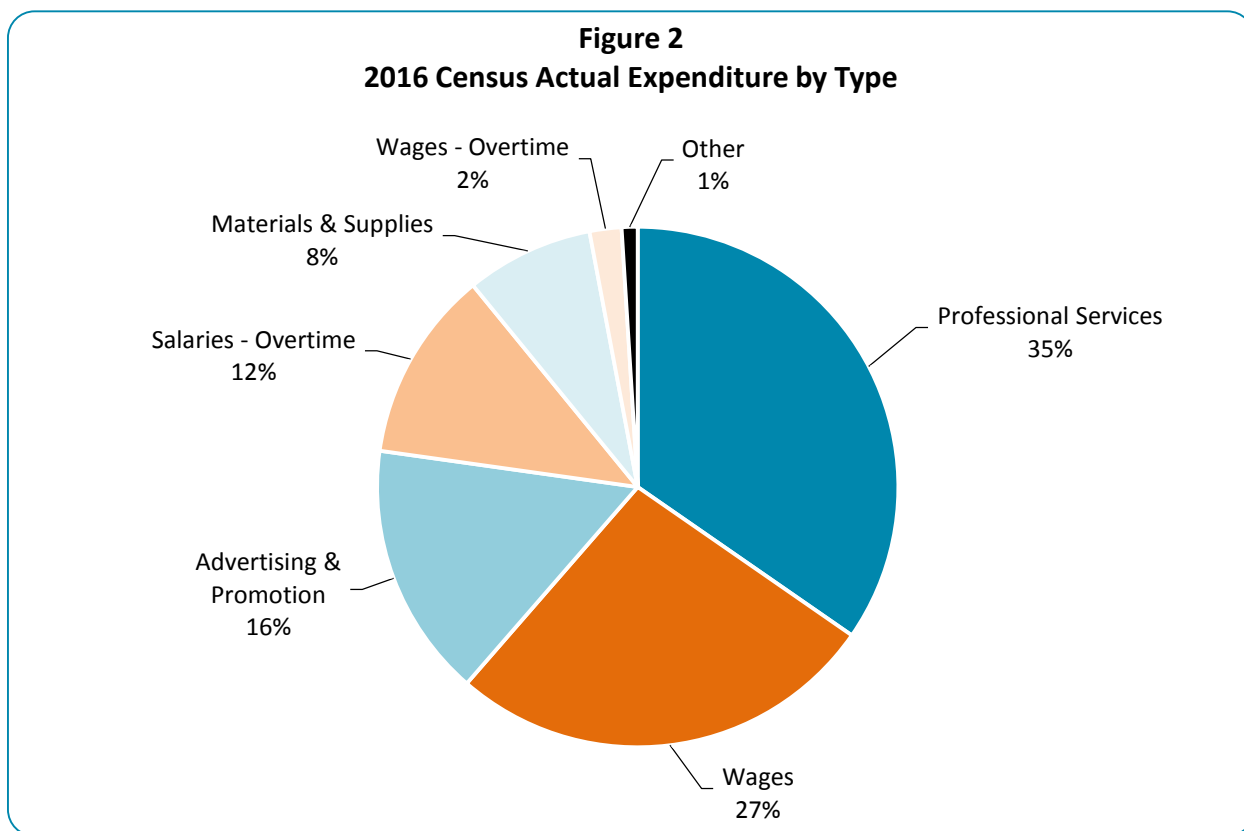

- Team 1: Administration and Pre-Enumeration Activities
- Team 2: Recruitment, Training and Special Areas Field Operations
- Team 3: Questionnaire Design and Field Operations
- Team 4: Interview Centre and Post-Enumeration Activities

Figure 1 depicts the organizational structure of the 2016 Census. The remainder of this section provides brief descriptions of the activities and challenges.

## Budget

The estimated 2016 Census current account budget was \$1.7 million. However, actual expenditure amounted to \$572 thousand (34% of the budget). The primary reason for being under budget was that the budget accounted for a higher percentage of data collection being completed by the more costly field interviewing than actually materialized. As shown in Figure 2, professional services (i.e. payments to interviewers) accounted for the largest proportion of actual expenditure at 35%. This budget excluded the \$168 thousand capital budget for the development of the e-census software application which was included in the Information Technology Office's budget.

## Questionnaire Design

A census of population and housing is designed to give a comprehensive count of the resident population and its housing stock. With respect to information content, it should show a good balance between demographic, social and economic characteristics and be in accord with international standards regarding the capture of basic data items. As such, Bermuda's 2016 Census questionnaire was designed in accordance with the United Nations' and the Caribbean Community's guidelines and the DOS' objectives to shorten the questionnaire to achieve cost savings, reduce the duration of interviewing and minimise response burden on the public. The population and housing questionnaire for private dwelling units includes a total of 43 questions that are grouped in fifteen sections (Appendix B):

### **Geographic Identifiers**

This group of questions includes information inclusive of CD number, assessment number and household number. The information in this section is necessary for deriving tabulations by parish, constituency and CD and is essential for mapping applications of the data.

### ***Household Listing***

There are six questions in the household listing section. The purpose of this section is to ascertain the number of persons who usually lived at the household as of Census Day, May 20, 2016. It also collects information on the number of overseas visitors and visitors who usually live elsewhere in Bermuda who may have been at the household on Census Day.

### ***Housing***

There are 12 questions in the housing section of the questionnaire and the purpose of this section is to provide a statistical profile of the size and quality of the residential housing stock. The key questions in the housing section relate to factors such as:

- H1 Type of building (one-unit dwelling, apartment, etc.)
- H2 Bedrooms
- H3 Full bathrooms
- H4 Type of tenure (owner-occupied or non-owner occupied)
- H5 Rent/mortgage payments
- H6 If former household members had emigrated
- H7 Number of emigrants
- E1 Year of emigration
- E2 Age of emigrant
- E3 Sex of emigrant
- E4 Race of emigrant
- E5 Bermudian status of emigrant

### ***Where Spent Census Night***

Question P1 was asked of all persons and determines whether they spent Census Night in Bermuda or abroad. The purpose of the question is to obtain a de facto count of the population.

### ***Characteristics***

Questions P2-P6 recorded information on an individual's relationship to the HRP, sex, date of birth, age and racial group.

The questions on age and sex are the key questions in the population questionnaire. Distributions by age and sex are necessary for most of the detailed tabulations since many other characteristics of the population vary according to age and sex. In addition, many of the quality tests of census data relate to the age and sex distributions of the enumerated population.

The question on relationship to the HRP allows for the categorization of the household and enables analysis based on the household composition.

### ***Birthplace, Immigration and Bermudian Status***

Questions P7-P11 provides the information for these three sections. This information allows for tabulations on the Bermuda-born population, foreign-born population and those with Bermudian status. It also shows the major countries of birth for the foreign-born population as well as the year or period when such persons entered Bermuda. The information in this section is useful in producing population projections.

### ***Health***

Questions P12-P13 collected information on the types of health insurance coverage and the reasons why persons did not have health insurance coverage.

### ***Marital Status***

Question P14 relates to marital status and is directed to persons 15 years and over. Marital status is a basic social indicator for analysis of the population. The data can be used with fertility profiles, for household type coding and also can be linked with housing and income data to estimate housing demand.

### ***Fertility for Women***

Question P15 provides information on the number of live births to females 15-49 years old. This information is used for the study of fertility levels and patterns and for the development of population projections.

### ***Education***

Question P16 provides information about the highest level of academic qualifications of Bermuda's population 16 years and over. Information on academic qualification provides a very broad indicator of the literacy level in Bermuda.

Highest academic qualification, refers to an individual's success at public or external examinations which is verified by receipt of a certificate. The academic achievements range from 'no formal certificates' to 'doctorate degrees'; only the highest level in respect of each individual is recorded.

### ***Economic Activity***

The purpose of this section (questions P17-P21) is to identify statistically those persons who comprise Bermuda's labour force and to develop a profile of them in terms of such factors as:

- Number of months worked
- Main economic activity
- Number of hours worked
- Occupation
- Industry (sector of employment)

This section is directed to persons 16 years and over. The key question in this section is question P18, which refers to main economic activity during the reference week of May 13 to 19, 2016. From the responses to this question, we derive measures of the labour force (i.e. the working population and the unemployed population), and the economically inactive (e.g. retirees and those engaged in voluntary work). Other information from this section enables the production of detailed occupational listings and industrial analysis of the economy by employment levels.

### ***Income from Main Job and Other Sources***

These sections cover questions P22-P25 for the population 16 years and over. Income from the main job was collected separately from income from all other sources. Income from other sources includes income from other jobs, pensions, rents, owned properties, financial assistance from government or private sources and income from other sources such as alimony or child support. It excludes one-time income receipts, such as lottery winnings, inheritances, etc. Income is an important economic indicator in its own right and is very useful in the analysis of social issues related to employment and housing.

### **Mapping**

Prior to the 2016 Census of Population and Housing, the DOS liaised with the Land Title Registry Office to ensure that the most up-to-date mapping layers were available for the Geographic Information Systems mapping software. A flyover of the island took place in 2013 and images were used to update the island's roads, buildings and other structures. Individual maps for the 245 CDs were created by the

DOS using a scale of 1:2,500. These CD maps were printed and incorporated into the Interviewer Portfolios for reference by the interviewers.

## Publicity

In order to garner the support and cooperation of the community, it was necessary that the public was informed adequately about the Census, its objectives and how it would benefit Bermuda. To heighten the population awareness of the census effort, the Department of Communication and Information along with CITV were utilized to build a comprehensive public awareness campaign. They created public service awareness materials featuring well-known members of the community. In addition, 30 second public service video and audio announcements were recorded and aired on various media outlets. Each of these was designed to appeal to varying segments of the community. The campaign used a census logo for branding and the slogan was “Because People Count”. Prior to Census Day, decals were placed on the rear windows of buses and posters were placed in areas frequented heavily throughout the island encouraging the community to participate in the census. Throughout the campaign, other means of getting the message out included the following:

- Banner Bugs
- Digital Signage
- Email Blasts
- Fashion Show
- Internet
- Magazine
- Ministerial Statements
- Newspaper
- Online Media
- Posters
- Press Conference
- Radio
- Shopping Bags
- Signs
- SMS Blast
- Talk Show Appearances
- Television

## Recruitment

The DOS partnered with the Department of Human Resources to use the Human Resources Management Information System to process most applications. The remaining applications were completed manually and submitted to the DOS. Successful applicants underwent security vetting by the Bermuda Police Service. The recruitment timing varied by position according to when temporary or casual workers were required.

The total number of applicants for each post advertised were as follows:

- Computer Assisted Personal Interviewers (CAPI) – 354
  - Interviewed households in-person using netbook computers or paper questionnaires.
- Computer Assisted Telephone Interviewers (CATI) – 82
  - Interviewed households by telephone from the DOS office using the e-Census software application.
- Group Dwelling Interviewers – 77
  - Interviewed group dwelling households in-person using netbook computers or paper questionnaires.
- Non-Sheltered Interviewers – 72
  - Interviewed non-sheltered households in-person using paper questionnaires.
- Editor & Coders – 72
  - Checked questionnaires for completeness, accuracy and consistency and coded responses at the DOS office.
- In-House Census Officers – 63

- Performed a variety of census-related administrative duties from the DOS office such as conducted walk-in interviews, approved e-census questionnaires and supervised interviewers.
- Translation Interviewers – 61
  - Interviewed the non-English speaking population using netbook computers in-person or telephones at the DOS office.

There were multiple advertisements for CAPI in an effort to increase the number of productive fieldworkers.

## Training

Training is an essential part of any census or survey as the fieldworkers and office staff play vital roles in data collection. An important aspect of data collection is ensuring that the information is collected according to prescribed standards and procedures as outlined by the census training. Well trained staff is essential as it helps to ensure consistency in gathering data and garners the public's confidence in the census operations.

All census training was conducted via in-class Microsoft PowerPoint presentations. This was a shift away from the previous census' verbatim training method and was chosen to shorten the length of training and provided a more engaging training experience. As such, the PowerPoint presentations did not contain all of the details included in the Interviewer's Manual. Trainees were asked to collect and review their Interviewer's Manuals at least one week prior to the start of training so that they could receive maximum benefit from the training.

All but two training sessions took place during evenings (typically 6pm to 9pm). A written assessment was administered at the end of training along with the introduction of interview observation assessments. This component was added to gauge the ability of trainees to apply their learning in the practical setting of an interview.

Training for the 2016 Census took place over a period of six months and encompassed preparing permanent and temporary staff and casual workers. Multiple CAPI training sessions were required in an attempt to boost the number of interviewers due to high rates of attrition that occurred at various stages of the census operation.

## Enumeration

The 2016 Census of Population and Housing incorporated a three-stage approach to the collection of the census information from Bermuda's private households. Between each stage there was an administrative period. Initially the enumeration period was scheduled from May 21 until December 31 2016. Due to the census completion rate being 81% in December 2016, the Minister authorized the extension of the enumeration until March 31, 2017 to minimise the negative implications of a low completion rate. The timeframes for the three stages of data collection were as follows:

1. Stage 1 - May 21, 2016 to July 13, 2016
2. Stage 2 – July 20, 2016 to August 24, 2016
3. Stage 3 - September 1, 2016 to March 31, 2017

### **Stage 1**

The Cabinet approved the development of an e-census software application solution for the collection and management of the 2016 Census. This decision allowed the DOS to provide household members with a quick, easy and convenient method to complete the census. In addition, the e-census application reduced the Department's reliance on interviewers and realized cost savings.

The first stage of data collection was self-enumeration through the e-census software application. Prior to Census Day, all private dwelling units in Bermuda were mailed a letter. The letter contained a specific username and password for each household along with detailed instructions on how to identify an HRP and how to complete the census questionnaire for the household. Household members 16 years and over were given the option to have the HRP complete the questionnaire on his/ her behalf or to complete his/ her own questionnaire. Once completed, the electronic questionnaire was submitted by the HRP or individual household member for the DOS to review and approve. If the questionnaire passed a number of verification checks, the DOS sent a confirmation email to the HRP or the individual household member and thanked him/ her for their participation. However, if the questionnaire was flagged for errors, then the HRP or individual household member was contacted to resolve the issues. After the issues were resolved, the questionnaire was resubmitted for approval.

#### **Corporate Interviews**

An information campaign took place to encourage businesses to allow their employees to complete the census online during working hours, where possible. Over 100 employers were contacted to lend their support for this initiative and the DOS staff availed themselves to visit these businesses and assist staff with census completions. Workers in the public sector were also encouraged through Government-wide emails and their heads of departments to use the online census application to complete their census.

#### **Stage 2**

During the second stage of enumeration, households that did not provide their information in the previous stage were called by the DOS telephone interviewers. The DOS used its survey database to contact households for telephone interviews with the e-census application. Approximately 25 CATI interviewers were hired and supervised on weeknights and weekends.

#### **Stage 3**

In the third stage of data collection, field interviewers visited the remaining households to collect information from households that had not completed the census during the first two stages. The field interviewers were equipped with paper questionnaires and netbook computers which streamlined the data collection process by adding automated skip instructions and preventing out-of-range responses by using the Census and Survey Processing System software. Approximately 140 field interviewers were employed by the DOS during Stage 3. Interviewers were required to report to the DOS supervisors on a weekly basis to submit completed work and to back up the data on the netbook computers. They were required to visit each household at least three different times on different days. If household members were not at home, 'call back cards' were left at the household with the pertinent contact information. Households that had not been interviewed by the middle of March 2017 were visited by special enumeration teams, handpicked from staff members and the high-performing interviewers.

#### **Interview Centre**

The Interview Centre served as a central location for households to self-complete the 2016 Census interview or to be interviewed by a DOS employee. Operating out of the DOS office in the City of Hamilton, the Interview Centre served nearly 600 households (accounting for just over 1,000 persons) who sought assistance with completing their census throughout all 3 stages.

#### **Special Enumeration**

Special Enumeration is a subset of Field Operations involving the collection of data from persons who resided in group dwellings or institutions and the non-sheltered population. Group dwelling data is included as a component of the main census data file whereas institutional and non-sheltered data are excluded from the main census data file.

### **Group Dwellings**

The purpose of the group dwelling enumeration was to acquire a count and profile of the population who usually resided in a group dwelling as of Census Night. The enumeration phase commenced on May 21, 2016 and concluded on March 31, 2017. Three officers managed six group dwelling interviewers, two interviewers each, and an additional member served as an alternate. Interviewers met weekly with their group dwelling supervisor.

### **Institutions**

The purpose of the data collection from institutions was to acquire a count and profile of the institutional population as of Census Night. The 2016 Census was the first Census in which all institutions were requested to complete the Census electronically on behalf of the residents in their facility. This was a shift away from Census interviewers collecting Census data from the administrator via a paper questionnaire. The new method proved to be a cost-saver for the DOS as interviewers did not need to be hired. The institutional data collection period was from May 21, 2016 to March 31, 2017.

### **Non-Sheltered**

The 2016 Census was the third Census to collect data on the non-sheltered population in Bermuda, following the 2000 and 2010 Census. In addition to collecting data on questions that were asked during previous censuses, questions on economic activity were added to the non-sheltered questionnaire. This allowed the DOS to provide a more comprehensive profile of the non-sheltered population.

Non-Sheltered interviewers were provided with a recommended strategy for locating non-sheltered persons to interview. The strategy was prepared by the DOS after consultation with agencies/people that work with non-sheltered persons, including community workers, government departments and non-government support agencies. In addition, 2010 Census data on the location of non-sheltered persons was also reviewed. Members of the public were also asked to inform the DOS of any known locations where non-sheltered persons resided. The strategy included suggested locations to visit where the chances of finding non-sheltered persons were greatest and recommended times of day to conduct interviews. The non-sheltered interviewing period took place between June 6, 2016 and March 31, 2017. The majority of the non-sheltered persons counted were interviewed during the first three months of the period.

### **Remuneration**

The 2010 Census pay rates per questionnaire were used as a benchmark for preparing the 2016 Census pay rates per questionnaire. Adjustments were made to the pay rate to reflect the shorter 2016 Census questionnaire. Phase 1 payments were implemented from May 21, 2016 and bonus rates applied from February 21, 2017 until March 31, 2017 (see below).

<b>Interviewing Method</b>	<b>Phase 1 Rate</b>	<b>Bonus Rate</b>
CATI (no-appointment)	\$13.00	\$16.25
Group Dwellings	\$12.00	\$15.00
Translation (phone)	\$18.00	\$22.50
Translation (face/ face)	\$23.00	\$28.75
Non-Sheltered	\$21.00	\$26.25
CAPI (netbook/paper)	\$17.00	\$21.25
Partials	\$6.00	\$7.50
Gas Allowance	\$3.00	\$3.75
Subdivided Dwelling Units/Non-Compliant Households		\$5.00

## Post-Enumeration

### ***Preparatory Activities***

The use of logic or front-end edits built into the online census application reduced the number of errors that needed to be corrected. After the data collection phase concluded, various methods were employed to ensure that all data that were captured electronically were clean and fit for use. These methods included the use of an edit programme that was developed to flag errors related to missing responses, invalid codes, duplicate entries and conflicting answers. These errors were investigated and resolved.

### ***Editing, Coding and Data Verification***

The editing, coding and data verification phase of the 2016 Census was executed over an 11 month period (February 2017 to January 2018). Editing census questionnaires was necessary to ensure that there were no responses to questions that were outside of a specified range. Data were edited extensively by using Census and Survey Processing System software to detect inconsistencies and invalid values. Frequency and cross tabulations were created to assess and refine the data. Coding was a procedure used to categorise open-ended responses according to pre-existing classification systems. The 2016 Census was the first time computer aided coding was used to facilitate the coding process for occupation and industry. Data verification was a process whereby selected household members were contacted to confirm information collected.

### ***Imputations***

Two types of imputation were used primarily during the data processing phase of the 2016 Census. Dynamic imputation (hot deck technique) eliminated unknown answers from the data by allocating values for unavailable, unknown, incorrect or inconsistent data. For the first time, the nearest neighbour imputation method was used to account for occupied households which were visited by interviewers but the census questionnaires were not completed for various reasons. This imputation method was the best fit to address non-response and provided the total population for Bermuda.

### ***Tabulations***

A tabulation plan was produced and reviewed by the CPT. Census tables were generated by using Census and Survey Processing System software. All tables were double-checked by another officer.

## Challenges

An undertaking as major as a census is never without its challenges. Several obstacles to the smooth running of the 2016 Census are listed below:

### ***Conduct of a 2015 Census Delayed to 2016***

A major issue was the delay in obtaining the necessary budget to conduct a census in 2015. This delay resulted in the census being held in 2016 and an abbreviated preparation time for the conduct of the 2016 Census once the legal framework had been finalized. Although the 2016 Census was launched in time for Census Day, the shortened preparation time meant a condensed period for activities such as developing and testing the e-census software application, preparing interviewer training and developing the advertising and media campaign prior to the start of the census.

### ***Non-delivery of Mail in Some Areas***

Some households did not receive their login credentials in a timely manner to utilize the online Census application. The delayed and non-delivery of mail in some parishes coupled with the closure of some of the smaller sub post offices resulted in some households having to personally collect their mail and/or call the DOS to request their login credentials.

### ***Insufficient Applicants for Field Interviewer Positions***

The short supply of field interviewers was an impediment to a swift data collection period for interviewers. Attrition during census training and the conduct of the census were anticipated. Therefore, the greater the number of successful applicants, the more likely that the data collection period would have benefited from having a cadre of high-performing interviewers at the disposal of the DOS given any unforeseen circumstances. To boost the number of interviewers, Government employees were invited to apply for these positions with additional daytime training conducted to facilitate them. Additional advertisements were used to attract any other potential interviewers. Although these strategies yielded additional applicants, the attrition of previously recruited field interviewers resulted in a constant shortage in this area. Additional training was also held to assist potential field workers that may have required further training.

### ***Low Productivity for Some Field Interviewers***

Many interviewers, who although successfully completed training, either did not conduct any interviews or conducted very low numbers of interviews. In-office supervisors tracked the progress of interviewers on a weekly basis. Field interviewers with low completions but steady progress were given the opportunity to increase their completion rate. Inefficient interviewers were asked to return their interviewing kits and their assignments were given to high-performing interviewers to complete. These re-assignments increased the weekly uptake in completions but lengthened the data collection.

### ***Conduct of Other Households Surveys during the Same Period***

Household surveys conducted by other Government and Non-Government departments during the census data collection confused some households as to whether they completed the 2016 Census. Both non-census surveys asked basic demographic questions that appeared similar to those that were featured on the census questionnaire. Household members expressed to field interviewers that they completed the census when this was not the case. Delays occurred as interviewers would then have to verify the household members' claims with DOS and then find an appropriate time to revisit the household and complete the census.

### ***Refusals and Non-response from Some Members of the Public***

Reluctance and refusals of some persons to cooperate with the census data collection is an unavoidable occurrence for every census initiative. The DOS initially countered this resistance with media campaigns that emphasized the importance of collecting accurate and comprehensive data for all residents. Persistent refusals were sent correspondence that reminded households of their duties under the *Statistics Act 2002* and the penalties for non-compliance and were revisited by experienced interviewers. These combined efforts encouraged some households to ultimately cooperate.

### ***Hurricane Nicole***

In October 2016, Hurricane Nicole approached Bermuda which led to postponement of census training. In the aftermath of Hurricane Nicole, 90% of the island lost electricity which resulted in lost interviewing time. Six days after the hurricane passed all customers had electricity restored.

## POPULATION

### De Jure Population

The 2016 de jure population was 63,917 and was comprised nearly entirely of the civilian non-institutional population (Table 1). As a small component of the de jure population, the number of non-sheltered persons counted increased to 138. A profile of the non-sheltered population can be found in the Non-Sheltered section.

**Table 1**  
**DE JURE POPULATION, 2016 AND 2010**

De Jure Population	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	63,917	64,319	100	100	
Civilian Non-Institutional Population	63,779	64,237	100	100	**
Non-Sheltered Population	138	82	**	**	**

\*\* Less than 1%.

### De Jure Civilian Non-Institutional Population by Sex

The de jure civilian non-institutional population (or population) amounted to 63,779 (Table 2). The distribution of males and females remained unchanged at 48% and 52%, respectively. The sex ratio increased from 92 to 93 males per 100 females. The majority of the analysis in this report will focus on the de jure civilian non-institutional population.

**Table 2**  
**POPULATION BY SEX, 2016 AND 2010**

Sex	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	63,779	64,237	100	100	
Male	30,690	30,858	48	48	**
Female	33,089	33,379	52	52	**
Sex Ratio	93	92			

\*\* Less than 1%.

### Geographic Distribution

Amongst the nine parishes, Pembroke retained the largest share of the population distribution at 17% (Table 3). Smith's and Warwick had the only percentage point increases (+1) in their percentage distributions and St. George's and Sandys had the only percentage point decreases (-1). The municipalities of the Town of St. George's and the City of Hamilton both had 1 percentage point declines in their distributions.

**Table 3**  
**POPULATION BY PARISH AND MUNICIPALITY, 2016 AND 2010**

Parish and Municipality	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	63,779	64,237	100	100	
St. George's	5,659	6,422	9	10	-1
Town of St. George's	1,527	1,801	2	3	-1

Sandys	6,983	7,653	11	12	-1

\*\* Less than 1%.

Bermuda's population density was 3,084 persons per square mile in 2016 (Table 4). Map 1 provides a display of the population density by parish and municipality. Pembroke's population density of 5,314 persons per square mile was the highest by some distance. St. George's population density was 1,451 persons per square mile, considerably lower than any other parish. A factor in this much lower population density is that the airport is included in the total land area for St. George's.

**Table 4**  
**POPULATION DENSITY BY PARISH AND MUNICIPALITY, 2016 AND 2010**

Parish and Municipality	Number		Area in Square Miles <sup>1</sup>	
	2016	2010	2016	2010
	Total	3,084	3,057	20.68

### De Facto Population

In 2016, the de facto population was 64,486 (Table 5). The vast majority of the de facto population continued to be comprised of the civilian non-institutional population, increasing 8 percentage points to 91% of the total. The distribution of overseas visitors and transients decreased 9 percentage points to 7%, largely due to fewer cruise ships and yachts in Bermuda on Census Night in 2016. The institutional population on Census Night declined to 711. A profile of the institutional population is located in the Institutions section.

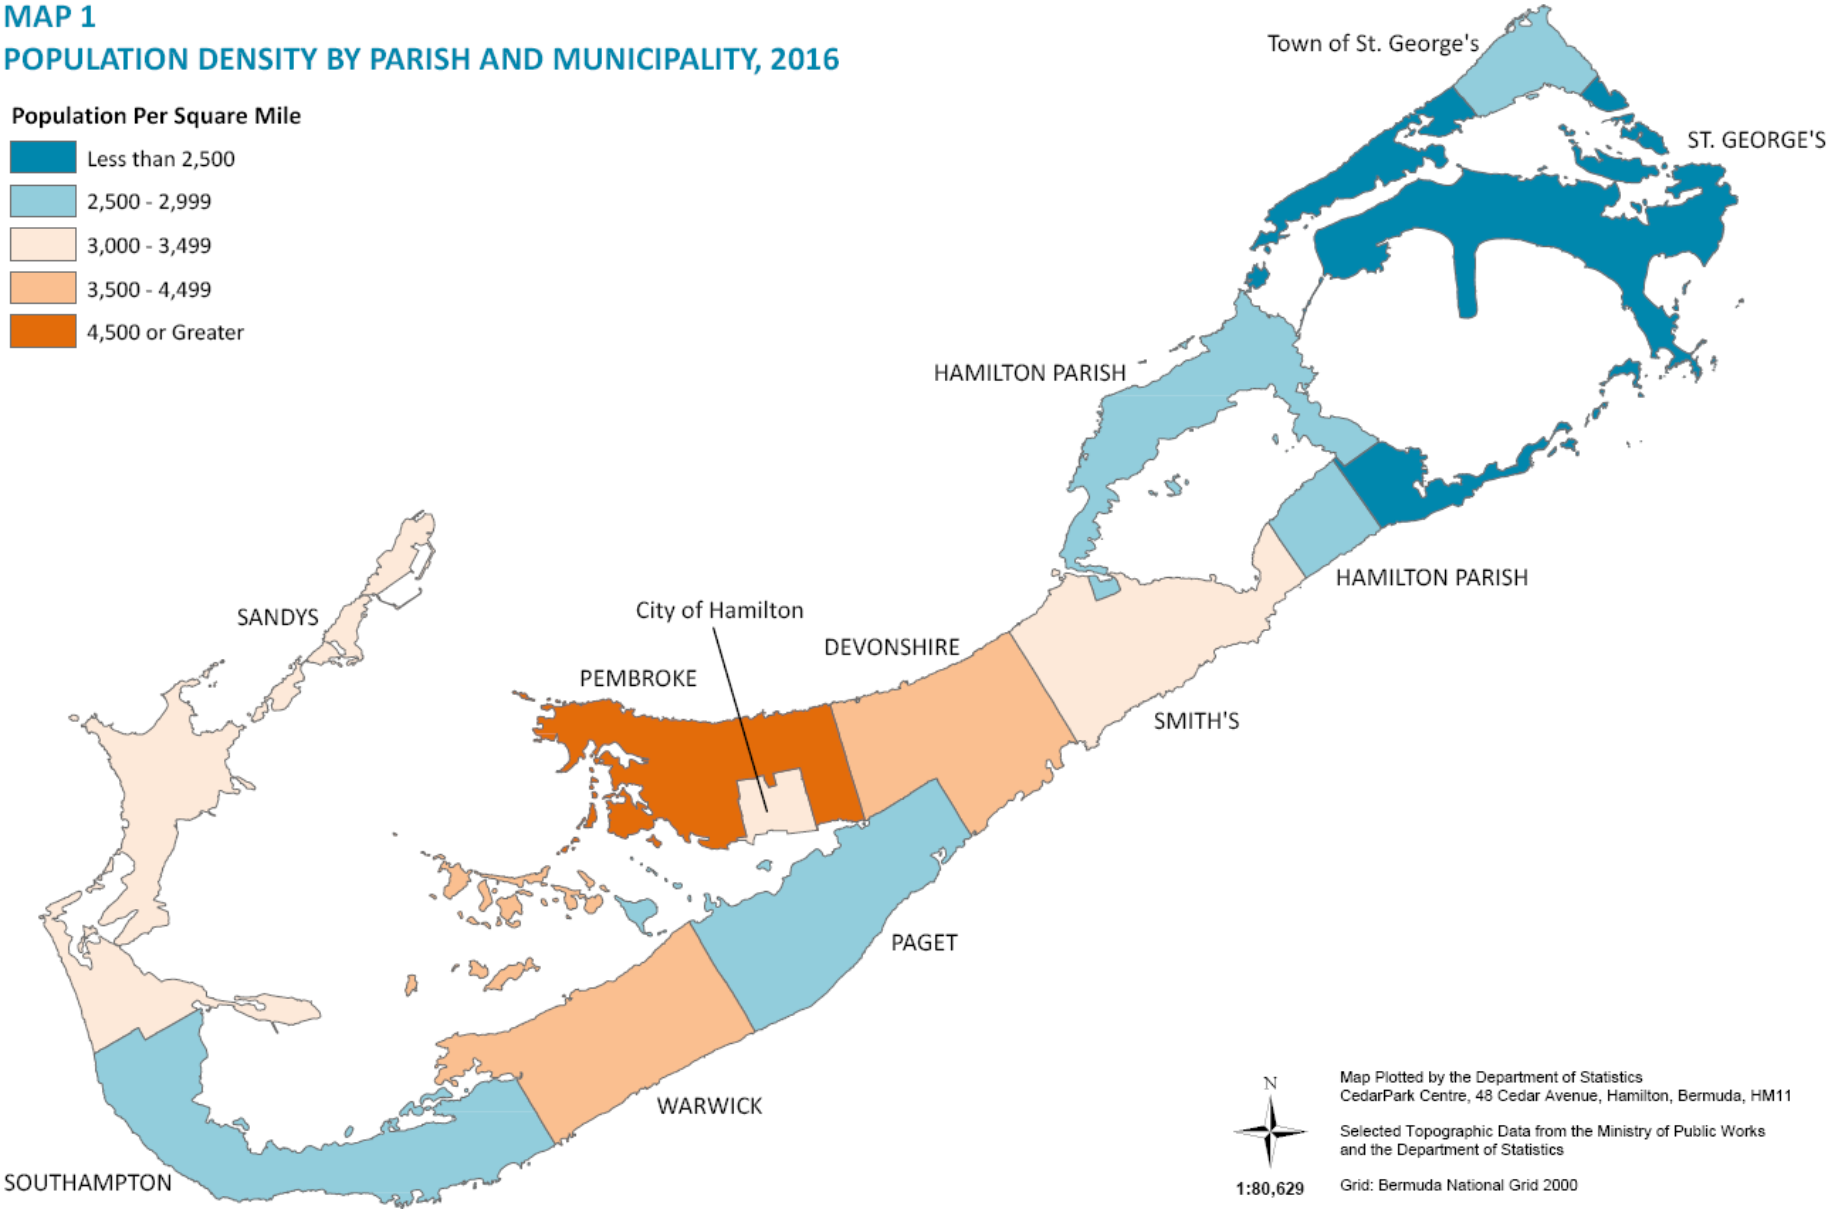

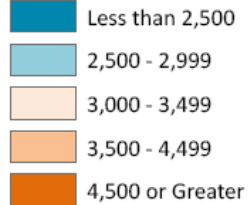

**Table 5**  
**DE FACTO POPULATION, 2016 AND 2010**

De Facto Population	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	64,486	71,328	100	100	
Civilian Non-Institutional Population	59,000	58,932	91	83	+8
Overseas Visitors & Transients	4,637	11,492	7	16	-9

## AGE

### Overview

There was no intercensal change in the most populated age group which remained as 45 to 64 years (Figure 1). Of significance was that seniors (65 years and over) had the largest percentage point increase (+3) whereas 15 to 29 year olds had the largest percentage point decline (-2). Nearly half of the population was 45 years or older compared with 44% in 2010. Figure 1 also shows that the three youngest age groups had percentage point declines whereas the two oldest age groups had percentage point increases, indicating an ageing population. These demographic changes are occurring as a result of a reduction in fertility rates and greater longevity due to improvements in life expectancy. In 2016 there were 7 centenarians, up from 6 in 2010. If these demographic shifts continue, they may have a major impact on the size of the school population, the size of the labour force, on pension and health insurance plans and, in general, on Bermuda's economy and society.

### Dependency Ratios and Median Age

Dependency ratios can be used as an indicator of the economic impact of population ageing by potential workers aged 15 to 64 years to support potential non-workers (under 15 years and 65 years and over). The total dependency ratio increased from 43 to 46 dependents per hundred persons 15 to 64 years (Table 1), due primarily to the rise in the proportion of seniors. The old age dependency ratio increased from 19 to 25 while the youth dependency ratio decreased from 23 to 22. The decline in the youth dependency ratio is mainly due to Bermuda's low fertility levels.

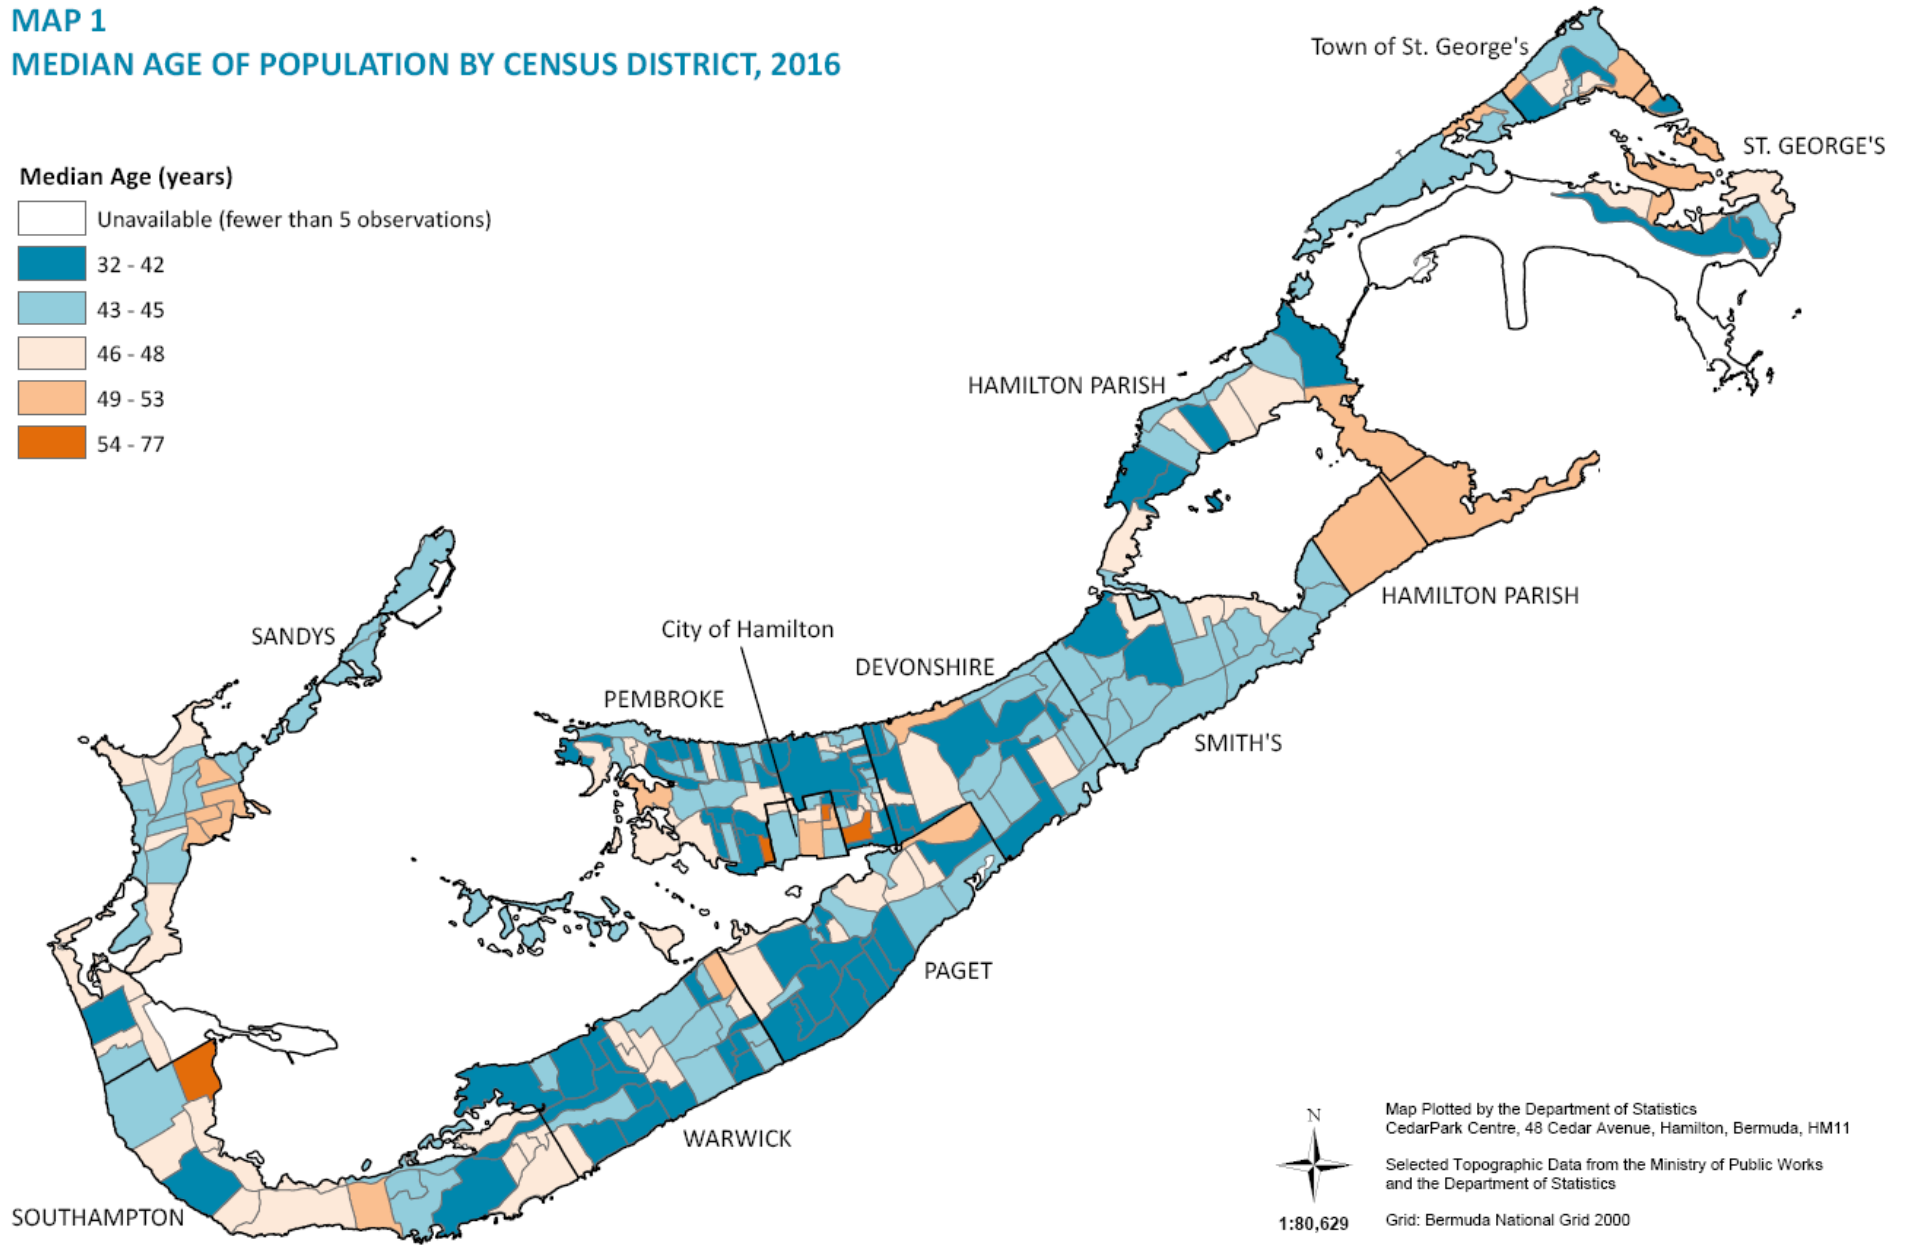

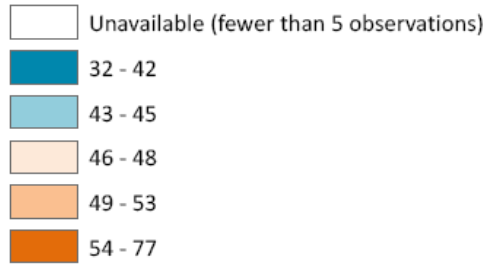

**Table 1**  
**POPULATION BY DEPENDENCY RATIOS AND MEDIAN AGE, 2016 AND 2010**

Dependency Ratios and Median Age	Number		Ratio Change
	2016	2010	2010-2016
Total Dependency Ratio	46	43	+3
Youth Dependency Ratio	22	23	-1
Old Age Dependency Ratio	25	19	+6
Median Age ( <i>years</i> )	44	41	

The median age of the population increased from 41 to 44 years, another indicator of an ageing population. Map 1 shows that the median age of the population by CD. The CD with the lowest median age of 32 years was in Devonshire and the CD with the highest median age of 77 years was in Southampton.

# MAP 1 MEDIAN AGE OF POPULATION BY CENSUS DISTRICT, 2016

## Median Age (years)

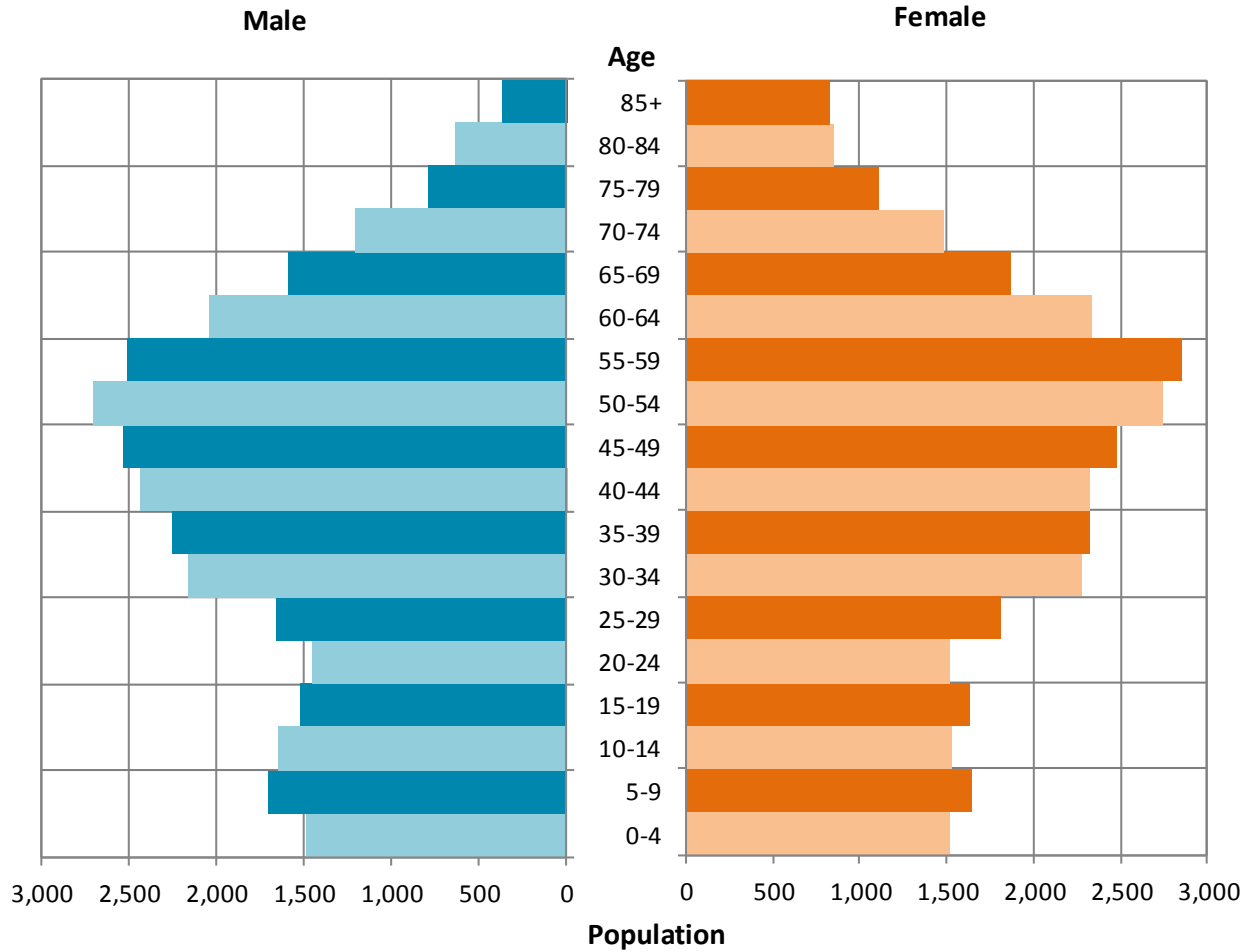

Map Plotted by the Department of Statistics

Selected Topographic Data from the Ministry of Public Works  
and the Department of Statistics  
Grid: Bermuda National Grid 2000

## Population Pyramid

The population pyramid shows the age-sex distribution. In 2016, Bermuda's population pyramid is constrictive, in that compared to a classic pyramid there is a narrowing of the pyramid base due to smaller percentages of younger people and a gradually declining top of the pyramid due to the percentages of seniors. The excess of females over males in the older age groups is due to their longer life expectancies, a trend typical among developed countries.

**Figure 2**  
**Population Pyramid by Five-Year Age Group and Sex, 2016**

## RACE

The majority of Bermuda's population continued to report their race as black (Table 1). However, blacks had the only decline in their distribution during the six-year period (2010 to 2016), declining 2 percentage points to 52%. Whites comprised 31% as the second most reported race. The proportion of the population who were mixed increased 1 percentage point, as did its subcategory black and other races.

**Table 1**  
**POPULATION BY RACE, 2016 AND 2010**

Race	Number		Percentage Distribution		Percentage Point Change 2010-2016
	2016	2010	2016	2010

\*\* Less than 1%.

## NATIVITY

The Bermuda-born population comprised 70% of the total population (Table 1). With the exception of residents born in Canada, which declined 1 percentage point to 3%, all other categories remained unchanged in their percentage distributions.

**Table 1**  
**POPULATION BY COUNTRY/ REGION OF BIRTH, 2016 AND 2010**

Country/ Region of Birth	Number		Percentage Distribution		Percentage Point Change 2010-2016
	2016	2010	2016	2010

<sup>1</sup> Includes 2,551 persons for whom there is no data - see Technical Note.

At the specific country level, there were no changes to the ordering of the top five ranked countries of birth which were Bermuda, United Kingdom, United States, Canada and Jamaica, respectively. The Philippines climbed one spot to sixth with a corresponding drop to seventh for residents born in the Azores. India remained eighth and Portugal climbed five spots to ninth. Residents born in Barbados fell one spot to round out the top ten.

## BERMUDIAN STATUS

### Overview

Bermudians represented 79% of the population, up one percentage point from 2010 (Table 1). Conversely, the proportion who were non-Bermudian declined one percentage point to 21% in 2016. There were no intercensal changes in the proportions of the non-Bermudian subcategories. Non-Bermudian Spouses of Bermudians and Permanent Resident Certificate holders had a 3% share of the total population whereas Other Non-Bermudians remained at 15%.

### Bermudian Status and Nativity

Of the Bermudian population, 86% were Bermuda born compared with 10% of the non-Bermudian population. Of all categories, non-Bermudian Spouses of Bermudians were the least likely to be born in Bermuda at 1%. The largest shift in percentage distributions between 2010 and 2016 occurred for Permanent Resident Certificate holders, for whom the proportion who were Bermuda born increased 4 percentage points to 10%.

## IMMIGRATION

### Recent Immigration

There were a total of 7,360 immigrants between January 1, 2010 and May 20, 2016 (Table 1). Excluding 2016 which contains a partial year of data, the greatest immigration (24%) occurred in 2015 and the least (10%) in 2011.

Bermudians were most likely to have immigrated in 2014 and 2015 (17% each) and least likely in 2011 and 2012 (13% each). Non-Bermudians most often immigrated in 2015 (26%) and least in 2011 (10%). Non-Bermudians represented 78% of immigrants for the entire period. Figure 1 shows that the level of Bermudian immigration was relatively stable with slow growth since 2011 whereas non-Bermudian immigration increased more rapidly since 2011.

**Table 1**  
**IMMIGRANTS BY SELECTED YEAR OF IMMIGRATION AND BERMUDIAN STATUS**

Year of Immigration	Bermudian Status					
	Number			Percentage Distribution		
	Total	Bermudian	Non-Bermudian	Total	Bermudian	Non-Bermudian

2016 <sup>1</sup>	708	160	548	10	10	10

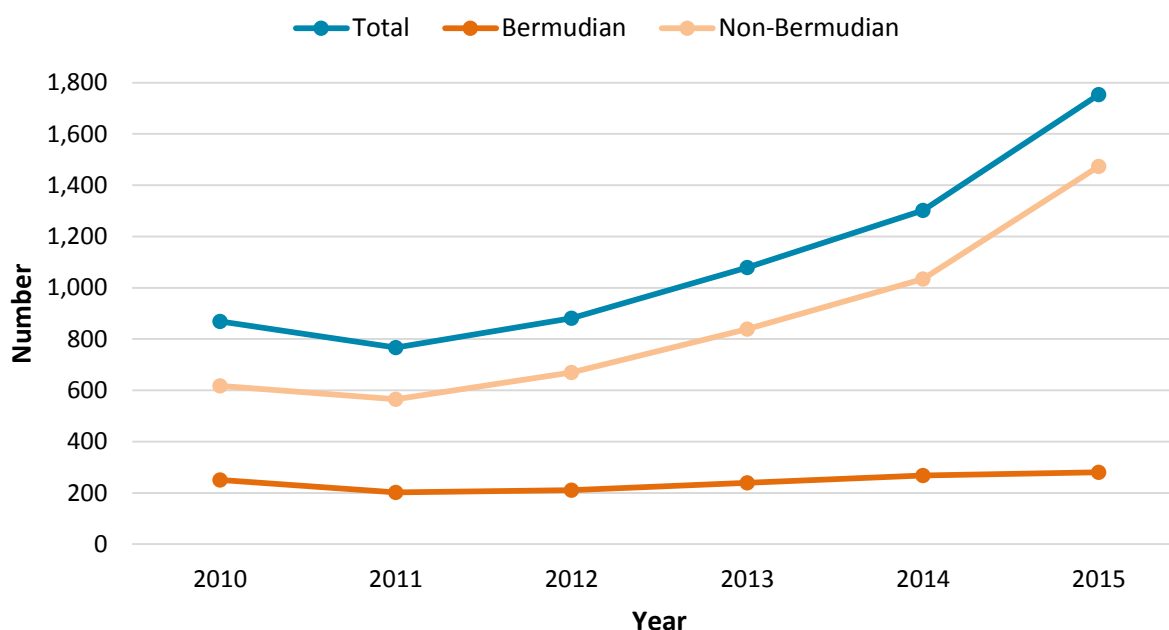

<sup>1</sup> January 1, 2016 to May 20, 2016.

### Selected Demographic Characteristics

Males held a 52% share of the total number of immigrants. By race, whites represented nearly half (49%) of all immigrants between 2010 and 2016 followed by mixed and other races (28%) and blacks (23%). The median ages of Bermuda-born and foreign-born immigrants were 34 and 35 years, respectively.

**Figure 1**  
**Immigrants by Bermudian Status and Selected Year of Immigration**

### Duration of Residence: Bermuda-Born Immigrants

One-quarter of the immigrant population one year and older who were born in Bermuda have resided on the island for 30 years or more since last returning to live (Table 2). This was followed closely by 10 to 19 years of duration at 24%. Both of these categories increased 1 percentage point since 2010 and the only decrease of 3 percentage points occurred in the 20 to 29 year category.

**Table 2**  
**BERMUDA-BORN IMMIGRANT POPULATION ONE YEAR AND OLDER BY DURATION OF RESIDENCE SINCE LAST RETURNED TO LIVE IN BERMUDA, 2016 AND 2010**

Duration (Years)	Number		Percentage Distribution		Percentage Point Change 2010-2016

Not Stated	0	203			

\*\* Less than 1%.

<sup>1</sup> Excludes persons for whom there is no data - see Technical Note.

### Duration of Residence: Foreign-Born Immigrants

As of 2016, foreign-born immigrants accounted for 81% of all immigrants (Tables 2 and 3). The most common duration of residence for foreign-born immigrants since their last arrival to live in Bermuda was 30 years and over (27%) compared with less than 5 years (31%) in 2010. The largest percentage point increase (+4) occurred for 30 years duration or more whereas the largest percentage point decrease (-6) occurred in the category of less than 5 years.

**Table 3**  
**FOREIGN-BORN IMMIGRANT POPULATION BY DURATION OF RESIDENCE SINCE LAST ARRIVAL TO LIVE IN BERMUDA, 2016 AND 2010**

## EMIGRATION

### Overview and Demographic Characteristics of Emigrants

The 2016 Census was the second time that information about Bermuda's former residents was collected. There were a total of 1,424 persons reported to have emigrated during the six-year period May 21, 2010 to May 20, 2016 (Table 1). The annual average number of emigrants was 237.

Females accounted for 52% of all emigrants compared to a 50-50 split during the May 21, 2000 to May 20, 2010 intercensal period. The sex ratio of emigrants declined from 100 to 91 males per 100 females.

**Table 1**

A 1 percentage point increase in the distribution of black emigrants combined with a 4 percentage point drop in the share of white emigrants resulted in the proportion of black emigrants (43%) surpassing white emigrants (39%) to become the leading racial category (Table 3). Emigrants of mixed and other races had the largest percentage point increase (+3) of the racial categories to expand to an 18% representation.

### Demographic Characteristics of Emigrants by Bermudian Status

The annual average number of emigrants during the 2010 to 2016 intercensal period by Bermudian status amounted to 177 Bermudian emigrants and 59 non-Bermudian emigrants. Bermudian emigrants increased in their share by 3 percentage points to account for three-quarters (or 1,061) of emigrants. Conversely, non-Bermudians decreased 3 percentage points to one-quarter (or 354) of emigrants.

Bermudian and non-Bermudian emigrants mirrored each other in terms of shifts in their sex distributions; the proportion of females increased 2 percentage points to 52% in both cases. The sex ratio of Bermudian emigrants declined from 99 to 91 males per 100 females and their non-Bermudian counterparts' sex ratio decreased from 101 to 92 males per 100 females.

As with the total emigrant population, Bermudian emigrants were primarily represented in the 15 to 29 age group, increasing 6 percentage points to 60%. The age distribution was much more even for non-Bermudian emigrants as the 15 to 29 age group and 30 to 44 age group were the joint leading categories at 34%. The median ages of Bermudian and non-Bermudian emigrants declined by 2 years to 24 and 31 years, respectively.

Slightly more than half (51%) of Bermudian emigrants were black as their share of the distribution increased 2 percentage points. The proportion of white Bermudian emigrants declined 5 percentage points to 34% and Bermudian emigrants of mixed and other races increased 3 percentage points to 15%. The distribution of non-Bermudian emigrants by race differed with the majority (54%) being white, a 1 percentage point increase. Non-Bermudian emigrants of mixed and other races (28%) surpassed black non-Bermudian emigrants (18%) to become the second leading racial group.

## Emigration Timing

Emigration data was captured from May 21 to December 31 in 2010 and January 1 to May 20 in 2016 whereas the years 2011 to 2015 included emigration data for the entire year. Therefore, readers are advised to take this into account when making comparisons.

There was an increasing emigration trend from 2011 to 2014, with a slight drop from 2014 to 2015 (Table 4 and Figure 1). The peak year was 2014 which accounted for 22% of total emigration, more than double that of 2011 which had the least emigration.

**Table 4**  
**EMIGRANTS BY YEAR OF EMIGRATION AND BERMUDIAN STATUS**

<sup>2</sup> January 1, 2016 to May 20, 2016.

The Bermudian emigrant population had a similar emigration pattern as the total emigrant population. Bermudians emigrated most frequently in 2014 at 22% and the least in 2011 at 10%. In contrast, emigration for non-Bermudians dipped between 2012 and 2013 and increased thereafter. Furthermore, 2015 was the leading year of emigration for non-Bermudians at 25% and 2011 was the lowest year at 11%.

**Figure 1**

## HEALTH INSURANCE

### Overview

The most common health insurance coverage reported was major health coverage, as was the case in 2010. Notably, this was the only category that declined, falling 12 percentage points to 72% (Table 1). Proportional gains occurred in the remaining categories, with the largest being a 4 percentage point increase to 6% for persons with only private basic health coverage. The population without health insurance coverage was the second most reported response, climbing 3 percentage points to 8%.

**Table 1**  
**POPULATION BY TYPE OF HEALTH INSURANCE COVERAGE, 2016 AND 2010**

Type of Health Insurance Coverage	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016

### Demographic Characteristics of Population without Health Insurance Coverage

The gap narrowed by 6 percentage points between the sexes during the intercensal period, with males representing 56% of the population without health insurance coverage (Table 2). The result was a decline in the sex ratio from 145 to 128 males per 100 females.

There was a shift in the age category most commonly without health insurance coverage; persons 45 to 64 years led in 2016 and 15 to 29 year olds in 2010. There was no proportional change for persons under 15 years, however, persons 15 to 44 years of age declined by 6 percentage points and persons 45 years and over increased by 7 percentage points. This highlights to an ageing trend for the population without health insurance coverage, as evidenced by an increase in the median age from 32 to 35 years.

There was no change in the distribution by race. Blacks represented 77% of the population reporting no health insurance coverage, followed by mixed and other races at 14% and whites at 9%. Similarly, the profile of this population by nativity remained unchanged as the Bermuda-born population accounted for 86%. Bermudians represented 93% of the population without health insurance coverage, an increase of 1 percentage point. A corresponding decrease of 1 percentage point for the non-Bermudian population resulted in a 7% share in 2016.

**Table 2**

<sup>1</sup> Excludes persons for whom there is no data - see Technical Note.

The population 16 years and older without a formal academic qualification decreased from the leading category without health insurance coverage in 2010 at 39% to second in 2016 at 21%. This decline led to the population with high school certificates to increase by 11 percentage points to represent almost half of the population without health insurance coverage. These two categories had the largest percentage point changes, although persons with technical or vocational certificates, associate degrees or diplomas had a noteworthy percentage point increase (+7) to represent one-fifth of this subpopulation.

Despite an 8 percentage point decline, persons 16 years and older without health insurance coverage were most likely to be working (36%). The unemployed and economically inactive populations both had a 32% share due to percentage point increases of 3 and 6, respectively.

## MARITAL STATUS

### Overview

Married persons continued to represent the largest segment of the population 15 years and over at 47% (Table 1). Persons who were never married trailed by 12 percentage points and remained the second leading category. The distribution of the population by marital status remained largely the same in the two most recent censuses; the only changes were 1 percentage point drops in the married and divorced populations. Intercensal changes in proportions by race and Bermudian status were also fairly small and therefore the subsequent analysis focuses on 2016 data.

**Table 1**  
**POPULATION 15 YEARS AND OLDER BY MARITAL STATUS, 2016 AND 2010**

Marital Status	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	54,260	53,733 <sup>1</sup>	100	100	
Married	25,688	24,640	47	48	-1
Never Married	19,087	17,806	35	35	**
Divorced	6,168	5,900	11	12	-1
Widowed	2,862	2,614	5	5	**
Legally Separated	364	273	1	1	**
Not Stated	91	349			

\*\* Less than 1%.

<sup>1</sup> Includes 2,151 persons for whom there is no data - see Technical Note.

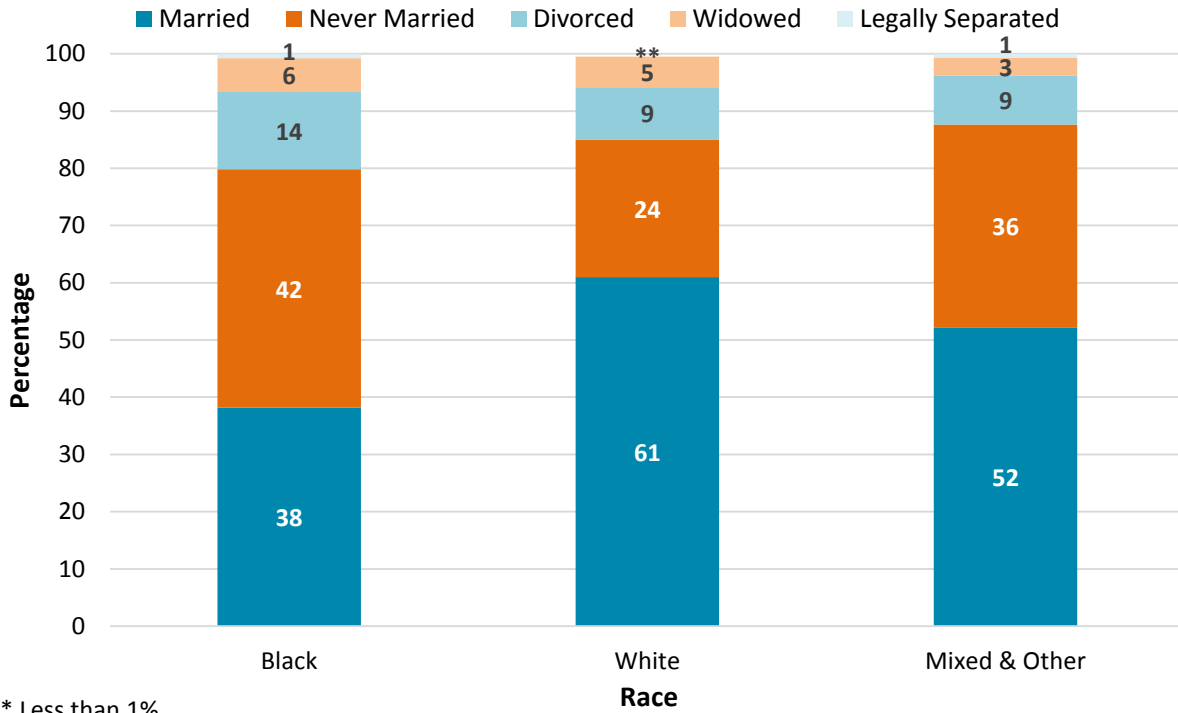

### Race

The majority of the population 15 years and over who were white and of mixed and other races were married (61% and 52%, respectively) compared with 38% of the black population who were married (Figure 1). In contrast, the black population were most likely to be never married (42%). Blacks were also more likely to be divorced and widowed than other racial groups.

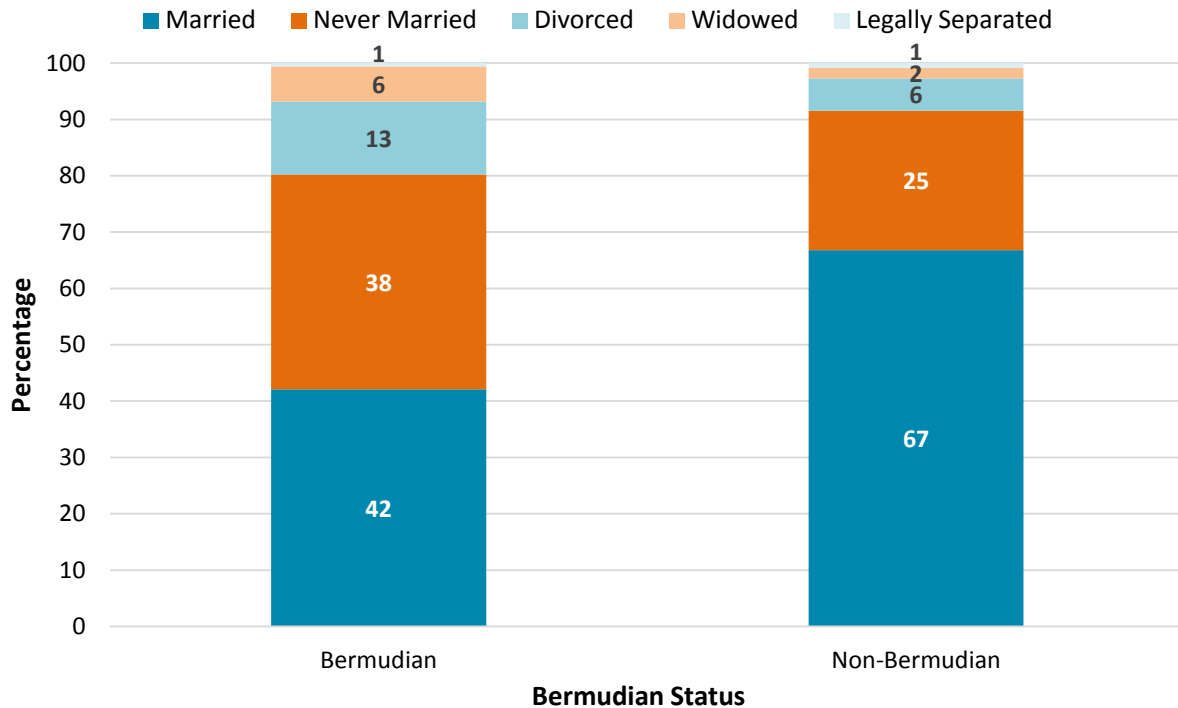

### Bermudian Status

Bermudians and non-Bermudians 15 years and over were both most likely to be married (Figure 2). However, the proportion of non-Bermudians who were married (67%) exceeded that of Bermudians (42%) by 25 percentage points. Bermudians were more likely to be never married, divorced and widowed than non-Bermudians.

**Figure 1**  
**Percentage Distribution of Population 15 Years and Older by Marital Status and Race, 2016**

**Figure 2**  
**Percentage Distribution of Population 15 Years and Older by Marital Status and Bermudian Status, 2016**

## FERTILITY

### Females 15-49 Years

#### Overview

The total female population 15 to 49 years was 14,355 in 2016 (Table 1). Of this population, 754 (or 5%) reported having had at least one live birth during the year May 21, 2015 to May 20, 2016. As some females had multiple live births, the total number for the year was approximately 813 (assuming that all females in the 'three or more' category had 3 live births).

#### Race

White females or females of mixed and other races were equally as likely to have had at least one live birth (6%) and black females were least likely (4%). During the reference period, 321 black females had approximately 348 live births, 260 white females had roughly 277 live births and 173 females of mixed and other races had about 188 live births.

**Table 1**  
**FEMALES 15 TO 49 YEARS BY NUMBER OF LIVE BIRTHS IN PAST YEAR<sup>1</sup> AND RACE OF MOTHER, 2016**

\*\* Less than 1%.

<sup>1</sup> May 21, 2015 - May 20, 2016

<sup>2</sup> Includes 10 persons for whom race was not stated.

#### Bermudian Status

Non-Bermudian females were more likely (7%) to have had at least one live birth during the period than Bermudian females (4%) (Table 2). During the year preceding Census Day, there were approximately 502 live births to 461 Bermudian mothers. This compares to around 311 live births to 293 non-Bermudian mothers.

**Table 2**

### Females 15-49 Years with at Least One Live Birth in Past Year

#### Overview

Of the female population 15 to 49 years who had at least one live birth during the reference period, one-third were 30 to 34 years followed by 27% who were 35-39 years (Table 3). The median age of these mothers was 34 years.

#### Race

Mothers of all races were most likely to be 30-34 years. However, white mothers were 15 percentage points higher than black mothers and 10 percentage points higher than mothers of mixed and other races in this age group. Black mothers were more likely to be in the younger age groups than their counterparts with 36% under the age of 30. For this same age group, mixed and other race mothers had a 29% share and white mothers represented 11%. White mothers had a median age of 35, two years higher than the other two racial groups.

#### Bermudian Status

Bermudian mothers were most likely to be 30 to 34 years (30%), 8 percentage points higher than the second leading age group of 25 to 29 years (Table 4). This differs from non-Bermudian mothers who were most commonly 35 to 39 years (39%), 1 percentage point higher than the 30-34 age group. Bermudian mothers were more than three times more likely than non-Bermudian mothers to be under 30 years which is reflected by median ages of 32 and 35, respectively.

## EDUCATION

### Overview

Data on the highest academic qualifications held by persons 16 years and over indicates educational advancements during the intercensal period. The population without a formal academic certificate declined 10 percentage points to 14% (Table 1). This was offset by percentage point gains for holders of high school certificates (+5), technical or vocational certificates, associate degrees or diplomas (+3) and degrees (+3). High school certificates were still the most common highest academic qualification, representing 35% of the total. The population was more than twice as likely to hold high school certificates or degrees than to have no formal certificates.

### Demographic Characteristics

The overall trend of academic improvements held true for both sexes. The proportion of males without a formal certificate declined by 11 percentage points to 16% (Table 1). Percentage point increases occurred in the remaining specific categories for males, with the largest occurring in the high school certificate category (+7). Females without a formal certificate declined 8 percentage points to 12%. Gains were made in the remaining specific categories with a 4 percentage point increase in females who had high school certificates or degrees. When compared, females still outranked males in their academic standing. Proportionally females were more likely than males to hold either of the two highest academic qualifications with the opposite being true for the two lowest qualifications.

**Table 1**  
**POPULATION 16 YEARS AND OVER BY HIGHEST ACADEMIC QUALIFICATION AND SEX, 2016 AND 2010**

<sup>1</sup> Includes 2,096 persons for whom there is no data - see Technical Note.

All racial groups were less likely to have no formal certificates and more likely to have a higher academic qualification in 2016 (Table 2). Blacks with no formal certificates fell 12 percentage points to 16% and those with high school certificates increased 7 percentage points to 40%. The proportion of whites without a formal certificate dropped 7 percentage points to 10% and increased in the degree category by 4 percentage points to 43%. Persons of mixed and other races fell 9 percentage points to 12% in their share without a formal certificate. This same racial group had a 5 percentage point increase in their distribution reaching 24% in the category of technical or vocational certificates, associate degrees or diplomas. Proportionally whites were most likely (62%) and blacks least likely (44%) to possess either of the two highest academic qualifications. On the other hand, blacks were most likely (56%) and whites least likely (38%) to hold one of the lower two qualifications.

<sup>1</sup> Includes 2,096 persons for whom there is no data - see Technical Note.

Bermudians and non-Bermudians both had percentage point declines in their shares with no formal certificates and had percentage point increases in the remaining specific categories (Table 3). Bermudians with no formal certificates decreased to 15%, a 12 percentage point decline. The largest percentage point increase for Bermudians occurred in the proportion who had a high school certificate, increasing 6 percentage points to 39%. Non-Bermudians without a formal certificate fell 7 percentage points to 7%. The largest increases of 3 percentage points occurred in the two highest categories, with non-Bermudians holding degrees accounting for nearly half (49%). When compared, non-Bermudians continued to outperform Bermudians academically. Seventy percent of non-Bermudians held one of the two highest qualifications, compared to 46% of Bermudians.

# ECONOMIC ACTIVITY

## Overview

The analysis in this section refers to the economic activity of the population 16 years and over during the week preceding Census Day. Among the 53,613 residents who were 16 years and over, 35,530 persons were employed, 2,625 were unemployed, 15,428 were economically inactive and 30 persons did not report their economic activity in 2016.

Figure 1 shows the number of persons 16 years and over by economic activity status. The age composition of the employed and unemployed reflects the age pattern of the total population and the active population growing older. The 50 to 54 age group was the largest group of people in the workforce for males and females. Males and females were most likely to be unemployed at ages 20-24. The largest components of the economically inactive population were male and female seniors.

## Economically Inactive

Of the 15,428 economically inactive population, more than half (54%) were retired, 20% were full-time students not actively seeking work and 11% were engaged in home duties (Table 1). During the intercensal period, the proportion of persons who were unable to work due to a disabling health condition, engaged in voluntary work or retired each advanced 1 percentage point.

**Table 1**  
**ECONOMICALLY INACTIVE POPULATION 16 YEARS AND OVER BY TYPE OF ECONOMIC INACTIVITY, 2016 AND 2010**

Type of Economic Inactivity	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	15,428	12,574 <sup>1</sup>	100	100	**
Retired	8,319	6,712	54	53	+1
Full-Time Student Not Actively Seeking Work	3,032	2,554	20	20	**
Engaged in Home Duties	1,671	1,416	11	11	**
Unable to Work (due to a disabling health condition)	1,174	834	8	7	+1
Not Actively Seeking Work	828	606	5	5	**
Voluntary Work Without Pay	401	273	3	2	+1
Other	3	179	**	1	-1

\*\* Less than 1%

<sup>1</sup> Excludes persons for which there is no data - see Technical Note.

### Labour Force

The week before Census Day, 38,155 persons 16 years and over were in the labour force (Table 2). There was a higher proportion of males (51%) in the labour force than females (49%) as was the case in 2010. The sex ratio of the labour force increased from 102 to 105 males per 100 females.

**Table 2**  
**LABOUR FORCE 16 YEARS AND OVER BY SEX, 2016 AND 2010**

Sex	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	38,155	40,041 <sup>1</sup>	100	100	**
Male	19,585	20,221	51	51	**
Female	18,570	19,820	49	49	**
Sex Ratio	105	102			

\*\* Less than 1%

<sup>1</sup> Includes 64 persons who were counted during the census but detailed data was not obtained - see Technical Note.

Between 2010 and 2016, the labour force participation rate for the population aged 16 to 64 fell 2 percentage points from 85% to 83% (Table 3). The decrease in the labour force participation rate was a result of the decrease in the labour force being greater than the decrease in the total population aged 16 to 64. The labour force participation rate for males rose to 87% while the rate for females fell to 79%.

**Table 3**  
**LABOUR FORCE PARTICIPATION RATES BY SEX, 2016 AND 2010**

Sex	Number		Percentage
	2016	2010	Point Change 2010-2016
Total	83%	85%	-2
Male	87%	85%	+2
Female	79%	82%	-3

### Unemployment

The number of unemployed persons stood at 2,625 in 2016 (Table 4). Fifty-seven per cent of unemployed residents were male and 43% were female. The level of unemployment for a country is usually measured by the unemployment rate. In 2016, Bermuda's unemployment rate was 7%, unchanged from 2010.

#### Sex

Between 2010 and 2016 the unemployment rate for females declined 1 percentage point to 6% while the rate for males remained unchanged at 8%. The sex ratio of the unemployed increased from 116 to 135 males per 100 females in 2016.

#### Age

In 2016, the unemployment rate of 23% for persons 16 to 24 years was the highest among all age groups, 1 percentage point higher than the rate in 2010. The age group 25 to 34 had the second highest unemployment rate of 8%. The lowest unemployment rate of 4% was reported for persons 65 years and older. The median age of the unemployed increased from 37 to 40 years.

#### Race

The unemployment rate for blacks (9%) was triple the rate of whites (3%) whom had the lowest unemployment rate. During the intercensal period, the unemployment rate for whites decreased 2 percentage points while the rate for mixed and other racial groups was static.

#### Bermudian Status

The unemployment rate for Bermudians (8%) was nearly three times the rate of their non-Bermudian counterparts (3%). Between 2010 and 2016, the unemployment rate for Bermudians decreased 1 percentage point and this was offset by a 1 percentage point increase in the non-Bermudian rate.

#### Highest Academic Qualification

Findings from the 2016 Census indicate that there is a strong relationship between unemployment rates and educational attainment; unemployment rates generally declined with increasing academic qualifications. Of the persons who reported that they were unemployed, persons with no formal certificates accounted for the highest unemployment rate of 13%, up 5 percentage points since 2010. The second highest unemployment rate was reported by persons who had attained a high school certificate at 10%. In contrast, the lowest unemployment rate was recorded for persons who acquired a graduate degree.

## **Working Population**

### ***Sex***

The working population was 35,530 in 2016 and represented 66% of the population aged 16 years and over (Table 5). Male workers outnumbered female workers with a 51% share. This represented a shift from the 2010 Census when both sexes comprised half of the working population. In 2016, the sex ratio of the employed increased from 101 to 104 males per 100 females.

### ***Age***

Youth workers (aged 16 to 24) represented the lowest proportion of the working population (5%) in 2016 and lost the most ground over the six-year period by falling 2 percentage points. In contrast, workers aged 55 to 64 recorded a 4 percentage point rise, the highest amongst all age groups, and comprised 21% of the working population. With the exception of the population 65 years and over which recorded a 1 percentage point increase, the remaining age groups each declined by 1 percentage point between 2010 and 2016. The median age of the employed population was 46 years, up from 45 years in 2010.

### ***Race***

In 2016, blacks comprised 51% of the working population, whites represented 30% while mixed and other races comprised 18%. The percentage of whites in the working population decreased marginally. In contrast, the 2016 Census results showed diametric changes among persons who were black and of mixed and other races. The share of black workers fell 3 percentage points and the proportion of workers who reported mixed and other races increased 3 percentage points.

### ***Bermudian Status***

During the intercensal period the percentages of Bermudians and non-Bermudians in the working population did not change. Bermudians continued to comprise 74% of the working population, whereas non-Bermudians accounted for 26%.

**Table 5**

### Industry

The dominant industrial group (based on the Bermuda Classification of Economic Activity, 2003) was Education, Health and Social Work which grew 3 percentage points to 15% in 2016 (Table 6). This sector was followed by the Hotels and Restaurants, International Business Activity and Business Services sectors which each comprised 11% of the working population. Out of these industrial sectors, the Hotels and Restaurants industry made the most gain by increasing 2 percentage points during the intercensal period.

Among the industries that reported negative employment growth, the greatest loss was reported for the Public Administration sector. The proportion of persons employed within this sector shrunk by 3 percentage points to 7% in 2016.

**Table 6**

<sup>1</sup> Includes 64 persons who were counted during the census but detailed data was not obtained - see Technical Note.

## Occupation

Between 2010 and 2016, the occupational groups (based on the Bermuda Standard Classification of Occupations) that recorded proportional increases were the Service Workers & Shop & Market Sales Workers and Professionals. The former increased 2 percentage points to 19% and the latter 1 percentage point to 20%. In contrast, Senior Officials and Managers and Clerks, both shrunk 2 percentage points while Elementary Occupations recorded a 1 percentage point decline. The percentage distribution of the remaining occupational groups remained constant during the intercensal period (Table 7).

## Sex

The share of males employed as Senior Officials and Managers dropped 3 percentage points to 20%. A proportional reduction of the same magnitude occurred for females in the Clerical occupational group, from 28% to 25%. Female Senior Officials and Managers recorded a decline of 1 percentage point during the same period. Conversely, the proportion of male and female Service Workers & Shop & Market Sales Workers both increased 3 percentage points to 17% and 22%, respectively. The proportion of male

Skilled Agricultural and Fishery Workers advanced 1 percentage point. No changes were recorded in the other occupational groups.

### **Race**

During the intercensal period, the proportion of Service Workers & Shop & Market Sales Workers rose 3 percentage points for blacks, 2 percentage points for mixed and other workers whereas the proportion

of whites was static (Table 8). Blacks and mixed and other Professionals both recorded a 1 percentage point increase while the proportion of whites was unchanged. In contrast, there were lower proportions of Senior Officials and Managers in all racial groups. Blacks and whites both recorded a 2 percentage point decline in their representation of this occupation. Persons who were mixed or other marked a 1 percentage point decline in their share of Senior Officials and Managers and Elementary Occupations categories.

### ***Bermudian Status***

The working population by occupational group and Bermudian status shows that the proportion of Bermudians working as Senior Officials and Managers declined 3 percentage points from 2010 to 2016 and those who held clerical jobs also fell 2 percentage points (Table 9). Conversely, the proportional representation of Bermudian Service Workers & Shop & Market Sales Workers and Professionals both rose 2 percentage points.

**Table 9**

Bdn - Bermudian

Non-Bdn - Non-Bermudian

<sup>1</sup> Includes 64 persons who were counted during the census but detailed data was not obtained - see Technical Note.

Non-Bermudian Service Workers & Shop & Market Sales Workers and Skilled Agricultural and Fishery Workers were the only categories to record proportional increases, rising 3 percentage points and 1 percentage point, respectively. The proportion of non-Bermudian Clerks and Professionals decreased by 2 percentage points and 1 percentage point, respectively. All other occupational groups remained unchanged.

### ***Bermudian Workers by Highest Academic Qualification and Race***

Overall, 8% of Bermudian workers had no formal academic certificates (Tables 10 and 11). The same proportion applied to black Bermudian workers while 9% of workers of mixed and other races and 7% of white Bermudian workers fell in this category.

Thirty-seven per cent of Bermudian workers' highest academic achievement was a high school certification. By race, 40% of black Bermudian workers stated that their highest academic qualification was a high school certificate while the same was true for 30% of white Bermudian workers and 37% of Bermudian workers of mixed and other races. Bermudians whose highest qualification was a bachelor's degree or a graduate degree accounted for 29% of the working Bermudian population. By race, 25% of black Bermudian workers employed stated that their highest academic qualification was a bachelor's degree or higher. In contrast, 41% of white Bermudian workers and 28% of Bermudian workers of mixed and other races, achieved a university level degree.

### ***Bermudian Workers by Occupational Status by Highest Academic Qualification and Race***

Black Bermudians were most likely to report to work as Service Workers & Shop & Market Sales Workers, with 3,264 persons employed in this occupational group. The majority of these workers (53%) achieved a high school certificate. This was followed by 15% who attained a technical or vocational certificate as their highest qualification. Among black Bermudian workers, the clerical occupational group ranked second at 19%. Within this group, 47% reported their highest qualification as a high school certificate while 18% completed an associate's degree. Sixteen per cent and 13% of black Bermudians who worked as Clerks obtained a technical/vocational certificate and a bachelor's degree, respectively.

The largest share of white Bermudians worked as Senior Officials and Managers (28%). Out of all workers in this group, 36% persons obtained a bachelor's degree as their highest academic qualification. A further 27% acquired a school leaving certificate. Twelve per cent of white Bermudians who worked as Senior Officials and Managers possessed a graduate degree. In absolute terms, the second largest group of white Bermudians worked as Professionals, representing 21%. Nearly half (46%) of these workers had earned a bachelor's degree while 29% were holders of a graduate degree.

## Hours Worked in Main Job

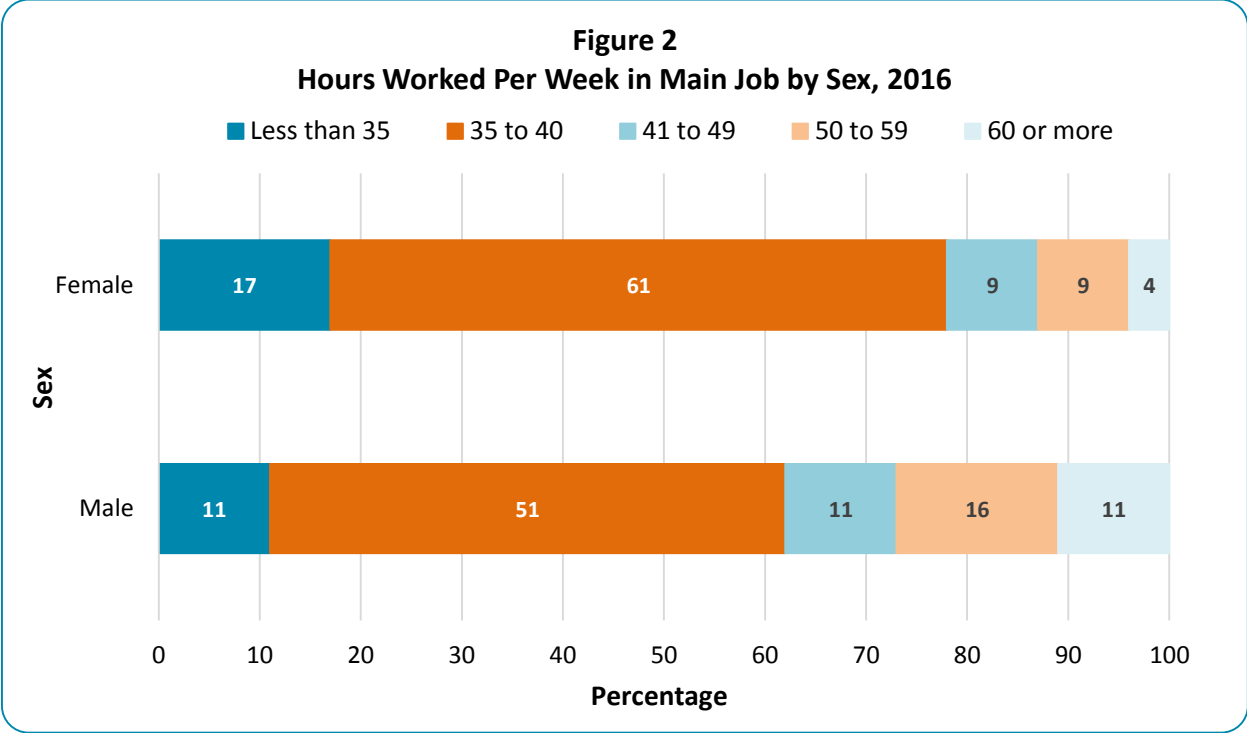

The hours worked groupings for main jobs were configured so that less than 35 hours per week represented part-time work, 35 to 40 hours was full-time employment and 41 hours per week or more was considered full-time employment including unpaid overtime. It is acknowledged that these assumptions will not hold true in all work settings and occupations. A comparison between the distributions of workers by number of hours normally worked in a typical week in their main job shows that the average time spent on the job declined over the period from 41 to 40 hours (Table 12).

In 2010, 32% of employed persons worked 41 hours or more. This decreased by 2 percentage points to 30% in 2016. This reduction was offset by a 2 percentage point rise in the proportion of persons working less than 35 hours and an increase of 1 percentage point for those working 35 to 40 hours per week. On average, males worked 42 hours per week and 4 more hours than females. In 2016, females were more likely to be engaged in part-time and full-time work whereas males were likely to work full-time with overtime (Figure 2).

<sup>1</sup> Includes 24 persons who were counted during the census but detailed data was not obtained - see Technical Note.

**Income from Main Job**

This analysis relates to the working population including full and part-time workers regardless of the number of hours and months worked. An income analysis of full-time workers only who worked 12 months and 35 hours or more per week can be found in the Income section.

**Sex**

The total median gross annual income from main job for all workers was \$58,113 (Table 13). The profile of median annual gross income by sex shows a slight gap between males and females. On average, females earned \$58,652 per year compared to \$57,655 for males, a \$997 difference in pay or 2%.

**Age**

Workers 16 to 24 years and senior workers reported the lowest median income, representing 53% and 68%, respectively of the total median annual gross income from main job. Workers aged 35 to 44 years received the highest median income at \$67,902.

**Race**

The highest median annual gross income of \$77,539 was reported for white workers (133% of the median) while mixed and other workers received the lowest, \$49,962 which was 86% of the median. Black workers earned a median annual gross income of \$53,730 representing 92% of the median.

**Bermudian Status**

In regards to Bermudian status, other non-Bermudian workers recorded the highest median gross annual income at \$70,797 or 122% of the overall median. In addition, non-Bermudian spouses of Bermudians earned \$64,523 followed by Permanent Resident Certificate holders at \$59,707. Bermudian workers’ earnings fell below the overall median at \$56,325.

### **Hours Worked in Main Job**

Workers who normally worked 50 to 59 hours per week, earned the highest median income from their main jobs at \$82,500, followed by workers who worked 60 or more hours per week at \$78,098. The working population that worked 41 to 49 hours per week earned \$69,547 on average.

### **Industry**

In 2016, workers in the International Business Activity sector reported the highest median gross annual income (\$127,680) which was 220% of the median. This industrial sector was followed by Financial Intermediation workers who earned a median income of \$80,372. In contrast, Hotels & Restaurant workers received the lowest income of \$36,826, representing 63% of the median and less than a third of that of International Business Activity workers.

### **Occupation**

Within the occupational groups, workers' earnings in the Senior Officials and Managers (\$91,841), Armed Forces (\$87,000), Professionals (\$86,086) and Technicians and Associate Professionals (\$77,921), groups were significantly higher than the overall median pay for all workers. Service Workers & Shop & Market Sales Workers (\$35,766), workers in Elementary Occupations (\$41,625), Skilled Agricultural and Fisheries Workers (\$42,900) and those working as Plant and Machine Operators and Assemblers (\$43,247) earned far less than the overall median pay.

## INCOME

### Household Income

Total median annual household gross income fell to \$93,713 in 2016 (Table 1), down 10% from 2010. This decline reflected an overall shrinking of the average household size as there were relatively more 1 person households (and thus lower household income) reporting income data for the 2016 Census. Therefore, a greater proportion of households occupied the lower income bands compared to six years prior. The percentage of households in the lowest income band (\$1 - \$36,000) increased 4 percentage points during the 2010 to 2016 period while the highest income band (\$144,000 and over) decreased by 4 percentage points over the same period.

Annual Household Gross Income	Percentage Distribution		Percentage Point Change
	2016	2010	2010-2016
Total	100	100	
\$1 - \$36,000	16	12	+4
\$36,000 - \$71,999	22	21	+1
\$72,000 - \$107,999	19	19	**
\$108,000 - \$143,999	13	14	-1
\$144,000 and Over	30	34	-4
Median Annual Household Gross Income	\$93,713	\$103,657	

\*\* Less than 1%.

### Personal Income

#### Overview

In 2016, the median annual personal gross income from all sources for persons 16 and older (including those without employment e.g. retired and unemployed persons) was \$53,716 (Table 2). The total median income decreased by 8% from 2010 to 2016, compared to a 12% rise in inflation during that same period.

#### Sex

The median annual personal gross income for males at \$55,419 was 7% (\$3,667) higher than for females at \$51,752. The median income for males decreased 9% over the six year period, while the median income for females fell 8%.

#### Race

The sole increase in median annual personal gross income during the intercensal period for racial groups occurred amongst whites (1%), driven largely by white males who experienced a 2% increase in median income.

Blacks had the largest decrease at 13%, as the income levels of both black males and females experienced double-digit percentage declines over the period. Black males experienced the largest decrease in median income of 13% (\$7,281) followed by black females of 12% (\$6,569).

### ***Bermudian Status by Sex***

In 2016, the median annual personal gross income for non-Bermudians (\$66,911) was 31% higher than that reported by Bermudians (\$50,991) (Table 2).

An analysis by Bermudian status and sex indicates that non-Bermudian females had the only gain in median annual personal gross income of 2% (\$1,085) compared to Bermudian males whose median income decreased the most by 10% (\$5,705). Compared to Bermudian males, the median income received by non-Bermudian males was 32% (\$16,946) higher. Similarly, non-Bermudian females received median incomes that were 29% (\$14,401) higher than that received by Bermudian females. Both Bermudian and non-Bermudian males reported higher median incomes than their female counterparts at 5% (\$2,554) and 8% (\$5,099), respectively.

Over the 2010 to 2016 period, median annual personal gross incomes for non-Bermudians decreased 1% (\$479). Bermudians reported a steeper decline with a 9% (\$5,228) lower median income over the same period.

### ***Bermudian Status by Age***

Non-Bermudians' income levels ranked above their Bermudian counterparts at every age group. The disparity in median income was more extreme at the youngest and oldest age groups. For the population of retirement age (65 years and over), non-Bermudian's median income exceeded those of Bermudians by 60%. At the youngest age group of 16-24, the income disparity was 47% higher for non-Bermudians.

### **Income from Main Job**

Median annual gross income from main job for the full-time working population grew 3% to \$65,418 (Table 3). The full-time working population comprises persons who work 35 hours or more per week and 12 months prior to Census Day. This median income level measured higher than the median income level for personal gross income as it only reflects those persons with a full-time job.

### **Sex**

The median income for females reached \$66,496 in 2016, growing 5% from 2010. Males experienced a decline in their median income of less than 1% over the same period. In 2016, median income for males was measured at \$64,283 which was 3% less than females. Conversely, males' median income was 2% higher than females in 2010.

### **Race**

Analysis by race and sex showed increases across every category with the exception of black males who experienced a decline in median annual gross income from main job. White males, the highest income earning group among the working population, earned a median income of \$96,824. This level was nearly one and a half times higher than the median income for the entire working population and 11% more than was earned in 2010. The income level of white males exceeded those of black males by 70% and was 17% higher than the income level of white females.

The disparity between the income level of black males and black females widened over the intercensal period. Black females earned a median annual gross income of \$61,792 which measured 4% higher than in 2010. The median income of black males dipped 3% to \$56,845 in 2016. Black females earned an average of \$1,096 above black males in 2010 and this difference in annual earnings expanded to \$4,947 in 2016.

### **Bermudian Status by Sex**

The breakdown of income by Bermudian status and sex showed that non-Bermudians were the highest income-earners in 2016 with a median annual gross income of \$76,311. This level was 21% higher than the median income for Bermudians. Bermudian males were the only group to record a decline in median income, falling 1% between 2010 and 2016.

### **Bermudian Status by Age**

The prime income earners in 2016 were non-Bermudians in the age group of 35-44 years of age. The median annual gross income for non-Bermudian males was \$80,800 while the median income of non-Bermudian females was even higher at \$82,898. Each age category for both male and female non-Bermudians reported higher median incomes compared to 2010 with two exceptions, females between the ages of 45-54 and males in the 55-64 age group.

Among Bermudians, the top median income was reported for females at \$73,664 within the 35-44 age group. For Bermudian males, the highest median income was \$68,268 within the 45-54 age group, but this still ranked below Bermudian females of the same age range. Relative to 2010, Bermudians under the age of 35 and Bermudian males in the 35-44 age group all had lower median incomes in 2016. Conversely, Bermudian females in the 35-44 age group and all Bermudians who were 45 years and older had median incomes that were higher compared to 2010.

**Table 3**  
**FULL-TIME<sup>1</sup> WORKING POPULATION 16 YEARS AND OVER BY MEDIAN ANNUAL GROSS INCOME FROM MAIN JOB, RACE, BERMUDIEN STATUS, SELECTED AGE GROUP AND SEX, 2016 AND 2010**

\*\* Less than 1%.

<sup>1</sup> 35 hours or more per week and 12 months prior to Census Day.

### **Highest Academic Qualification**

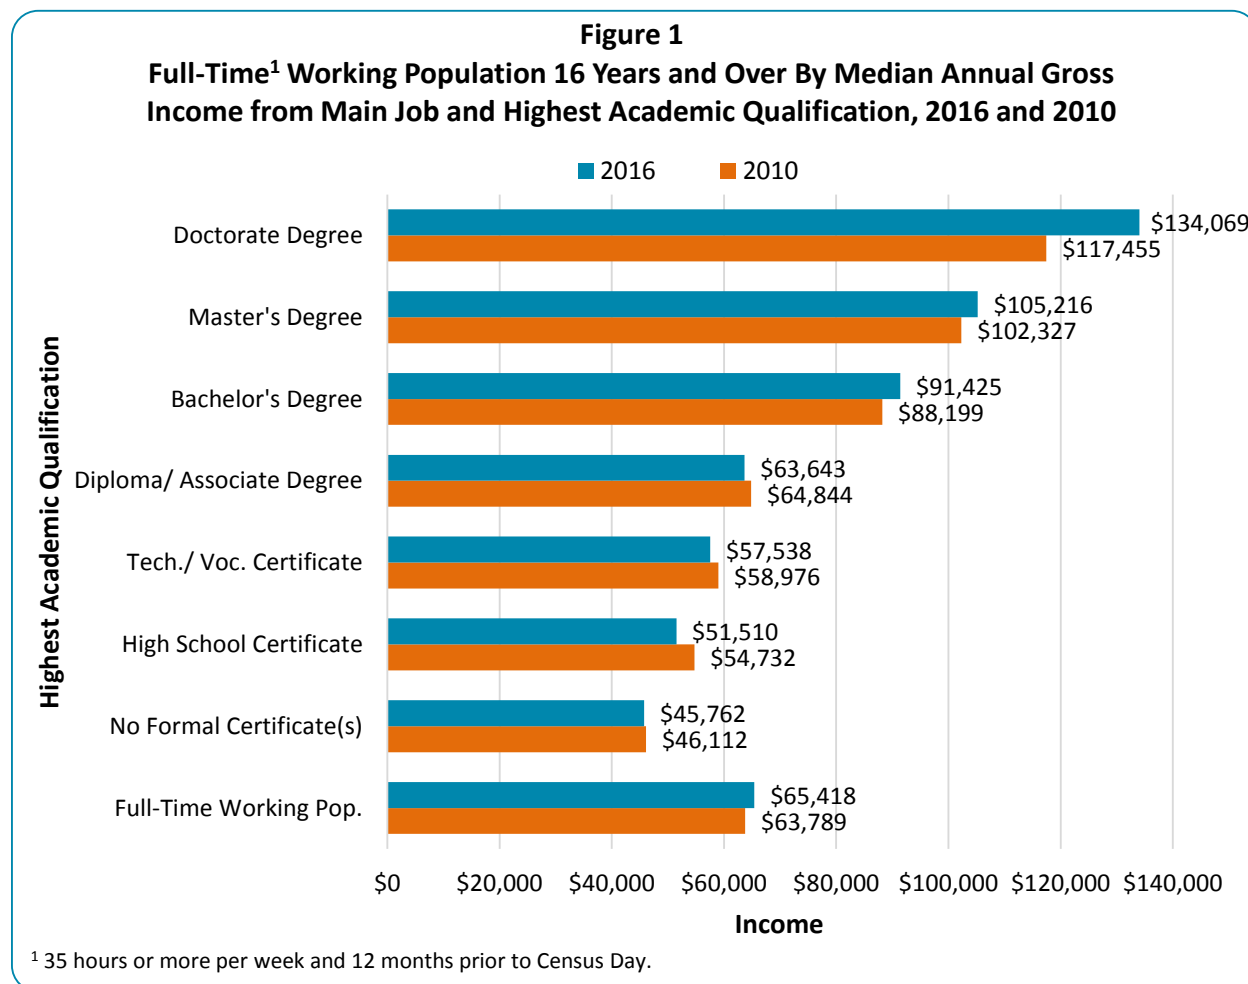

Figure 1 indicates that higher median annual gross incomes from main job for full-time workers are positively correlated with higher academic qualifications. In 2016, members of the working population who possessed a bachelor's degree, master's degree or doctorate degree earned above the median annual gross income. Bachelor's degree holders earned 40% above the median income, master's degree holders earned 61% above the median income and doctorate degree holders earned just over double the median income. Likewise, each of these categories of degree holders experienced rises in their median income compared to their respective 2010 median income levels.

Full-time workers with lower than a bachelor's degree earned below the 2016 median annual gross income level and saw dips in their median income compared to their respective 2010 median income levels. Diploma/associate degree holders earned 3% below the median income in 2016 compared to being 2% above the median income level in 2010. The median income of technical/vocational certificate holders measured 12% below the total full-time working population, worsening 4 percentage points compared to 2010 when the gap was measured at 8%. For high school certificate holders and those with no formal certificates, their median income levels measured below the total working population by 21% and 30%, respectively.

The disparities in median annual gross income levels were pronounced when comparing undergraduate degree holders versus those with lower academic qualifications. The difference between the median income of an undergraduate degree holder (bachelor's degree) and the preceding level of academic

qualification (diploma/associate degree) was \$27,782. This represented a widening of the median income gap from 2010 when the difference was \$23,355.

Comparing post graduate degree holders (master's and doctorate degrees) shows a gap in median annual gross income levels of \$15,128 in 2010 that widened considerably to \$28,853 in 2016.

**Occupation**

Ten major occupational groups were profiled (Table 4), with nine of the ten groups showing increases in median annual gross income from main job for the working population who worked 35 hours or more per week and 12 months prior to Census day. Of these occupations, the greatest increase between 2010 and 2016 was reported for Senior Officials and Managers. This category experienced the largest rise in median income with male and female median incomes increasing 11% each. Occupations within the Armed Forces earned the second highest median income, despite a 3% dip over the intercensal period. Professionals, the third highest income earners, had a 7% rise in median income. Clerks and the occupational group of Service Workers and Shop and Market Sales Workers, which combined to account for one-third of the working population, experienced a 4% and 2% gain in median income, respectively. Services Workers and Shop and Market Sales Workers also represented the lowest median of all income earning groups, unchanged from 2010.

**Table 4**

## HOUSING

There were a total of 28,192 occupied dwelling units in 2016 (Table 1). The two-unit dwelling type remained the most common type of building for Bermuda residents. This building type accounted for 35% of total occupied dwellings, an increase of 1 percentage point during the six-year period. A typical two-unit dwelling can be described as a house with an attached apartment or two attached apartments. The proportion of other building types also increased by 1 percentage point, while the proportion of three-unit dwellings decreased by 1 percentage point. During the same period, the proportion of one-unit dwellings, four or more apartments and group dwellings remained unchanged.

**Table 1**  
**OCCUPIED DWELLING UNITS BY TYPE OF BUILDING, 2016 AND 2010**

Type of Building	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	28,192	26,923 <sup>1</sup>	100	100	
One-Unit Dwelling	6,767	6,280	24	24	**

Four or More Apartments	5,253	5,024	19	19	**
Group Dwelling	751	696	3	3	**
Other	600	308	2	1	+1

\*\* Less than 1%

<sup>1</sup> Includes 1,106 households for which there is no data - see Technical Note.

For the purpose of this analysis, Bermuda's housing stock was limited to occupied private dwelling units and excluded group dwelling units and boats. In 2016, the number of occupied private dwelling units was 27,418 (Table 2).

### Bedrooms

The largest category of private dwelling units had two bedrooms. This category totalled 9,857 private dwelling units and represented over one third of units (36%); the same proportion as in 2010. The proportion of private dwelling units with one bedroom and four or more bedrooms also remained static. Private dwelling units with three bedrooms decreased 1 percentage point while dwelling units without a bedroom increased 1 percentage point over the intercensal period.

**Table 2**  
**PRIVATE DWELLING UNITS BY NUMBER OF BEDROOMS, 2016 AND 2010**

Number of Bedrooms	Number		Percentage Distribution		Percentage Point Change 2010-2016
	2016	2010	2016	2010

Not Stated	1	141			

\*\* Less than 1%

<sup>1</sup> Includes 1,106 households for which there is no data - see Technical Note.

### Full Bathrooms

The majority of private dwelling units had one full bathroom in 2016 (Table 3). This housing structure continued to represent the largest proportion of private dwelling units at 59%, a decrease of 2 percentage points since 2010. Private dwelling units with two full bathrooms and three or more full bathrooms increased by 1 percentage point and 2 percentage points, respectively.

**Table 3**  
**PRIVATE DWELLING UNITS BY NUMBER OF FULL BATHROOMS, 2016 AND 2010**

Number of Full Bathrooms	Number		Percentage Distribution		Percentage Point Change 2010-2016
	2016	2010	2016	2010

Three or More	2,705	2,046	10	8	+2
Not Stated	1	135			

\*\* Less than 1%

<sup>1</sup> Includes 1,106 households for which there is no data - see Technical Note.

### Type of Tenure

The proportions of owner-occupied and non-owner occupied private dwelling units were nearly identical in 2010 and 2016 (Table 4). Non-owner occupied accommodations accounted for 52% of the housing stock, while owner-occupied private dwelling units accounted for 48%. During the intercensal period,

the proportion of non-owner occupied private dwelling units increased 1 percentage point. Conversely, the proportion of owner-occupied private dwelling units decreased 1 percentage point.

Private dwelling units that were owned without a mortgage increased 1 percentage point during the intercensal period, while those that were owned with a mortgage decreased 2 percentage points. The proportion of private dwelling units that were rented as partly or fully furnished increased 1 percentage point, whereas those that were rented as unfurnished decreased 1 percentage point. Rent-free accommodations remained unchanged at 4%.

**Table 4**  
**PRIVATE DWELLING UNITS BY TYPE OF TENURE, 2016 AND 2010**

Type of Tenure	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	27,418	26,200 <sup>1</sup>	100	100

Owned without a mortgage	7,483	6,417	27	26	+1
Owned with a mortgage	5,784	5,821	21	23	-2
Not Stated	11	133			

\*\* Less than 1%

<sup>1</sup> Includes 1,106 households for which there is no data - see Technical Note.

### Monthly Rents

Nearly 6 out of 10 rented private dwelling units (59%) were rented for \$1,500 or more per month (Table 5). The largest proportion of private dwelling units (27%) were rented for between \$1,000 and \$1,499 per month. The median rent for private dwelling units was \$1,705 per month, a decrease of less than 1% when compared to 2010.

During the intercensal period, the proportion of rented private dwelling units that were rented for \$1,500 to \$1,999, and \$1,000 to \$1,499 per month, increased by 3 percentage points and 2 percentage points, respectively. In contrast, the proportion of private dwelling units that were rented for \$2,000 to \$3,999 per month decreased by 2 percentage points. The other monthly rental categories each decreased by 1 percentage point.

**Table 5**  
**RENTED PRIVATE DWELLING UNITS BY MONTHLY RENT, 2016 AND 2010**

Monthly Rent	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016

Not Stated	291	568			
Median	\$1,705	\$1,712			

### Monthly Mortgages

Eight out of ten owner-occupied private dwelling units paid a monthly mortgage of \$2,000 or more per month (Table 6). One third of private dwelling units that were owner-occupied with a mortgage had a mortgage between \$3,000 and \$4,999 per month. In 2016, the median monthly mortgage payment was \$3,400, an increase of 3% over the intercensal period.

**Table 6**  
**OWNER-OCCUPIED PRIVATE DWELLING UNITS WITH A MORTGAGE BY MONTHLY MORTGAGE, 2016 AND 2010**

## HOUSEHOLDS

### Households by Number of Persons

There were a total of 28,192 households in 2016 residing in private dwelling units, group dwelling units or boats (Table 1). One-person households was the most common living arrangement and represented over one third (34%) of households. The proportion of one-person households increased 3 percentage points over the intercensal period. Households with four persons or five or more persons had decreased percentage distributions of 2 percentage points and 1 percentage point, respectively.

During the intercensal period, the average household size declined due to the aforementioned changes. On average, there were 2.39 persons per household in 2010 and 2.26 persons per household in 2016.

**Table 1**  
**HOUSEHOLDS BY NUMBER OF PERSONS, 2016 AND 2010**

Number of Persons	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016

\*\* Less than 1%

<sup>1</sup> Includes 1,106 households for which there is no data - see Technical Note.

### Households by Type

The One Person household type was the only household type to experience proportional growth (Table 2). This household type increased 3 percentage points over the six-year period. It also represented the largest proportion of household types with more than one out of three households (34%) being a One Person household. The proportion of One Parent and Two Parent household types declined 2 percentage points and 1 percentage point, respectively. The remaining household types experienced no change during the intercensal period.

**Table 2**  
**HOUSEHOLDS BY TYPE OF HOUSEHOLD, 2016 AND 2010**

Type of Household	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016

<sup>1</sup> Includes 1,106 households for which there is no data - see Technical Note.

### One Parent Households by Demographic Characteristics of Household Reference Person

#### Sex

The One Parent household type continued to be dominated by female HRPs. In 2016, nearly nine out of ten (87%) One Parent households were headed by mothers with child(ren) (Table 3). The proportion of mothers with child(ren) increased six percentage points during the intercensal period. In contrast, the proportion of fathers with child(ren) decreased six percentage points. This resulted in a decline in the sex ratio of lone parent HRP'S from 23 to 15 males per 100 females.

#### Age

The majority of HRPs of One Parent households (47%) fell within the 45 to 64 age group. Proportionally, this age group remained unchanged over the six-year period. Conversely, the 30 to 44 age group advanced 4 percentage points and the under 30 and the 65 years and over age groups both decreased 2 percentage points. As a result, the median age for lone parents increased from 49 to 50 years.

#### Race

In 2016, black parents represented 7 in 10 One Parent households (70%), an increase of 1 percentage point. The proportion of lone parents of mixed and other races increased 2 percentage points while households headed by a white parent decreased 3 percentage points between 2010 and 2016.

#### Bermudian Status

The majority of HRPs of One Parent households possessed Bermudian status (93%). This represented a decrease of 2 percentage points between 2010 and 2016. In contrast, the proportion of lone parents who were non-Bermudian increased 2 percentage points over the same period.

#### Economic Activity

Nearly 8 out of 10 HRPs of One Parent households (79%) were working during the reference week; an increase of 7 percentage points during the intercensal period. This was offset by the proportion of lone

parents who were unemployed which decreased 7 percentage points whereas parents with child(ren) who were economically inactive decreased 1 percentage point.

## INSTITUTIONS

### Overview

The institutional population declined from 822 persons in 2010 to 711 persons in 2016 (Table 1). There were 9 centenarians in 2016, up from 7 in 2010. The population in rest and nursing homes represented 44% of the total institutional population in 2016, replacing the correctional facilities' population as the leading category. Correctional facilities and hospitals and hospices round out the top three most populated categories at 26% and 19%, respectively. The population in rest and nursing homes had the largest percentage point increase (+13) and the correctional facilities' population had the largest percentage point decrease (-8). Profiles of the three largest types of institutions are provided in the following analysis.

Type of Institution	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016
Total	711	822	100	100	
Rest and Nursing Homes	314	252	44	31	+13
Correctional Facilities	182	276	26	34	-8
Hospitals and Hospices	136	179	19	22	-3
Homes for the Physically Challenged and Rehabilitation Centres	48	39	7	5	+2
Adult Shelters	28	52	4	6	-2
Children's Homes	3	24	**	3	-3

\*\* Less than 1%.

### Rest and Nursing Homes

Rest homes provide care for persons who require minimal assistance with activities of daily living whereas nursing homes provide care for persons who require more extensive assistance. Females continued to represent the majority (61%) of the 314 persons in these homes, although there was an 8 percentage point decline in their distribution (Table 2). The sex ratio increased from 46 to 64 males per 100 females.

Forty-two percent (42%) of the population were 80 to 89 years old, down 3 percentage points from 2010. As the only age group to have increased in its share, the population 90 years and older represented a quarter of the rest and nursing home population. During the intercensal period, the median age increased from 84 to 85 years.

The racial distribution of the rest and nursing home population changed little during the intercensal period. Blacks declined 1 percentage point to 70% and mixed and other races increased 1 percentage point to 3%. The proportion of whites remained at 27%.

The Bermuda-born population increased its share by 4 percentage points to 88%. In contrast, the foreign-born population declined 4 percentage points to 12%.

Bermudians represented 94% of this population, declining 2 percentage points. Non-Bermudians comprised the remaining 6%, a 2 percentage point increase.

\*\* Less than 1%.

.. Not asked in 2010.

Nearly all persons (98%) in rest and nursing homes reported having health insurance. FutureCare was the most selected response option, representing 60% of the total.

In terms of marital status, the widowed remained the leading category at 43% for both census years. This was followed by the divorced (22%) and never married (21%) categories. Divorcees had the largest percentage point increase (+3) and persons who were never married had the largest percentage point decrease (-5).

The proportion of the rest and nursing home population with no formal academic certificates declined 20 percentage points to 57%. The second leading category was high school certificates which climbed 18 percentage points to 25%. Degree holders were the second leading category in 2010 but became the least selected category in 2016 at 6%.

### **Correctional Facilities**

Correctional facilities work with the island's inmates towards rehabilitation upon release. Males accounted for 94% of the 182 inmates in correctional facilities, although the proportion of males declined 2 percentage points (Table 3). The result was a decline in the sex ratio from 2,660 to 1,555 males per 100 females.

The population aged 25 to 34 years continued to be the most populated age group, gaining 9 percentage points to 41%. The 45 years and older category was second at 28%, an increase of 6 percentage points. In contrast to increases in these age groups, the population under 25 years and 35 to 44 years declined by 8 and 7 percentage points, respectively. The median age declined from 36 to 35 years.

The proportion of the correctional facilities' population that were black increased 7 percentage points to 98%. Whites had the largest percentage point decrease (-5), falling to 2%.

A larger proportion of inmates were Bermuda-born in 2016, increasing 7 percentage points to 94%. Conversely, the foreign-born population fell 7 percentage points to 6%.

The distribution and intercensal changes for Bermudian status were similar to nativity. The 7 percentage point gain in the Bermudian population to 95% was offset by the 7 percentage point decrease in the non-Bermudian population to 5%.

All persons in correctional facilities were reported to be uninsured. However, if an inmate required medical treatment the Government would cover the expense.

The most significant intercensal changes in the marital status profile of the correctional facilities' population occurred in the never married and married categories. Inmates who were never married continued to represent the vast majority (87%) of the population and increased 6 percentage points. The proportion of married inmates fell 5 percentage points to 6%.

The proportion of inmates that held a high school certificate increased 34 percentage points to become the majority at 52%. In contrast, inmates that had no academic qualifications declined 36 percentage points to a 39% share.

### **Hospitals and Hospices**

Bermuda's hospitals provide services to persons with medical and mental health needs. The hospice provides care for terminally ill patients. There was a shift during the intercensal period in the sex distribution, with males now comprising the majority (57%) of the 136 persons in hospitals and hospices, an increase of 11 percentage points (Table 4). As a result, the sex ratio increased from 85 to 134 males per 100 females.

\*\* Less than 1%.

.. Not asked in 2010.

Despite a 15 percentage point decline in the distribution of the population aged 65 to 84 years, this age group still had the largest share at 35%. The two youngest age groups, under 44 and 45 to 64 years, had percentage point increases of 9% and 7%, respectively. The result of these shifts was a decline in the median age from 76 to 67 years.

The racial composition in hospitals and hospices changed little over the period. The proportion of blacks (85%) and whites (13%) remained constant. The mixed and other races category declined from 2% to 1%.

The Bermuda-born population increased 3 percentage points to 94%. The corresponding 3 percentage point drop in the foreign-born population led to a 6% distribution.

Nearly all (99%) of the population in hospitals and hospices were Bermudian, increasing 1 percentage point. The proportion of the population that were non-Bermudian fell 1 percentage point to 1%.

The health insurance status of the population indicated that 81% were insured. FutureCare was the most commonly selected health insurance coverage, representing 35% of all responses.

The population who were never married increased 7 percentage points to remain the leading category at 48%. The largest percentage point increase (+10) during the intercensal period occurred in the population who were married to secure a 25% share of the total hospitals and hospices population. The proportion of persons who were widowed declined 24 percentage points to 10%.

The most significant decline occurred in the population with no formal certificates, falling 8 percentage points to 50%. Despite this decline, it remained the most common highest academic qualification category selected. The population with high school certificates as their highest academic qualification had the largest percentage point increase (+10) to remain the second leading category at 39%.

## NON-SHELTERED

### Geographical Distribution

The number of non-sheltered persons counted between 2010 and 2016 increased from 82 to 138, equating to 1 in 463 persons being non-sheltered (Table 1). In 2016, the leading three parishes for non-sheltered residents were Pembroke (59%), St. George's (9%) and Sandys (9%). However, the City of Hamilton contained 42% of the non-sheltered population which far exceeded the second ranked parishes.

Although the majority of non-sheltered persons were located in Pembroke in both census years, Pembroke's percentage share declined 15 percentage points in 2016. The result of this was for the distribution of the non-sheltered population to be more dispersed in 2016 with proportional increases in St. George's, Hamilton Parish, Smith's, Devonshire, Paget and Sandys.

**Table 1**  
**NON-SHELTERED POPULATION BY PARISH AND MUNICIPALITY, 2016 AND 2010**

Parish and Municipality	Number		Percentage Distribution		Percentage Point Change
	2016	2010	2016	2010	2010-2016

Sandys	12	0	9	0	+9

\*\* Less than 1%.

### Demographic Characteristics

In 2016, 88% of non-sheltered residents were male compared with 90% in 2010 (Table 2). In absolute terms, there were 47 more males and 9 more females in 2016. The sex ratio decreased from 925 to 712 males per 100 females.

Two-thirds of non-sheltered persons were aged 40-64 years in 2016, a two percentage point increase from 2010. The most significant shift during the intercensal period was the 8 percentage point decline in the 20-39 age group and an 8 percentage point increase in the 65 years and over age group. A further indicator of an aging non-sheltered population is the rise in the median age from 52 years in 2010 to 56 years in 2016.

\*\* Less than 1%.

The racial profile of the non-sheltered population was less diverse in 2016, as the proportion of blacks increased from 80% to 93%. The proportion of whites and mixed and other races declined 8 and 5 percentage points, respectively.

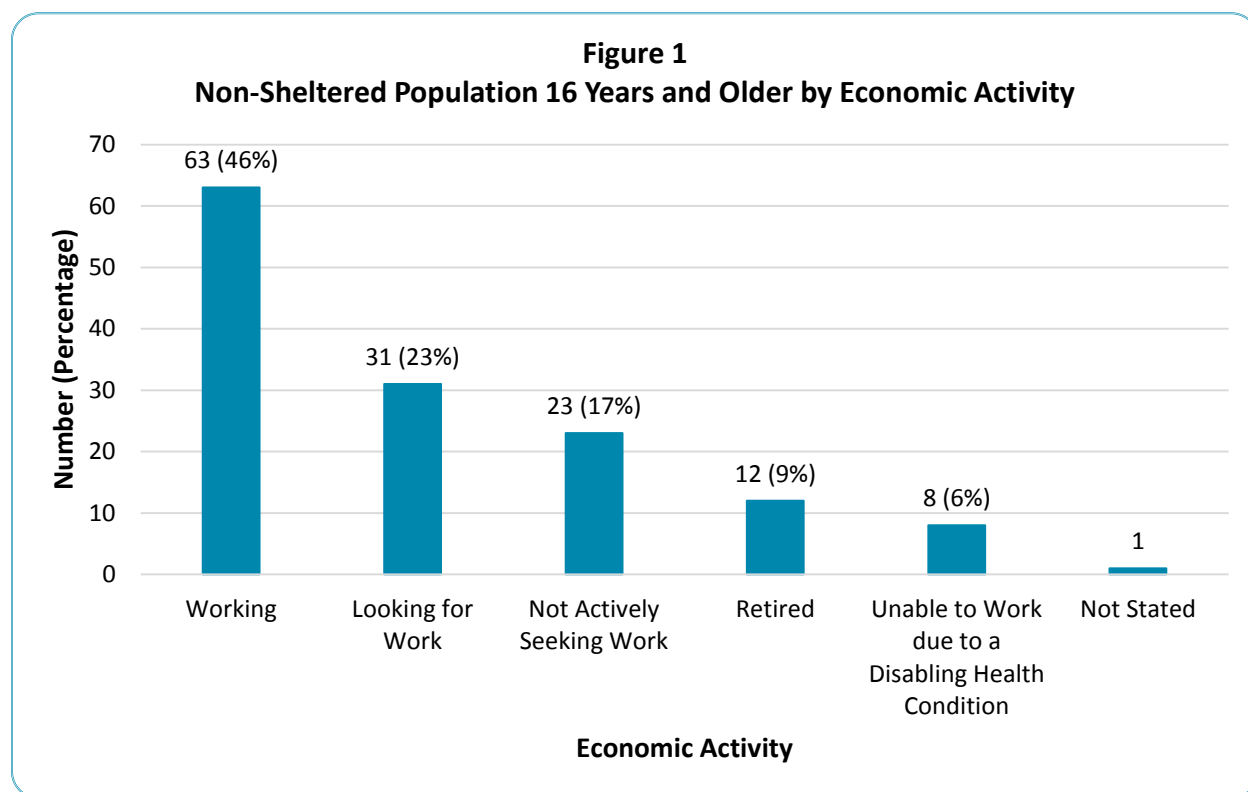

The Bermuda-born non-sheltered population edged up 1 percentage point to 97%. The foreign-born population declined 1 percentage point to 3% in 2016. The proportion of Bermudian non-sheltered persons remained unchanged at 99%.

Sixty-nine percent of the non-sheltered population were never married, up 19 percentage points from 2010. The divorced non-sheltered population had the largest proportional decline, falling 18 percentage points to 19%.

Half of the non-sheltered residents reported having no formal academic certificates in 2016, an increase of 7 percentage points. This was followed by 36% possessing a high school certificate, a 3 percentage point decline in its share. The third highest category was Technical, Vocational or Associate Degree at 13% which declined 5 percentage points.

### Economic Activity

The questions on economic activity, industry and occupation were asked of the non-sheltered population for the first time in 2016. During the reference week, 46% of non-sheltered persons were working (Figure 1). This exceeded the next most common category 'Looking for Work' by double. The unemployment rate was 33%.

Of the 63 persons who reported working, 46% were in the Construction industry (Table 3). Other double-digit percentages were Wholesale Trade & Repair Services (16%) and Hotels & Restaurants (13%).

**Table 3**  
**NON-SHELTERED WORKING POPULATION 16 YEARS AND OLDER BY INDUSTRIAL GROUPS, 2016**

<b>Industrial Groups</b>	<b>Number</b>	<b>Percentage Distribution</b>
Total	63	100
Construction	29	46
Wholesale Trade & Repair Services	10	16
Hotels & Restaurants	8	13
Business Services	5	8
Agriculture, Forestry, Fishing, Mining & Quarrying	2	3
Retail Trade & Repair Services	2	3
Transport & Communications	2	3
Real Estate & Renting Services	2	3
Public Administration	2	3
Other Community & Personal Services	1	2

The leading three occupational groups for the non-sheltered persons were Craft and Related Trades Workers (44%), Elementary Occupations (33%) and Service Workers and Shop and Market Sales Workers (11%) (Table 4). At the specific occupation level, 23% reported being a Building Construction Labourer, 20% were a Handyman/ Utility Person and 17% were a General Painter.

**Table 4**  
**NON-SHELTERED WORKING POPULATION 16 YEARS AND OLDER BY OCCUPATIONAL GROUPS, 2016**

<b>Occupational Groups</b>	<b>Number</b>	<b>Percentage Distribution</b>
Total	63	100
Craft and Related Trades Workers	28	44
Elementary Occupations	21	33
Service Workers and Shop and Market Sales Workers	7	11
Professionals	3	5
Plant and Machine Operators and Assemblers	2	3
Clerks	1	2
Skilled Agricultural and Fishery Workers	1	2
