Message from the Minister

This volume presents population, housing and agriculture/fisheries statistics from the 2020 Census of Population, Housing and Agriculture. The 2020 Census included questions on agriculture and fisheries, first asked in 2015, in order to provide updated data to better measure the level of food security and economic sustainability of households in the Republic. In line with international and regional initiatives, the 2020 Census was also designed to better disaggregate data by gender as well as incorporating Washington Group disability questions. The 2020 Census also included questions to capture data on renewable energy, including energy-efficient appliances to be able to produce data in support of the 2030 Sustainable Development Agenda. The 2020 Census was undertaken by the Office of Planning and Statistics, with funding support from the U.S. Department of the Interior, Office of Insular Affairs, and technical assistance from SPC's Statistics for Development Division (SDD) which provided assistance for development, implementation and processing.

The Republic of Palau continues to develop relevant and up-to-date information about our island's people and resources. In many ways, statistics on the demographic, social, economic, agriculture and housing characteristics of Palau's population contained in this volume will fulfill that need. Planners and decision-makers in both the public and private sectors will find these statistics useful in formulating plans and policies requiring these economic, social and environmental data to ensure overall development of our people, environment, society, and our country will grow economically and more resilient.

Mesulang,

Kaleb Udui, Jr.

Message from the Bureau of Budget and Planning

The Bureau of Budget and Planning would like to present to you the 2020 Census of Population, Housing and Agriculture Publication. It has been a monumental undertaking; from preparation, to field work, to data entry, to editing and tabulation, and finally producing the final report. We would like to acknowledge the funding support from the US Department of the Interior, Office of Insular Affairs, which enabled us to successfully undertake this project. We also extend our appreciation to the Secretariat of the Pacific Community, Statistics for Development Division (SPC-SDD) in providing technical support throughout the entire project.

The Office of Planning and Statistics was responsible for the collection of the 2020 Census and will also be tasked with analyzing and interpreting the data. The SPC-SDD provided technical assistance to ensure the expedience of the processing and production, and to maintain regional standards and conventions. With the support of the Office of Palau Automated Land and Resources Information System (PALARIS), the census enumeration was made easier with updated maps that were used by the enumerators to find houses more efficiently and PALARIS staff assisting daily in the enumeration.

We also would like to extend our appreciation and acknowledge the support provided by the Ministry of Finance's Bureau of the National Treasury and the Bureau of Public Services System for assisting us in streamlining processes which made hiring of census staff and processing payments; the enumerators, coders and keyers who worked tirelessly and professionally in collecting data, coding and keying and making sure enumeration continued uninterrupted.

Finally, we would like to thank the people and those residing in Palau for their cooperation in providing requested information to the enumerators of the 2020 Census.

We hope that the users of statistics make full use of this report, enabling better planning and policy formulation for the sustainable development of our Republic of Palau.

Casmir E. Remengesau
Director

Preface and Acknowledgments

The 2020 Census of Population, Housing and Agriculture is the third comprehensive data collection of population and housing characteristics and the second data collection on agriculture included with population and housing taken by the Republic since Compact Implementation in October 1994. The Republic of Palau follows a quinquennial census cycle, but due to lack of funding in 2010, it was not possible to conduct the census. In 2012, a mini census was conducted to get an idea of the population and housing characteristics, and included education, but did not incorporate all relevant indicators. The 2020 Census follows the 1995, 2000, 2005 and 2015 Censuses, with the 1995 Census as our first official mid-decade census.

The 2020 Census of Palau contains basic tables, which can be used immediately for planning and policy determination. A second volume, the Census monograph, will contain analyses of trends and comparisons of all censuses, and is planned to be published in October 2022.

We would like to acknowledge the support from the United States Department of the Interior, Office of Insular Affairs, for the funding support which enabled us to conduct this very important project that would update our statistics used for planning and policies.

The Secretariat of the Pacific Community-Statistics for Development Division (SPC-SDD) were invaluable in providing us technical support in the questionnaire designs that were in line with international and regional standards, and prepared the data entry programs that enabled us to input the data into the system. The edits and tabulations were also processed by the SPC-SDD, and we are truly grateful for their support.

We also would like to acknowledge the people and residents of Palau who welcomed us to their homes and took the time to answer the questions. We acknowledge the support given us by the Bureau of National Treasury who made sure payments were made on time and in line with regulations, the Bureau of Public Services System who made it simple for us to contract out the enumeration, the Office of Budget Management who made sure our budget was enough to cover our expenses, the Office of PALARIS which provided updated maps which made it easier to find houses, the enumerators, supervisors and quality control officers who worked so hard and so professionally to make sure all households were covered and all questions answered.

APPENDIX A.
Area Classifications

These definitions are for all geographic entities and concepts that the Office of Planning and Statistics will use for its 2020 Census data products.

GEOGRAPHIC PRESENTATION

A hierarchical geographic presentation shows the geographic entities in a superior/subordinate structure in census products. This structure is derived from the legal, administrative, or a real relationships of the entities. The hierarchical structure is depicted in report tables by means of indentation. The following structure is used for the 2020 Census of the Republic of Palau:

Republic of Palau
 State
 Hamlet
 Enumeration Area

ENUMERATION AREA

Enumeration Areas (EA) were the geographic level used for data collection. In most cases, one enumerator counted all of the population and housing units in a single Enumeration Area. Hamlets in Babeldaob and Outer Islands was made up of about 2 to 8 EAs, and Koror had EAs ranging from 2 to 12.

HAMLETS

Hamlets were the next level in the geographic hierarchy. Several Enumeration Areas combined to create the 12 hamlets on Koror, and the various hamlets in the other States. Each hamlet is represented by a unique two-digit code.

STATE

Hamlets were grouped geographically to make up the Republic of Palau's 16 States. Most tabulations appear by State in the publications and in the computer files. Each State is represented by a two-digit code, arranged in order, from the north to the south of the Republic

APPENDIX B.
DEFINITION OF TERMS AND CONCEPTS

POPULATION CHARACTERISTICS

AGE

Data on *age* were derived from answers to questionnaire Section C, item C3 (date of birth). The information was based on the completed age of the person (in years) as of April 13, 2020.

Data on *age* are used to determine the applicability of other questions and to classify other characteristics in census tabulations. Age data are needed to interpret most social and economic characteristics used to plan and examine many programs and policies. Therefore, *age* was tabulated by single years of age and by other groupings, such as 5-year age groups. Where tabulations are shown for families or households, data refer to the age of the householders.

Median Age - This measure divides the age distribution into two equal parts: one-half of the cases fall below the median age and the other half above it. Generally, median age was computed on the basis of more detailed age intervals than are shown in census tabulations; thus, a median based on a less detailed distribution may differ slightly from a corresponding median for the same population based on a more detailed distribution. (For more information on medians, see the discussion under *Derived Measures*.)

Limitation of the Data - As observed in every census, respondents tended to round off their age if their birthdays fell close to the enumeration period. The problem was more pronounced at age 0 because infants lost to age 1 may not have been fully offset by the inclusion of babies born after the Census Day.

Comparability - Age data have been collected in every census. When age was unknown, the assignment of age had been performed by a general procedure described as imputation. The specific procedures for imputing age have been different in every census.

CITIZENSHIP

Data on citizenship were derived from answers to questionnaire Section C, item C6, which was asked of all persons. Data on citizenship provide information on the proportion of citizens and immigrants in the country. The nine categories of citizenship adopted in the 2020 census were as follows:

- (1) Palauan;
- (2) Dual Palauan; - Due to a new law, *Republic of Palau Public Law (RPPL) 9-3*, Palauans who held different citizenships were able to retain that citizenship and acquire Palauan citizenship as well;
- (3) U.S., including U.S. territory such as Guam, American Samoa, etc.;
- (4) China; (5) Bangladesh; (6) Japan; (7) FSM; (8) Philippines; (9) Other.

Limitation of the Data - Some persons may have reported themselves as citizens although they have not yet renounced their foreign citizenship, or just claim to be citizens just because they are Palauans. In Palau Constitution, a person is considered a Palauan when he or she has a Palauan ancestry.

Comparability - The 2020 census data on citizenship are comparable to some extent with those of 1990, 1995, 2000, 2005 and 2015. The 2020 census tabulations presented breakdown of Palau citizens: *Palauan* and *Dual Palauan*, the second category of which did not appear in the 2005 Census.

EDUCATIONAL ATTAINMENT, MAJOR IN COLLEGE, AND TRAINING AT PCC

Data on educational attainment were derived from answers to questionnaire Section C, item C17, which were asked of all persons. The question included response categories which allowed persons to report having reached the 12th grade without receiving a high school diploma. Respondents were to report as *high school graduate/s* persons who received either a high school diploma or the equivalent, passed the Test of General Education Development (G.E.D.), and did not attend college.

Enumerators were instructed that schooling completed in foreign or ungraded school systems should be reported as the equivalent level of schooling in the regular American system; that vocational certificates/ diplomas from vocational, trade, or business schools or colleges were not to be reported unless they were college level degrees; and that honorary degrees were also not to be reported. The instructions gave *medicine, dentistry, chiropractic medicine, optometry, osteo-pathic medicine, pharmacy, podiatry, veterinary medicine, law and theology* as examples of professional school degrees. Excluded from the professional school degree category were *barber school, cosmetology or other training for specific trade*.

Data on educational attainment were tabulated for persons 25 years old and over. In the tabulations, persons were classified according to the highest grade of school completed or the highest degree received.

High School Graduate or Higher - included persons whose highest degree was a high school diploma or its equivalent, persons who attended college or professional school, and persons who received a college, university, or professional degree.

Not Enrolled, Not High School Graduate - included persons of compulsory school attendance age who were not enrolled in school and were not high school graduates; these persons may be taken to be *high school dropouts*. There was no restriction when they dropped out of school, and they may have never attended high school.

Major in College and Training - Persons who responded to question Section C item C17 that they were high school graduates or higher were asked in question item C19 their major in college or vocational school. Question item C18 further asked where any of the course of study or training was. The 2020 census tabulations presented data on *major in college* for persons 18 years old and over only.

Comparability - Educational attainment questions were first asked in the 1970 census. In the censuses of 1960 through 1980, a two-part question asking highest grade of school attended and whether that grade was finished was used to construct highest grade or year of school completed. For persons who have not attended college, the response categories in the 2020 educational attainment question should produce data which are comparable to data on highest grade completed from earlier censuses.

Response categories for persons who have attended college were modified from earlier censuses because there was some ambiguity in interpreting responses in terms of the number of years of college completed. For instance, it was not clear whether *completed the fourth year of college, completed the senior year of college, and college graduate* were synonymous. Research conducted shortly before the census suggested that these terms were more distinct in 1990 and subsequent censuses than in earlier decades, and this change may have threatened the ability to estimate the number of *college graduates* from the number of persons reported as having completed the fourth or higher year of college. It was even more difficult to make inferences about post-baccalaureate and *Associate* degrees from highest year of college completed. Thus, comparisons of post-secondary educational attainment in this and earlier censuses should be made with great caution.

EMPLOYMENT STATUS

Data on employment status were derived from answers to questionnaire Section E, which were asked of persons 12 years old and over. The series of questions on employment status was designed to identify, in this sequence:

- (a) persons who were in paid employment any time during the reference week;
- (b) persons who did unpaid employment (subsistence, helped in family farms, or basic household chores), including volunteer work;
- (c) persons who were not in the labor force, like students, retirees, unemployed and disabled;
- (d) persons who did not do such work during the reference week, but were looking for work to earn money during the last 4 weeks and were available for work during the reference week.

The employment status data shown in the census tabulations relates to persons 16 years old and over. Though the questions on employment status were asked of persons including those with age 12 to 15 years, by definition, these persons are classified as *Not in the labor force*.

Labor Force - All persons classified in the labor force.

Employed - All persons who were 16 years old and over who were either

- (a) *employer* - those who had their own business and had employees; or
- (b) *self-employed* - have own business like repair shop, but no employees
- (c) *employed in public sector* - those working for public enterprises (governments, semi-governments)
- (d) *employed in private sector* - those working in private institutions and businesses
- (e) *unpaid employment* - those working for own households or family businesses or farms

Unemployed - All persons 12 years old and over who:

- (a) were neither *at work* nor *with a job but not at work* during the reference week, or who did subsistence activity only;
- (b) were looking for work to earn money during the last 4 weeks; and
- (c) were available to accept a job during the reference week.

Examples of job seeking activities were:

- (a) Registering at a public or private employment office
- (b) Meeting with prospective employers
- (c) Investigating possibilities for starting a professional practice or opening a business
- (d) Placing or answering advertisements
- (e) Writing letters of application
- (f) Being on a union or professional register

Also included as *unemployed* were persons 12 years old and over who did not work at a job or business during the reference week and were waiting to be called back to a job from which they had been laid off.

Not in the Labor Force - These consisted of all persons 12 years old and over who were not classified as members of the labor force. This category consisted mainly of students, retired workers, institutionalized persons, and persons who were severely disabled.

Subsistence Activity - A person was engaged in subsistence activities if he/she mainly produced goods for his/her own or family's use and needs, such as growing/gathering food, fishing, raising livestock, making handicrafts for home use, and other productive activities not primarily for commercial purposes. When subsistence activity categories are shown with the *Employed* and the *Not in Labor Force*, they related to activities engaged in during the census reference week. Persons who *did subsistence activity only* during the reference week were not classified as *employed*, unless they were with a job but not at work (see definition of *employed*).

Worker - The term appears in connection with several subjects, for example, place of work, class of worker, weeks worked in 2019, and workers in family in 2019. Its meaning varies and, therefore, should be determined in each case by referring to the definition of the subject in which it appears.

Actual Hours Worked Last Week - All persons who reported working at a job or business or farm during the reference week were asked to report in Section E. Item E4 the number of hours that they worked, excluding any time at subsistence activity. The statistics on hours worked for *employed, at work* persons pertain to the number of hours actually worked at all jobs, and do not necessarily reflect the number of hours typically or usually worked or the scheduled number of hours. The concept of *actual hours* differed from that of usual hours worked described below. The number of persons who worked only a small number of hours was probably understated since such persons sometimes considered themselves as *not working*. Respondents were asked to include overtime or extra hours worked, but to exclude lunch hours, sick leave, and vacation leave. The 2020 Census asked also for other activity beside the main activity for employment. In Section E item E6 it asks for other activity and the number of hours worked in this activity in E9.

Limitation of the Data - The census may have understated the number of employed persons because persons, students especially, who had irregular, casual, or unstructured jobs sometimes reported themselves as *not working*.

The reference week for the employment data was not the same for all persons. This lack of uniform reference week may mean that the employment data do not reflect the reality of the employment situation of any given week. (For more information, see the discussion under *Reference Week*.)

Comparability - The questionnaire items and employment status concepts for the 2020 census is comparable to some extent, with the 2015 census. The 2020 census Section E item E11 asked whether the persons was actively looking for a job, why not looking for a job or available for work last week. The industry codes used were ISIC codes which differed from the 2005 census. The 2005 census only asked if the person was an employee of 1. Private Sector 2. National Government 3. State Government 4. U.S./Other Government, 5. Self-employed and 6. Working without pay. The 2015 and 2020 censuses were more detailed in their description of where employed.

The 2015 and 2020 censuses also added a new item to capture other employment activity. This item was added to capture the part-time employment, legislative occupation, board membership, traditional chiefs, agriculture/fisheries, etc.

While data published was for persons 16 years and over, the 2020 census asked employment information for persons 12 years and over. For research purposes, data on persons below 16 years will be processed separately.

Since employment data from the census are obtained from respondents in households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. In establishments-based statistics, persons who worked for more than one establishment may be counted more than once. Moreover, other series, unlike those presented in the census, may exclude private household workers, unpaid family workers, and self-employed persons, but may include workers less than 16 years of age.

An additional difference in the data arises because persons who *had a job but were not at work* were included with the *employed* statistics shown in the census, whereas many of these persons are likely to be excluded from employment figures based on establishment payroll reports. Furthermore, the employment status data in the census included persons on the basis of usual place of residence regardless of where they worked, whereas establishment data report persons at their place of work regardless of where they live. This latter consideration is particularly significant when comparing data for workers who commute between areas.

Census data on hours worked during the reference week may differ from data from other sources. The census measured hours actually worked, whereas some surveys measure hours paid for by employers.

ETHNICITY

Data on ethnic origin or race were derived from answers to questionnaire Section C item C1, which was asked of all persons. The concept of ethnic origin as used reflected self-identification; it did not denote any clear-cut scientific definition of biological stock. The data for ethnicity represented self-classification by people according to the race with which they most closely identify. Furthermore, it was recognized that the categories of the race item included both racial and national origin or socio-cultural groups.

In general, *ethnic origin* or *race* refers to a person's origin or descent, *roots* or heritage. It may also refer to where the person or his/her parents were born. Thus, a person may have reported his/her ethnic origin based on the origin or race of parent, grandparent or more distant ancestors.

During direct interviews conducted by enumerators, if a person could not provide a single response to the ethnicity question, he/she was asked to select, based on self-identification, the group which best described his/her racial identity. If a person could not provide a single race response, the race of the mother was used. If a single race response could not be provided for the person's mother, the first race reported by the person was used. In all tabulations where households or families were classified by ethnic origin, the ethnic origin of the householder was used.

If the race entry for a member of a household was missing on the questionnaire, race was assigned based upon the reported entries of race by other household members using specific rules of precedence of household relationship. For example, if race was missing for the daughter of the householder, then the race of her mother (as female householder or female spouse) would be assigned. If no female householder or spouse was in the household, the daughter would be assigned her father's (male householder) race. If race was not reported for anyone in the household, the race of a householder in a previously processed household was assigned. This procedure was a variation of the general imputation procedures described in Appendix C, *Accuracy of Data*.

FERTILITY

Data on fertility (also referred to as *children ever born*) were derived from answers to questionnaire Section D items D1 to D10. Questions on the number of children ever born, number of children still alive, date of birth of last child, sex of last child, and date of death of last child were asked of all women 12 years and over, regardless of their marital status.

Data are most frequently presented in terms of the aggregate number of children ever born to women in the specific 5-year age groups and in terms of the rate per 1,000 women.

Children Ever Born - These included all live births the woman had *ever* had, including any babies who died (even shortly after birth). Ever-married women were instructed to include all children born to them during their previous and recent marriage/s and those born out of wedlock, children no longer living, children away from home, as well as children still living at home. Never married women were also instructed to report all children born to them. Excluded from the number of children *ever born* were foster children, stepchildren, adopted children, miscarriages and stillbirths (a birth at which a baby showed no sign of life).

One measure derived from this data is the *number of children ever born per 1000 women* in a particular age group. More important is the number of children ever born to a woman with ages 45-49 years as this would indicate the number of children a woman would have in her reproductive period.

Children Still Alive - These included the number of children the woman had *ever* had and were still alive at the time of the enumeration.

Comparability - The wording of the question on *children ever born* was the same in the 2020, 2015, 2005, 2000, 1995, 1990 and 1985 censuses. In the 1970 census tabulations, data presented on children ever born to all women assumed that single women were childless, even though it was known that some of them have had children. Therefore, rates and numbers of children ever born were not comparable between 1980 reports and previous census reports. Data presented for *children ever born* between 1980 and 2020 census reports are comparable as well as tables for all census years which show data for ever-married women.

The questions on the number of children still alive and the date of birth of last child were asked for the first time in the 1995 census, and continued in subsequent censuses.

GROUP QUARTERS

All persons not living in households were classified by the Office of Planning and Statistics as living in *group quarters*. Two general categories of persons in group quarters were recognized:

- (a) institutionalized persons and
- (b) other persons in group quarters (also referred as *non-institutional group quarters*).

Institutionalized Persons - These included persons under formally authorized, supervised care or custody in institutions at the time of enumeration. Such persons were classified as patients or inmates of an institution regardless of the availability of nursing or medical care, the length of stay, or the number of persons in the institution. Generally, institutionalized persons are restricted to the institutional buildings and grounds (or must have passes or escorts to leave) and thus have limited interaction with the surrounding community. Also, they are generally under the care of trained staff who have responsibility for their safekeeping and supervision.

Type of Institution - The type of institution was determined as part of census enumeration activities. Institutions included the following:

- (a) Correctional institutions which included prisons, Federal detention centers, military stockades or jails, local jails and other confinement facilities;
- (b) Nursing homes;
- (c) Mental hospitals;
- (d) Hospitals for chronically ill;
- (e) Schools, hospitals or wards for the mentally retarded;
- (f) Schools, hospitals or wards for the physically handicapped;
- (g) Hospitals and wards for drug/alcohol abuse;
- (h) Wards in General and Military Hospitals for patients who have *No Usual Home elsewhere*; and
- (i) Juvenile institutions.

Other Persons in Group Quarters (also referred to as *Non-institutional Group Quarters*) - These included all persons who lived in group quarters other than institutions. In the 2005 and previous censuses, persons who lived in the following living quarters were classified as *other persons in group quarters* when there were 10 or more unrelated persons living in the unit; in the 2015 and 2020 censuses, if a structure or room, is a part of a company or an individual employer, and the person living in it is not paying rent or electricity, it was classified as a group quarter:

- (a) Rooming houses; Group homes for the mentally ill, mentally retarded, physically handicapped, drug/alcohol abuse or other group homes; and
- (b) Religious Group Quarters.

Persons residing in certain other types of living arrangements were classified as living in non-institutional *group quarters* regardless of the number of people sharing the unit. These included persons residing in the following type of group quarters: college dormitories, military quarters, workers' dormitories, emergency shelters for homeless persons, crews of maritime vessels, and staff residents of institutions.

Comparability - For the 1990 and subsequent censuses, the definition of institutionalized persons was revised so that *care* included only persons under organized medical or formally authorized, supervised care or custody. As a result of this change in definition, maternity homes were classified as non-institutional rather than institutional group quarters as in previous censuses. The following types of other group quarters were classified as institutional: *half-way houses* (operated for correctional purposes) and *wards in general and military hospitals for patients who had no usual home elsewhere*, which included maternity, neonatal, pediatric, military, and surgical wards of hospitals, other-purpose wards of hospitals, and wards of infectious diseases. This definition was also adopted in the 2005 census. Because of the small number of persons involved, these changes should not significantly affect the comparability of data with earlier censuses.

In the 2005, 2000, 1995, 1990 and 1980 censuses, 10 or more unrelated persons living together were classified as living in non-institutional group quarters. In 2015 and 2020 censuses, this classification was changed, and defined as a group quarter even if 1 person is living in it and was not paying rent or utilities. Worker's dormitories were also classified as group quarters, regardless of the number of persons sharing the dorm. In 1970, the criteria for group quarters was six (6) or more unrelated persons.

HOUSEHOLD TYPE AND RELATIONSHIP

Household

A *household* constituted all persons who occupied a housing unit and prepared their food together. A household may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who shared living arrangements. The count of households or householders always equals the count of occupied housing units. (For more information, see the discussion under *Housing Units* and *Living Quarters*.)

Persons per Household - was obtained by dividing the number of persons in households by the number of households (or householders).

Median Persons per Household - In computing median persons per household, a whole number was used as the midpoint of an interval; thus, a household with 4 persons was treated as an interval ranging from 3.5 to 4.5 persons. The median was rounded to the nearest hundredth. The measure means that one-half of the total number of households have number of persons below the median size while the other half have number of persons above it. (For more information on medians, see discussion under *Derived Measures*.)

Family household

A *family* constituted a householder and one or more persons living in the same household who were related to the householder by birth, marriage or adoption. All persons in a household who were related to the householder comprised members of his/her family. A household can contain only one family for purposes of census tabulations. Not all households contained families since a household comprised a group of unrelated persons or one person living alone.

Families were classified by type according to the sex of the householder and the presence of relatives:

- (a) Married-couple family - was a family in which the householder and his/her spouse were enumerated as members of the same household;
- (b) Male Householder, No Wife Present; and
- (c) Female Householder, No Husband Present.

Persons per family - was obtained by dividing the number of (related) persons in families by the total number of families (or family householder).

Relationship to Householder

Data on relationship to householder were derived from built-in responses to questionnaire item 3, which was asked of all persons in the housing unit. The types of relationships for persons were as follows:

Householder/Head/Acting Head - One person in each household was designated as householder, usually he/she was the person in whose name the home was being owned, being bought or rented and who was listed as person number 1 in the census questionnaire. If the person in whose name the household is registered is too old or unable to make decisions or provide for the needs of the household, a decision is then made by the enumerator to select the person who makes most decisions and provides for the needs of the household as the householder. If there was no such person in the household, any adult household member 15 years old and over was designated as the householder.

The census classified the type of householder according to the sex of householder and the presence of relatives:

Family householder was a householder living with one or more persons related to him/her by blood, marriage or adoption. The householder and all persons in the household related to him/her were family members. Non-family householder was a householder living alone or with non-relatives only.

Spouse - was the person formally married to and living with the householder. This category also included persons who were consensually married and the spouse lived with the householder.

The number of spouses, however, was generally less than half of the number of *married persons with spouse present* since more than one married couple can live in a household, but only spouses of householders were specifically identified as *spouse*.

Unmarried Partner – was the person who lives regularly in the household as a partner but not married.

Child - included a son or daughter by birth, a stepchild, or adopted child of the householder, regardless of the child's age or marital status.

- (a) Natural son/daughter - was the child of the householder by birth, regardless of age or marital status.
- (b) Adopted son/daughter - was the child of the householder by legal adoption, regardless of age or marital status.
- (c) Stepson/stepdaughter - was the child of the householder through marriage but not by birth. This excluded sons-in-law, daughters-in-law and foster children. If the child was legally adopted by the householder, the child was still classified as stepson or stepdaughter.
- (d) *Own Child* - was a never married child under 18 years who was a son or daughter by birth, a stepchild, or adopted child of the householder. In certain tabulations, *own children* were further classified as living with two parents or with one parent only. *Own children* of the householder living with two parents were, by definition, found only in married-couple families.
- (e) *Related Children* - in a family included own children and all other persons under 18 years of age in the household, regardless of marital status, who were related to the householder, except the spouse of the householder. Foster children were not included since they were not related to the householder.

Other Relatives - In tabulations, these included any household member related to the householder by birth, marriage or adoption, but not included specifically in another relationship category. These included:

- (a) *Brother/sister* - referred to natural brother/sister, stepbrother/stepsister, and brother/sister by adoption of the householder. Brothers-in-law and sisters-in-law were included in the *other relative* category.
- (b) Nephew/Niece – referred to a nephew or niece, step-nephew or step-niece of the householder
- (c) *Father/mother* - referred to parents by birth, step-parents, and parents by adoption of the householder. Parents-in-law were classified as *other relative*.
- (d) *Grandchild* - referred to the grandson/granddaughter of the householder.
- (e) *Other relatives* - included other household members not listed in the above category who were related to the householder by blood, marriage, or adoption, e.g. aunt/uncle, grandparent, cousin, mother-in-law, daughter-in-law, etc.

Non-relatives - included the other household members and foster children who were not related to the householder by blood, marriage, or adoption, e.g. roomer, boarder, domestic helper, etc.

When relationship was not reported for an individual, it was imputed according to the responses for age, sex, and marital status for that person while maintaining consistency with responses for other individuals in the household. (For more information on imputation, see Appendix _, *Accuracy of Data*.)

Unrelated Individual

An unrelated individual was: a householder living alone or with non-relatives only; a household member who was not related to the householder, or a person living in group quarters who was not an inmate of an institution.

INCOME IN 2019

Data on the individual's income received during the calendar year 2019 were obtained from answers to questionnaire Section E, items E17 and E25. Questions on money income received were asked of all persons 12 years old and over.

Total income was the algebraic sum of the amounts reported separately for wage or salary income; net self-employment income from farm and non-farm business, proprietorship, or partnership; money received in customs payments; Social Security or retirement pensions; remittances; and other income. *Earnings* was defined as the sum of wage or salary income and net self-employment income from farm and non-farm business, proprietorship, or partnership. Earnings represented the amount of income received regularly before deductions for personal income taxes, Social Security, bond purchases, union dues, medicare deductions, etc.

Receipts from the following sources were not included as income: money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income in kind from food stamps, public housing subsidies, medical care, employer contributions for persons, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

Income Type in 2019

The main types of money income received in 2019 as reported in the 2020 census were defined as follows:

- (a) *Wage and Salary Income* - This was the total money earned by a person working as an employee for a private business or branch of government. This included wages, salary, piece-rate payments, commissions, tips, bonuses, Armed Forces pay, National Guard or Reserve pay, sick leave pay, and assistantships and teaching fellowships, prior to deductions for withholding tax, Social Security, union dues, bonds, uniforms, medicare deductions, pensions, etc.
- (b) *Self-Employment Income (net)* - This was the (gross receipts) money income received from farm and non-farm business, proprietorship or partnership less business or operating expenses. Gross receipts from non-farm business included all money received from goods sold and services rendered plus the value of any net inventory increase. Business expenses included the cost of merchandise purchased; expense for rent, heat, light and power used in business; annual depreciation of machinery and other business property; decrease in the value of inventory; wages and salaries paid to employees; expense allowances; business taxes; interest on business mortgages/debts; etc. Excluded as business expenses were money spent for purchase of buildings or machinery, or permanent improvements to existing property.

For farm business, gross receipts included money income received from the sale of farm products/produce. Operating expenses included the cost of feed, fertilizer, seeds, bulbs, plants, trees, sprays, insecticides, hardware, dairy supplies, tools, and livestock purchases; rental of machinery; cash wages for labor; cash rent paid; cash profits paid to the owner, interest on farm mortgages; building repairs; depreciation on farm equipment; farm taxes, etc.

- (c) *Social Security and Retirement Income* - *Social Security income* included payments made by the Federal, National and State Governments under retirement, survivors and disability insurance programs to retired persons, to dependents of deceased insured workers, or to disabled workers. Retirement incomes were payments from companies, unions, Federal, National, State or other local government agencies to former employees (including members of the Armed Forces) or their survivors in the form of private pensions, government employee pensions, disability pensions, and annuities from insurance.
- (d) *Alimony, Child Support, etc. Income* - This included unemployment compensation, child support or alimony, veterans' payments, periodic income received from private charitable organization, cash scholarships, fellowships and stipends received by students, interest, dividends, net rental income from real estate, net royalty income, and estates and trust funds.

Household Income - This included the income of the householder and all other persons 12 years old and over in the household, whether related to the householder or not.

Income of Persons - For persons 12 years old and over, the total amounts of their income were summed.

Mean Income - This was obtained by dividing the total income of a particular statistical universe by the number of units in the universe. Thus, *mean household income* was obtained by dividing total household income by the total number of households. For various types of income, the *means* were based on households having those particular type of income.

The 2020 census tabulations presented *mean income* or *earnings* for each type of income, also *mean income* for households.

Care should be exercised in using and interpreting mean income values for small sub-groups of the population as the mean is affected when extreme values are reported. It is especially susceptible to the effects of misreporting and processing errors. The median, which is not affected by extreme values, is a better measure than the mean when the population base is small. The mean, nevertheless, is shown in the tabulations even for small sub-groups because, when weighted according to the number of cases, the means are used to obtain summary measures for areas and groups other than those shown in census tabulations.

Per Capita Income - This was obtained by dividing the total income of a particular group by the total population in that group. Thus, *per capita income of persons in households* was derived by dividing the total income of households by the total population of persons in households.

Percent Year Round Full Time Worker - This was the proportion of the population 12 years old and over who usually worked 35 or more hours per week for 50 to 52 weeks in 2019.

Limitation of the Data - Since questionnaire entries for income reported by respondents were only estimates or based on memory, rather than on actual records, many persons tended to forget minor or irregular sources of income. This resulted to under-reporting of income and this became even more pronounced for income sources such as those from Social Security, customs payments, interest, etc. Over-reporting of income, on the other hand, resulted when income on self-employment was reported in gross rather than in net amounts. Another common error was the reporting of identical dollar amounts in two of the six types of income items where a respondent with only one source of income assumed that the second amount should be entered to represent total income. Such instances of over-reporting had an impact on the level of *mean farm or non-farm self-employment income* and *mean income* published for the various geographical subdivisions of the area.

Income data covered money income only, and did not include non-cash income received by residents. Despite the shift to wage and salary labor, non-cash income derived from subsistence activities, as well as those received as customs payments, was still very common among Palauan households and these amounted to a significant portion during the year, if included to their total income. These included goods produced on farms and consumed by the household, fishing, livestock raised and consumed by the household, making handicrafts for own use, and other productive activities which were not for commercial purposes. The fact that many farm families received an important part of their income in the form of *free* housing and goods produced and consumed on the farm should be taken into consideration when comparing the income of farm and non-farm residents. Non-money income such as business expense accounts, use of business transportation and facilities, or partial compensation by business for medical and educational expenses was also received by non-farm residents. In comparing income data for 2019 and earlier years, it should be noted that an increase or decrease in money income did not necessarily represent a comparable change in real income, unless adjustments for changes in prices were made.

In income tabulations for households and families, the lowest income group (e.g., *less than \$2,500*) included those that were classified as having no income in 2019. Many of these were living on income *in kind*, savings or gifts, were newly created families, or families in which the sole breadwinner had recently died or left the household. However, many of the households and families which reported *no income* probably had some money income which was not recorded in the census. Some may have been living on subsistence activity and, therefore, had received non-money income only.

Extensive computer editing procedures were instituted in the data processing operation to reduce some of the reporting errors and to improve the accuracy of the income data. These procedures improved the consistency of reported income items associated with work experience, occupation and class of worker. For example, if persons reported they were self-employed on their own farm or business, not incorporated, but had reported wage and salary earnings only, the latter amount was shifted to net self-employment income. Also, if any respondent reported total income only, the amount was generally assigned to one of the type of income items according to responses to work experience and class-of-worker questions. Another type of problem was the non-reporting of income data. Procedures were then devised to impute appropriate values with either no income or positive or negative dollar amounts for the missing entries.

Comparability - The income data collected in the 1980 and 1970 censuses were similar to the 2020, 2015, 2005, 2000, 1995 and 1990 censuses, but there were variations in the detail of the questions and the presentation of income types in the tabulations. The 2000 census included another type of income - *Customs Payments Received* - which in earlier censuses was classified in the *Other Income* category. In 2015, various income sources from subsistence were included for the first time.

(For more information on comparability of income data with earlier censuses, refer to *Appendix B* of the 2020 Census of Population and Housing publication - Republic of Palau.)

INDUSTRY and OCCUPATION

Data on industry, occupation and class of worker were derived from answers to questionnaire Section E items E1, E2 and E3, respectively. Data for these items referred to the employed person's during the census reference week. For persons who had more than one job, items

E6, E7 and E8 captured the secondary job. For unemployed persons, the data concerning work referred to the last or most recent job or business since 2019. (For more information, see discussion under *Reference Week*.)

Information or descriptions of industry and occupation provided by the respondents were converted to codes by the census editors based on the *Alphabetical Index of Industries and Occupations*.

Industry

Industry data were obtained from answers to Section E: item E3. There were rules to follow in reporting in order to correctly determine the kind of business or industry and facilitate office coding:

- (a) A person was to report the type of industry employed in. Industry codes were derived from the International Standard Industry Codes (ISIC), of which 17 are used.
- (b) The exact description of the kind of business or industry must have indicated the general and specific activity of a company, business or employer at the location where the person worked.
- (c) If a company had more than one kind of business or industrial activity carried on in the same place, only the major business or activity was to be reported at that location. For many activities in different locations, only the business or activity where the person actually worked was to be reported.

The industry classification system developed for the 1990 census, and subsequently used in 2000 and 2005, were modified for the 2015 and 2020 Censuses using the new ISIC, and classified into 17 major industry groups.

The ISIC was designed primarily to classify establishments by the type of industrial activity in which they were engaged. However, census data which were collected from households differ in detail and coverage from those obtained from establishment surveys. Therefore, the census classification systems, while defined in ISIC terms, cannot reflect in full details all categories. There are several levels of industrial classification found in census tabulations.

Occupation

Occupation described clearly and specifically the kind of work a person did. In some cases, it revealed what a person was called when he/she performed a particular kind of work.

The occupation of a person was ascertained by asking the question: *Type of Activity*, in Section E item E2. Answers to Section E, item E2 were derived from 13 Activity Codes which were split into 3 categories: **Paid Employment, Unpaid Employment and Not in the Labor Force**, which are located right on the questionnaire on the right side of the page.

Comparability - Comparability of industry and occupation data was affected by a number of factors, primarily the changes or revisions to the classification systems used. For both the industry and occupation classification systems, the basic structures were generally the same, but changes in the individual categories limited comparability of the data from one census to another. These changes were needed because of the *birth* of new industries and occupations, as well as the *death* of others, the growth and decline of existing industries and occupations, and the desire of analysts and users for more detailed presentation of data. Another cause of incomparability was the possible movement of a segment of a category to a different category in the next census. Changes in the nature of jobs and respondent terminology and the refinement of category composition made this movements necessary.

Comparability between statistics on industry and occupation from the 2015 and 2020 censuses, and earlier censuses, and those from other sources is affected by the factors described in the section *Employment Status*. Industry data from population censuses cover all industries and all types of workers, whereas, data from establishment surveys often excluded private household workers, government workers, and the self-employed.

Also, the responses provided by household respondents may have differed in detail and nature from those obtained from establishments.

LANGUAGE SPOKEN AT HOME

Data on language spoken at home were derived from the answers to questionnaire items Section C: Item C22, C23 and C24. These were intended to measure the extent to which languages other than Palauan were being spoken and how frequently they were spoken relative to Palauan. The questions were asked of all persons.

Language Spoken at Home - Persons were asked in questionnaire item C22 whether they currently spoke only Palauan at home.

Those persons who reported speaking a language other than Palauan were asked in question item C23 to report the language spoken at home. If more than one language was spoken, the person was asked which language was spoken most often in item C24. If it could not be determined which was spoken most often, the first language the person learned to speak was recorded. The response was recorded by the enumerator and later on coded using a detailed list of languages which distinguished more than 30 languages or language groups.

The imputation procedure for persons who failed to report language spoken at home involved attributing the language of other household members to a person with no entry. If that was not possible, the language of a person of similar ethnic origin and other demographic characteristics was imputed.

Comparability - In the 2000, 2005, 2015 and 2020 censuses, persons who reported in question item C22 that they spoke a language other than Palauan at home were asked to report in item C24 if this language was spoken more frequently than Palauan. Questionnaire items were different in the 1990 and 1995 censuses as the respondents were asked to report their proficiency in writing and speaking in any language, and whether a non-English language spoken at home was spoken more frequently than English.

Data on language spoken at home were tabulated for all persons. Since the responses to questionnaire item C23 were expected to be numerous, only the most common languages were presented in details in the tabulations. Languages having lesser usage were grouped into *Other language*, where appropriate.

LEGAL RESIDENCE

Data on the *legal residence* were obtained from responses to questionnaire item C20, which was asked of persons 18 years old and over. The *legal residence* was the place where the person had registered to vote. The legal residence of a person may be different from his usual residence. However, for Palauan citizens, the legal residence may either be in the same state in Palau as their usual residence, or it could be in a different state.

For persons registered in Palau, the hamlet in Koror or the state or island was reported. For persons registered in the U.S., the name of the State was also reported. Persons registered in a foreign country including U.S. territory or commonwealth reported only the name of the country.

Comparability - For the first time in the 2000 census, question on legal residence of a person was asked. The 2005, 2015 and 2020 question was the same as 2000. The census tabulations, however, limited the geographic presentation to the 16 states in Palau, USA/Guam/CNMI, FSM, Philippines, China/Taiwan and other countries.

MARITAL STATUS

The data on marital status were derived from answers to questionnaire item Section C: item C5. which was asked of all persons. The marital status classification referred to the status at the time of enumeration. Data for marital status, however, were tabulated for persons 15 years old and over only.

All persons were asked whether they were *never married*, *legally married*, *consensually married*, *widowed*, *separated or divorced*. Couples who lived together were allowed to report the marital status they considered the most appropriate.

Never Married - included all persons who had never been married, including persons whose only marriage(s) was annulled.

Legally Married, Except Separated - included persons whose current marriage had not ended through widowhood, divorce, or separation (regardless of previous marital history). The category also included couples who live together or person in common-law marriages, if they considered this category the most appropriate. In certain tabulations, currently married person were further classified as *spouse present* or *spouse absent*. In selected tabulations, data for married and separated persons were reorganized and combined with information on the presence of the spouse in the same household.

Consensually Married - included persons living in a marital union without a civil or religious matrimonial contract and were classified as *now married*. They were reported separately as *consensually married*. The category also included couples who lived together if they considered this category the appropriate.

Separated - included persons legally separated or otherwise absent from their spouses because of marital discord. Included were person who had been deserted or who had parted because they no longer wanted to live together but had not obtained a divorce.

Widowed - included widows and widowers who had not remarried.

Divorced - included persons who were legally divorced and who not remarried.

Now Married - included all persons whose current marriage has not ended by widowhood or divorce. This category included persons defined above as *separated*.

Comparability - The 2020 census marital status definitions were the same as those used in the 1990 through 2015 censuses, and these reflected the 1980 census with the exception of the term *never married* which replaced the 1980 term *single* in tabulations. A general marital status question has been asked in every Palau census since 1980.

PLACE OF BIRTH AND PARENTS' PLACE OF BIRTH

The data on place of birth were derived from answer to questionnaire Section C: item C4. Mother's place of birth and father's place of birth were derived from answers to questionnaire items C10-1 and C11-1, respectively. Each place of birth question asked for the name of state in Palau, the U.S. State, or the foreign country where the person or the person's parents were born according to current international boundaries. Since numerous changes in boundaries of foreign countries have occurred in the last century, some persons may have reported their place of birth or their parents' place of birth in terms of boundaries that existed at the time of the birth or emigration, or in accordance with their own national preference.

Comparability - Similar data were shown in tabulations for the 2020 census, as for the 1980, 1990, 1995, 2000, 2005 and 2015 censuses. However, nonresponse was not allocated. Instead, such persons were shown separately in the tables under *Elsewhere*.

Where tabulations are shown for households and families, the data referred to the *place of birth* of householders.

REASON FOR MIGRATION

Data on reason for migration were derived from questionnaire Section C: item C9, which was asked of persons born outside Palau. The question, *Why did this person come to Palau the first time?* was asked of persons who indicated in the question on citizenship (item C6) that they were not citizens of Palau. If the person gave more than one reason, the main reason was considered. The possible reasons were as follows:

- (a) Employment - if a person came to Palau for the first time primarily for employment, even if he/she had other reasons for coming;
- (b) Spouse of employed person - if a person came to Palau for the first time primarily because he/she was a spouse of a person who came either for employment or was already employed in Palau;
- (d) Dependent of employed person - if a person came to Palau for the first time primarily because he/she was the dependent (but not the spouse) of a person who came either for employment or was already employed in Palau;
- (e) Family member of employed person - if a person came to Palau for the first time primarily because he/she was a family member (other than a spouse or a direct dependent) of a person who was either employed or who came for employment in Palau;
- (f) Student - if a person came to Palau for the first time primarily to be a student at either an elementary, high school or college;
- (g) Missionary - if a person came primarily for missionary activities;
- (h) Medical reasons - if a person came to Palau for the first time primarily for medical reasons even if he/she had other reasons for coming;
- (i) Visiting or vacation - if a person came to Palau for the first time primarily to visit or for vacation, even if the person eventually stayed or had other reasons for coming;
- (j) Others - if the person had some other reasons for coming to Palau for the first time other than those listed above, he/she was asked to state the specific reason.

Comparability - The question on reason for migration to Palau was asked for the first time in the 1995 census, and continued in subsequent censuses..

REFERENCE WEEK

The data on labor force status was related to the reference week; that is, the calendar week preceding the data on which the respondents were interviewed by enumerators. This week was not the same for all respondents since the enumeration was not completed in one week. The occurrence of holidays during the enumeration period could affect the data on actual hours worked during the reference week, but probably had no effect on overall measurement of employment status.

Comparability - The reference weeks for the 2020 census included that time between the first week of April 2020 and the end of the month during which time enumerators worked in the field.

The differing occurrence of the various holidays could affect the comparability of the 2020 census data and those from previous censuses on *actual hours worked* for some areas if the respective weeks containing holidays were the reference weeks for a significant number of persons. The holidays probably did not affect the overall measurement of employment status since this information was based on work activity during the entire reference week.

RELIGION

Data on religion were derived from answers to questionnaire item C2, which was asked of all persons.

This item had an open-ended question and the responses were recorded by the enumerators. These responses were later on coded using a list of more than 8 identified religions. Persons who said they had no religion were classified into the *Other* category.

Comparability - The question on religion was asked for the first time in the 2000 census, and data were shown for all persons, regardless of age. The question was continued in 2020.

RESIDENCE IN 2015

In the 2020 census, data on residence in 2015 were derived from answers to questionnaire items C21-1 and C21-2, which were asked of persons born before 2015. For persons who reported in item C21-1 that they lived in a different house on April 2015, other than their current residence on the date of enumeration, question item C21-2 asked for hamlet or State in Palau, U.S. state or territory or foreign country where those persons were living on that date. Residence in 2015 was used in conjunction with location of current residence to determine the extent of residential mobility of the population and the resulting redistribution of the population among the states and between the states and the U.S. states and other foreign countries.

When no information on residence in 2015 was reported for a person, information for other family members, if available, was used to assign a location of residence in 2015. All cases of non-response or incomplete response that were not assigned a previous residence based on information from other family members were allocated the previous residence of another person with similar characteristics who provided complete information.

The tabulation category *Yes* included all persons 5 years old and over who did not move during the 5 years, as well as those who had moved but by 2020 had returned to their 2015 residence. The category *No in Palau* included persons who lived in Palau in 2015 but in a different house or apartment from the one they occupied on April 13, 2015. These movers were then further subdivided according to the type of move.

In most tabulations, persons who moved within Palau were divided into those moving within the same state and those moving from a different state. Movers from outside Palau were divided into groups according to their 2015 residence: Guam, CNMI, U.S., FSM, Asia and Others. The Asia group were further subdivided into 4 countries.

Comparability - The 2020 census question reported data similar to that in the 1990, 1995, 2000, 2005 and 2015 censuses. Similar questions were also asked in previous censuses, but previous residence was not allocated for nonresponse in 1980.

SCHOOL ENROLLMENT AND LABOR FORCE STATUS

Tabulation of data on enrollment, educational attainment, and labor force status for the population in 5-year age groups allowed for the calculation of the proportion of the age group who were not enrolled in school and not high school graduates, or *dropouts*. Definitions of the three topics and descriptions of the census items from which they were derived were presented in *Educational Attainment, Employment Status and School Enrollment and Type of School*. The published tabulations included both the civilian and Armed Forces populations.

Comparability - The tabulation of school enrollment by labor force status in the 2020 census was similar to that published in previous census reports.

SCHOOL ENROLLMENT AND TYPE OF SCHOOL

Data on school enrollment were derived from answers to questionnaire item C12, which was asked of all persons. Persons were classified as enrolled in school if they reported attending a *regular* public or private school or college at any time between August 2019 and April 2020 and the time of enumeration. The question included instructions to *include only nursery school, kindergarten, elementary school, and schooling which would lead to a high school diploma or a college degree* as regular school.

Enumerators were instructed that enrollment in a trade or business school, company training, or tutoring were not to be included unless the course would be accepted for credit at a regular elementary school, high school, or college. Persons who did not answer the enrollment question were considered as not enrolled.

Public and Private School - Persons who attended school in the reference period indicated whether they were enrolled in either *public school* or *private school*. A *public* school was defined as any school or college controlled and supported by the state, national or Federal Government. Schools supported and controlled primarily by religious organizations or other private groups were defined as *private*.

Level of School in Which Enrolled - Persons who were enrolled in school were classified as enrolled in *nursery, kindergarten, elementary, high school or college* according to their response to question item C13 (years of school completed or highest degree received). Persons who were enrolled and reported completing nursery school or less were classified as enrolled in *preprimary school*, which included kindergarten. Similarly, enrolled persons who had completed at least kindergarten, but not high school, were classified as enrolled in *elementary or high school*. Enrolled persons who reported completing high school or some college or having received a post-secondary degree were classified as enrolled in *college*. Enrolled persons who reported completing the twelfth grade but receiving No Diploma were classified as enrolled in *high school*. (For more information on level of school, see discussion on *Educational Attainment*.)

Comparability - The 2000, 2005, 2015 and 2020 census questions on school enrollment and highest level of school completed mirrored that of the 1990 and 1995 censuses. In past years, instructions on the types of schools to include have changed.

The age range for which enrollment data have been obtained and published has varied over the censuses.

Type of school was first introduced in the 1970 census. The type of school was incorporated into the *yes* response categories for the enrollment question. The types identified were *public, parochial* and *other private*. In the 1980 census, *private, church related* and *private, not church related* replaced *parochial* and other private. Grade of enrollment was first available in the 1950 census, where it was obtained from responses to the question on highest grade of school completed. Enumerators were instructed that *for a person still in school, the last grade completed will be the grade preceding the one in which he/she was now enrolled*. From 1960 to 1980, grade of enrollment was obtained from the highest grade attended in the two-part question used to measure educational attainment. The form of the question from which level of enrollment was derived in the 1990 census most closely corresponds to the question used in 1950. Data from prior censuses can be aggregated to provide levels of enrollment comparable to the 2020, 2015, 2005, 2000, 1995 and 1990 censuses.

Data on school enrollment were also collected and published by local government agencies. Where these data were obtained from administrative records of school systems and institutions of higher learning, they were only roughly comparable with data from population censuses and household surveys because of differences in definitions and concepts, subject matter covered, time references and enumeration methods. At the state level, the difference between the location of the institution and the residence of the student may affect the comparability of census and administrative data. Differences between the boundaries of school districts and census geographic units also may affect these comparisons.

SEX

The data on sex were derived from answers to questionnaire item R2, which was asked of all persons. For most cases in which sex was not reported, it was determined by the appropriate entry from the person's given name and household relationship. Otherwise, sex was imputed according to the relationship to the householder and the age and marital status of the person.

Sex Ratio - A measure derived by dividing the total number of males by the total number of females and multiplying by 100.

Comparability - A question on the sex of individuals, similar to that asked in the 2020 census has been asked of the total population in every census.

SUBSISTENCE ACTIVITIES

The data on subsistence activities were derived from answers to questionnaire Section E: items E1 to E3, which were asked of all persons 12 years and over, even though the publication only accounts for persons 16 years and over, who had worked in 2019. If a subsistence activity was not reported, it was assumed that the person did not do subsistence of that type, so "No" was imputed. The value of the subsistence in the year before the census was obtained in questionnaire items E19-1 to E22-2 .

Comparability – Subsistence activity was asked for the first time in the 2005 census, and the 2015 and 2020 data are comparable to the 2005 census.

USUAL RESIDENCE

Data on *usual residence* were derived from entries in questionnaire item R1, which were completed by the census enumerators. *Usual residence* was the place where a person lived and slept most of the time. In the 2005, 2015 and 2020 censuses, the following rules applied to the enumeration of persons in their *usual residence*:

- (a) Family members, housemates, roommates, foster children, boarders, roomers and live-in employees were counted in their usual residence; that is, the place where they lived and slept most of the time;
- (b) Persons temporarily away on a business trip or vacation, in general hospital or for customs/ traditional purposes were counted in their usual residence;
- (c) High school and college students were counted in the place where they lived while attending school;
- (d) Newborn babies still in the hospital were counted in the usual residence of their parent/s;
- (e) Persons were counted in the place where they stayed most of the week while working even if they had a home elsewhere; and
- (f) Persons who had no usual residence were counted on the place where they were staying on census day.
- (g) Excluded from the count of persons in the usual residence were the following:
 - (1) Persons who usually lived somewhere else;
 - (2) Persons who were away in an institution, such as prison, mental hospital, or nursing home;
 - (3) College students who lived somewhere else while attending school;
 - (4) Persons in the Armed Forces who lived somewhere else; and
 - (5) Persons who stayed somewhere else most of the time while working.
 - (6) Children below college level but away in boarding schools

Comparability - In every census, data on *usual residence* of persons are made available in specified geographic disaggregations. The 2020 census tabulations on *usual residence* presented data on the state level and by hamlet for the state of Koror. Where tabulations were shown for households and families, the data referred to the *usual residence* of the householders.

WORK STATUS IN 2019

Data on work status in 2019 were derived from answers to questionnaire Section E: item E1 to E3, which were asked of persons 12 years old and over. Census tabulations, however, showed data for Work Status in 2019 for persons 16 years old and over. Persons 16 years old and over who worked one or more weeks according to the criteria described below were classified as *Worked in 2019*. All other persons 16 years old and over were classified as *Did not work in 2019*.

Weeks Worked in 2019 - Data on *Weeks Worked in 2019* were derived from responses to questionnaire item E15, which was asked of persons who indicated in question item E14 that they worked in 2019.

The data pertain to the number of weeks in 2019 during which a person did any work for pay or profit (including paid vacation and paid sick leave) or worked without pay on a family farm or in a family business.

Usual Hours Worked per Week Worked in 2019 - The data on usual hours worked per week worked in 2019 were derived from answers to questionnaire item E16. This question was asked of persons who indicated that they worked in 2019.

The data pertain to the number of hours a person usually worked during the weeks worked in 2019. The respondent was to report the number of hours worked per week in the majority of the weeks he/she worked in 2019. If the hours worked per week varied considerably during 2019, the respondent was to report an approximate average of the hours worked per week. Persons 16 years old and over who reported that they usually worked 35 or more hours each week during the weeks they worked were classified as *Usually worked full time*; persons who reported that they usually worked 1 to 34 hours were classified as *Usually worked part time*.

Year-Round Full-Time Workers - All persons 16 years old and over who usually worked 35 hours or more per week for 50 to 52 weeks in 2019.

Limitation of the Data - It was probable that the number of persons who worked in 2019 and the number of weeks worked were understated since some respondents tended to forget intermittent or short periods of employment or to exclude weeks worked without pay. They may also be a tendency for persons to exclude weeks of paid vacation among their weeks worked; one result may be that the census figures may understate the number of persons who worked *50 to 52 weeks*.

Comparability - Data on weeks worked collected in the 2020 census were comparable with data from the 2015, 2005, 2000, 1995, 1990, 1980, 1970, and 1960 censuses. In the 2005, 2000, 1995, 1990 and 1980 censuses, persons were asked to report the specific number of weeks they worked.

YEAR OF ENTRY

Data on year of entry were derived from answers to questionnaire item C8, which was asked of persons who were born outside Palau. The question, *In what month and year did this person come to Palau to stay?*, was asked of persons who indicated on the question on citizenship (item C6) that they were not born in Palau. For persons who have entered Palau more than once, the latest month and year they came to stay was considered as the date of entry. (For more information, see the discussion on *Citizenship*.)

The 2015 and 2020 census questions, tabulations and census data products about citizenship and year of entry included no reference to immigration. All persons who were born and resided outside Palau before becoming residents of Palau had a *date of entry*. To avoid any possible confusion concerning the date of entry, the term *year of entry* was used in this report instead of the term *year of immigration*.

Limitation of the Data - The census questions on nativity, citizenship, and year of entry were not designed to measure the degree of permanence of residence in Palau. The phrase *to stay* was used to obtain the year in which the person became a resident of Palau. Although the respondent was directed to indicate the year he/she entered the country *to stay*, it was difficult to ensure that respondents interpreted the phrase correctly.

Comparability - A question on *year of entry* was asked in the 1990 and 1995 censuses. In the 2000, 2005, 2015 and 2020 censuses, persons reported the month and year of entry into Palau.

HOUSING CHARACTERISTICS

Housing Units - A housing unit was a house, an apartment, a mobile home or trailer, a group of rooms or a single room occupied as separate living quarters, or if vacant, intended for occupancy as separate living quarters. Separate living quarters were those in which the occupants live and eat separately from any other persons in the building and which had direct access from outside the building or through a common hall.

The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who shared living arrangements. For vacant units, the criteria of separateness and direct access were applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria were applied to the previous occupants.

Both occupied and vacant housing units were included in the housing unit inventory, except that recreational vehicles, boats, vans, tents and the like were included only if they were occupied as someone's usual place of residence. Vacant mobile homes were included provided they were intended for occupancy on the site where they stand. Vacant mobile homes on dealers' sales lots or in storage yards were excluded from the housing inventory.

If the living quarters contained persons whose employers paid the rent and/or utilities, they were classified as *group quarters*.

Occupied Housing Units - A housing unit was classified as *occupied* if it was the usual place of residence of the person or group of persons living in it at the time of enumeration, or if the occupants were only temporarily absent; that is, away on vacation or business. If all the persons staying in the unit at the time of the census had their usual place of residence elsewhere, the unit was classified as *vacant*. A household included all the persons who occupy a housing unit as their usual place of residence. By definition, the count of occupied housing units for the tabulations was the same as the count of households or householders.

Vacant Housing Units - A housing unit was vacant if no one was living in it at the time of enumeration, unless its occupants were only temporarily absent. Units temporarily occupied at the time of enumeration entirely by persons who had a usual residence elsewhere were also classified as vacant. (For more information, see discussion under *Usual Home Elsewhere*.)

New units not yet occupied were classified as vacant housing units if construction had reached a point where all exterior windows and doors were installed and final usable floors were in place. Vacant units were excluded if they were open to the elements; that is, the roof, walls, windows, and/or doors no longer protected the interior from the elements, or if positive evidence existed (such as a sign on the house or in the block) that the unit was condemned or was to be demolished. Also excluded were quarters being used entirely for non-residential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory, machinery, or agricultural products.

Hotels, Motels, Rooming Houses, etc. - Occupied rooms or suites of rooms in hotels, motels, and similar places were classified as housing units only when occupied by permanent residents; that is, persons who considered the hotel as their usual place of residence or had no usual place of residence elsewhere. Vacant rooms or suites of rooms were classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations were occupied by permanent residents.

If any of the occupants in a rooming or boarding house lived and ate separately from others in the building and had direct access from outside, their quarters were classified as separate housing units.

Staff Living Quarters - The living quarters occupied by staff personnel within any group quarters were separate housing units if they satisfied the housing unit criteria of separateness and direct access; otherwise, they were considered *group quarters*.

Comparability - The first Census of Housing in 1940 established the *dwelling unit* concept. Although the term became *housing unit* and the definition has been modified slightly in succeeding censuses; the 2020 census definition for housing unit was the same as that used for the 2015, 2005, 2000, 1995, 1990 and 1980 censuses.

AIR CONDITIONING

Data on air conditioning were obtained from questionnaire Section A, item A21, which was asked for occupied housing units. Air conditioning was defined as the cooling of air by a refrigeration unit. It did not include evaporative coolers, fans, or blowers, which were not connected to a refrigeration unit; however, it did include heat pumps. A central system was an installation which air conditioned a number of rooms. In an apartment building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central system with individual room controls was a *central air conditioning system*. A *room unit* was an individual air conditioner which was installed in a window or an outside wall and was generally intended to cool one room, although it may sometimes be used to cool more than one room.

Comparability - Data on air conditioning were collected for the first time in 1980 and were shown only for year-round housing units. In the 1990 census, data were shown for all housing units while the 2005, 2015 and 2020 census tabulations presented data for occupied housing units only.

BATHTUB OR SHOWER

Data on Bathtub or shower were obtained from questionnaire item A16, which was asked for occupied housing units.

Answers to the question, *Do you have a bathtub or shower?*, provided data on the number of housing units with bathtub or shower

- (1) inside the unit,
- (2) inside the building,
- (3) outside the building, or;
- (4) with no bathtub or shower.

Comparability - Data on bathtub or shower were collected for the first time in 1970. In 1980 and consequent censuses, the data were shown separately as well as combined with data on water supply and flush toilet to identify the presence of complete plumbing facilities.

BEDROOMS

Data on bedrooms were obtained from questionnaire item A13, which was asked for occupied housing units. The number of bedrooms was the count of rooms designed to be used as bedrooms; that is, the number of rooms that would be listed as bedrooms if the house or apartment were on the market for sale or for rent. Included were all rooms intended to be used as bedrooms even if they currently were being used for some other purpose. A housing unit consisting of only one room, such as a one-room efficiency apartment was classified, by definition, as having no bedroom. The 1995, 2000, 2005, 2015 and 2020 census tabulations presented data on the number of bedrooms for owner-occupied and renter-occupied housing units.

Comparability - Data on bedrooms have been collected in every census since 1960. In 1970 and 1980, data for bedrooms were shown only for year-round units. In past censuses, a room was defined as a bedroom if it was used mainly for sleeping even if also used for other purposes. Rooms that were designed to be used as bedrooms but used mainly for other purposes were not considered to be bedrooms. A distribution of housing units by number of bedrooms calculated from data collected in a 1986 U.S. test showed virtually no differences in the two versions except in the two-bedroom category, where the previous *use* definition showed a slightly lower proportion of units. In the 2000, 2005, 2015 and 2020 censuses, respondents were asked to provide a number for the count of bedrooms in the housing unit, whereas the 1990 census offered a range of 5 choices from *no bedroom* to *5 or more bedrooms*.

BOARDED-UP STATUS

Data on boarded-up status were obtained from questionnaire item AV-2 for all vacant housing units. Boarded-up units had windows and doors covered by wood, metal, or similar materials to protect the interior and to prevent entry into the building. A single-unit structure, a unit in a multi-unit structure, or an entire multi-unit structure may be boarded-up in this way. For certain census products, boarded-up units were shown only for units in the *Other vacant* category.

Comparability - Data on boarded-up status were collected for the first time in 1980 and was shown only for year-round vacant housing units.

BUSINESS ON PROPERTY

Data on business on property were obtained from questionnaire item A6, which was asked for all occupied dwellings.

A business had to be easily recognizable from the outside. It will usually have a separate outside entrance and have the appearance of a business, such as grocery store, restaurant, or shop. It may either be attached to the house or mobile home or be located elsewhere on the property. Those housing units in which a room was used for business or professional purposes and have no recognizable alterations to the outside were not considered as having a business. Medical offices were considered businesses for tabulation purposes.

The 2005 census tabulations presented data on *business on property* for owner-occupied and renter-occupied one-family houses only.

Comparability - Data on business on property have been collected for Palau since the 1940 census.

CELL PHONE IN HOUSING UNIT

Data on cell phones were obtained from questionnaire item A19, which was asked for occupied housing units. Units where the respondent uses a cell phone not located in the respondent's living quarters were classified as having *no cell phone*.

Comparability - The cell phone census question was asked for the first time in 2005 and continued in the 2015 and 2020 censuses.

COMPUTER (PERSONAL) IN HOUSING UNIT

Data on personal computers were obtained from questionnaire item A19b, which was asked for occupied housing units. A personal computer had to be inside the house or apartment for the unit to be classified as having a personal computer. Units where the respondent uses a computer located outside the respondent's living quarters were classified as having *no computer*.

Comparability - The personal computer census question was asked for the first time in 2005 and continued in the 2015 and 2020 censuses.

COOKING FACILITIES

Data on cooking facilities were obtained from questionnaire item A26, which was asked for all occupied housing units. *Main cooking facilities* were the ones that were used most often for preparation of meals. They can be located inside or outside the building. *No cooking facilities* included those units with no cooking facilities available either inside or outside the building. The census tabulations presented data on cooking facilities for occupied housing units only.

Comparability - Data on cooking facilities were collected for the first time in 1970. In 1980, data for cooking facilities were shown for year-round and occupied housing units. In 1990, 1995, 2000 and 2005 censuses, data were shown for all housing units, while the 2015 and 2020 census asked only for occupied housing units.

COOKING FUEL

Data on cooking fuel were obtained from questionnaire item A27, which was asked for all occupied housing units.

Electricity - included electric stove, microwave, electric rice cookers, etc.

Gas: bottled or tank - included liquid propane gas stored in bottles or tanks which were refilled or exchanged when empty.

Kerosene – kerosene stove only.

Biomass - included purchased wood or charcoal, wood cut by household members on their property or elsewhere, driftwood, sawmill or construction scraps, or the like.

Other Fuel - included all other fuels not specified elsewhere.

No Fuel Used - included units that did not use any fuel or that did not have kitchen facilities.

Comparability - Data on cooking fuel were collected for the first time in 1980.

DURATION OF VACANCY

Data for duration of vacancy (also referred to as *months vacant*) were obtained from questionnaire item AV-3, which was completed by census enumerators. The statistics on duration of vacancy referred to the length of time (in months) between the date the last occupants moved from the unit and the time of enumeration. The data, therefore, do not provide a direct measure of the total length of time units remained vacant.

For newly constructed units which had never been occupied, the duration of vacancy was counted from the date construction was completed. For recently converted or merged units, the time was reported from the date conversion or merger was completed. Units occupied by an entire household with a usual home elsewhere were assigned to the *less than 1 month* interval.

Comparability - Similar data were collected in 1980. These data were shown in 1980 only for year-round housing units. In the 1990 census, these data were shown for vacant-for-sale and vacant-for-rent housing units. The 2000 and 2005 census showed data only for vacant-for-rent-housing units. The 2015 and 2020 censuses shows data for vacant-for-rent, for-sale, rented or sold not occupied, for seasonal/recreational or occasional, for migrant workers and other vacants.

KITCHEN FACILITIES

Data on kitchen facilities were obtained from questionnaire items A26, A27 and A28, which were asked for occupied housing units. The 2000 and 2005 census questions were similar with the 1995 and 1990 censuses in that the kitchen facilities or stove and refrigerator were asked in two separate questions. A unit had *complete kitchen facilities* when it had all of the following:

- (a) an installed sink with piped water,
- (b) a range, cook top and convection or microwave oven, or cook stove, and
- (c) a refrigerator. All kitchen facilities had to be located in the structure. They need not be in the same room. Portable cooking equipment was not considered a range or cook stove. An ice box was not considered to be a refrigerator.

The 2015 and 2020 censuses asked separately for: A26-Main cooking facilities; A27-Fuel used most and; A28-Sink with piped water.

Comparability - The 2000 and 2005 censuses followed censuses before 1990 which collected data on individual components, such as kitchen sink and type of refrigeration equipment.

MORTGAGE STATUS

Data on mortgage status were obtained from questionnaire item A3, which was asked for owner-occupied housing units, condominiums, boats, and mobile homes. *Mortgage* referred to all forms of debt where the property was pledged as security for repayment of the debt. It included such debt instruments as deeds of trust, trust deeds, contracts to purchase, land contracts, junior mortgages and home equity loans.

A mortgage was considered a first mortgage if it had prior claim over any other mortgage or if it was the only mortgage on property. All other mortgages were considered junior mortgages. A home equity loan was generally a junior mortgage. If no first mortgage was reported, but a junior mortgage or home equity loan was reported, then the loan was considered a first mortgage. In most census tabulations, data for *Selected Monthly Owner Costs* and *Selected Monthly Owner Costs as Percentage of Household Income in 2019* were usually shown separately for units *with a mortgage* and for units *not mortgaged*. The category *not mortgaged* comprised of housing units owned free and clear of debt.

Comparability - The item was asked for the first time in 1980. In 1980, the mortgage status questions were asked at owner-occupied one-family houses on less than 3 acres. Excluded were mobile homes, boats, condominiums, houses with a business or medical office, houses on 3 or more acres, and housing units in multi-unit buildings. In 2020, 2015, 2005, 2000, 1995, and 1990, the questions were asked for all owner-occupied housing units. They were also asked at mobile homes, boats and houses with a business or medical office.

OTHER HOUSING EQUIPMENT

Data on battery-operated radio and television set were obtained from questionnaire items A19b and A20, respectively, which were asked for all occupied housing units. Statistics on radio and television sets were in terms of the number of housing units having these particular items.

Included as *battery-operated radios* were car radios, transistors, and other battery-operated sets in working order or needing only a new battery for operation. Included as *television sets* were floor, table, built-in or portable models, or combinations with radios or record players, whether black and white or color, which were in working order or being repaired.

ENERGY EFFICIENCY AND RENEWABLE ENERGY

Data on energy-efficient appliances were asked for the first time in the 2015 and 2020 censuses. Item A9b, A10b, A15, A18b, A19b and A21b captures information needed for planning in terms of climate change, renewable energy and other related projects.

Comparability - Data on radio and television sets were collected for the first time in 1980. In 1980, data on radio sets included all types of radio sets, either electric or battery operated. In 1990, 1995, 2000, 2005 and 2020 however, only battery-operated radios were considered. Since 1980, there had been no change in the definition for television sets.

PERSONS IN UNIT

This item was based on the count of persons in occupied housing units in questionnaire item R1. All persons occupying the housing unit were counted including the householder, occupants, related to the householder, and lodgers, roomers, boarders and so forth.

Data on persons in unit show the number of housing units occupied by the specified number of persons. The phrase *persons in unit* was used for housing tabulations; *persons in households* for population items. Figures for *persons in unit* determined those for *persons in household*.

Median Persons in Unit - In computing median persons in unit, a whole number was used as the mid-point of an interval; thus, a unit with 4 persons was treated as an interval ranging from 3.5 to 4.5 persons. Median persons was rounded to the nearest hundredth. (For information on medians, see the discussion under *Derived Measures*.)

Persons in Occupied Housing Units - This was the total population minus those living in quarters. *Persons per occupied housing unit* was computed by dividing the population living in housing units by the number of occupied housing units.

PERSONS PER ROOM

Persons per room was obtained by dividing the number of persons in each occupied housing unit by the number of rooms in the unit. Persons per room was rounded to the nearest hundredth. The figures shown referred, therefore, to the number of occupied housing units having the specified ratio of persons per room.

Mean Persons per Room - This was computed by dividing the number of persons in housing units by the aggregate number of rooms, and was intended to provide a measure of use. A higher mean may indicate a greater degree of use or overcrowding; a low mean may indicate underuse. (For more information on means, see the discussion under *Derived Measures*.)

PLUMBING FACILITIES

The 2020 census data on plumbing facilities were obtained from question items A14, A16 and A17. All three questions provided data on the presence of hot and cold piped water, bathtub or shower, and flush toilet, respectively.

The 2020 census questions were comparable to those asked in the 1990, 1995, 2000 and 2015 censuses as these were used in classifying whether a housing unit had complete plumbing facilities or the lack of it. *Complete plumbing facilities* included hot and cold piped water, a flush toilet, and a bathtub or shower. All three facilities had to be located inside the house, apartment or mobile home, but not necessarily in the same room. Housing units were classified as *lacking complete plumbing facilities* when any of the three facilities were not present.

Comparability - The 2020 census collected data on plumbing facilities in separate parts instead of complete plumbing, but after reconfiguring, comparability with the previous censuses was still possible. The 2005 and later data on complete plumbing facilities also were not strictly comparable with the 1980 data. In 1980, complete plumbing facilities were also not strictly comparable with the 1980 data. In 1980, complete plumbing facilities were defined as hot and cold piped water, a bathtub or shower, and a flush toilet in the housing unit for the exclusive use of the residents of that unit. In 1990, the Census Bureau dropped the requirement of exclusive use from the definition of complete plumbing facilities. From 1940 to 1970, separate and more detailed questions were asked on piped water, bathing, and toilet facilities. In 1970 and 1980, the data on plumbing facilities were shown only for year-round housing units.

ROOMS

Data on rooms were obtained from questionnaire item A12, which was asked for occupied housing units. The statistics on rooms were in terms of the number of housing units with a specified number of rooms. The intent of this question was to count the number of whole rooms used for living purposes.

For each unit, rooms included living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use, and lodger's rooms. Excluded were strip or pullman kitchens, bathrooms, open porches, balconies, halls or foyers, half-rooms, utility rooms, unfinished attics or basements, or other unfinished space used for storage.

A partially divided room was a separate room only if a partition ran from floor to ceiling, but not if the partitioned consisted solely of shelves or cabinets.

Median Rooms - This measure divides the room distribution into two equal parts, one-half of the cases falling below the median number of rooms and one-half above the median. In computing median rooms, the whole number was used as the midpoint of the interval; thus, the category *3 rooms* was treated as an interval ranging from 2.5 to 3.5 rooms. Median rooms was rounded to the nearest hundredth. (for more information on medians, see the discussion under *Derived Measures*.)

Aggregate Rooms - To calculate aggregate rooms, the actual number of rooms reported for housing units were aggregated.

Comparability - Data on rooms have been collected since 1940. In 1970 and 1980, these data were shown only for year-round housing units. In the 1990 and subsequent censuses, these data were shown for all housing units, and separately for owner-occupied and renter-occupied housing units. The 2005 census tabulations showed data for all housing units and separately for owner-occupied housing units only. The 2015 and 2020 censuses tabulations showed data for occupied housing units only.

SELECTED MONTHLY OWNERS COSTS

Data on *Selected Monthly Owner Costs* were obtained from questionnaire items A31 through A34 for all occupied housing units. Selected monthly owner costs was the sum of payments for utilities (electricity, gas and water) and fuels (oil, coal, kerosene, wood, etc.)

In the 2015 and 2020 censuses tabulations, selected monthly owner costs were presented only for specified-owner occupied housing units. Data usually were shown separately for units *with a mortgage* and for units *not mortgaged*.

Median Selected Monthly Owner Costs - This measure was rounded to the nearest whole dollar.

Comparability - The components of selected monthly owner costs were collected for the first time in 1980. The 2000, 2005, 2015 and 2020 censuses questions from which tabulations of selected monthly owner costs for specified owner-occupied housing units came differed from the 1990 and 1980 censuses as the costs for payments of mortgages; deeds of trust; contracts to purchase or other similar debts; real estate taxes; fire, hazard and insurance on property were not collected in the 2000 census. In the 1980, 1990, 1995, and 2000 censuses, costs for electricity and gas were collected as average monthly costs.

SEWAGE DISPOSAL

Data on sewage disposal were obtained from questionnaire item A25. Housing units were either connected to a public sewer, to a septic tank or cesspool, or disposal of sewage was by other means. A public sewer is operated by a government body. A housing unit was considered to be connected to a septic tank or cesspool when the unit was provided with an underground pit or tank for sewage disposal. The category *Other means* included housing units which disposed of sewage in some other way.

Comparability - Data on sewage disposal have been collected since 1940. In 1970 and 1980, data were shown only for year-round housing units. In the 2000 and consequent censuses, data were shown for occupied housing units while the 1990 and 1995 censuses showed data for all housing units.

SOURCE OF WATER

Data on source of water were obtained from questionnaire items A22 to A24. Housing units may have received their water supply from a number of sources. A common source supplying water was a *public system only* or a *public system and cistern*. Another source of water may be a *cistern, tanks or drums only* in which rain water was collected. A public standpipe was an elevated tank or vertical storage cylinder or street hydrant which was connected to a public system from which nearby residents draw water. The category *some other source such as an individual well or spring* included water obtained from creeks, rivers, lakes, etc.

Comparability - Data on source of water have been collected in every census since 1940. In 1970 and 1980, data were shown only for year-round housing units.

TELEPHONE IN HOUSING UNIT

Data on telephones were obtained from questionnaire item A19a, which was asked for occupied housing units. A telephone had to be inside the house or apartment for the unit to be classified as having a telephone. Units where the respondent uses a telephone located inside the building but not in the respondent's living quarters were classified as having *no telephone*.

Comparability - The 2020 census question was comparable to that asked in the 2015, 2005, 2000, 1995 and 1990 censuses. It was a new item in the 1990 census.

TENURE

Data for tenure were obtained from questionnaire item A3, which was asked for all occupied housing units. All occupied housing units were classified as either owner-occupied or renter-occupied.

Owner-Occupied - A housing unit was owner-occupied if the owner or co-owner lived in the unit even if it was mortgaged or not fully paid for. The owner or co-owner who lived in the unit was usually the person listed first in the questionnaire. The unit was *Owned by you or someone in this household with a mortgage or loan* if it was being purchased with a mortgage or some other debt arrangement such as a deed of trust, trust deed, contract to purchase, land contract, or purchase agreement. The unit was also considered owned with a mortgage if it was built on leased land and a mortgage existed on the unit.

A housing unit was *Owned by you or someone in this household free and clear (without a mortgage)* if no mortgage or other similar debt was on the house, apartment, or mobile home including units built on leased land if the unit was owned outright without a mortgage. Although owner-occupied housing units were divided between mortgaged and owned-free and clear on the questionnaire, census tabulations show data only for total owner-occupied counts.

Renter-occupied - All occupied housing units which were not owner-occupied, whether they were rented for cash rent or occupied without payment of cash rent, were classified as renter-occupied. *No cash rent* units were separately identified in the rent tabulations. Such units were generally provided free by friends or relatives or in exchange for services such as a resident manager, caretaker, minister, or tenant farmer. Housing units on military bases were also identified in the *No cash rent* category.

Rented for cash rent included units in continuing care, sometimes called life care arrangements. These arrangements usually involved a contract between one or more individuals and a health services provider guaranteeing the individual shelter, usually a house or apartment, and services such as meals or transportation to shopping or recreation.

Comparability - Data on tenure have been collected for Palau since 1930. In 1970, the question on tenure also included a category for condominium and coop-erative ownership. In 1980, condominium units and cooperatives were dropped from the tenure item, and since 1980, only condominium units were identified in a separate question.

Since 1990 and subsequently, the response categories were expanded to allow the respondent to report whether the unit was owned with a mortgage or free and clear (without a mortgage). The distinction between units owned with a mortgage and units owned free and clear was added in 1990 to improve the count of owner-occupied units. Research after the 1980 census indicated some respondents did not consider their units owned if they had a mortgage.

TYPE OF MATERIAL USED FOR FOUNDATION

Data on the *Main Type of Material Used for the Foundation* of the structure were obtained from questionnaire item A11. Housing units were classified according to the type of material used *most* in the construction of the foundation of the structure, which were as follows:

- (a) *Poured concrete*,
- (b) *Concrete posts or blocks*,
- (c) Wood pier or pilings, and
- (d) Metal posts
- (e) *Other* for all other types of construction materials which were not included in any of the specific categories or if there was no foundation.

Comparability - Data on type of material used for foundation were collected for the first time in 1990. In 2005, 2000, 1995, and 1990, data were shown for all housing units. The 2015 and 2020 censuses only showed data for occupied housing units.

TOILET FACILITIES

Data on toilet facilities were obtained from questionnaire item A17. Answers to the question, *Do you have a flush toilet?*, provided data on the number of housing units with *flush toilet*

- (a) inside the unit,
- (b) inside the building,
- (c) outside the building; with (d) *Outhouse or privy*; and (e) *Other or none*.

A flush toilet consisted of any toilet connected to piped water and emptied into public sewer, septic tank, or cesspool.

Comparability - Data on toilet facilities were collected for the first time in 1970. In 1980, and subsequently, the data were not shown separately but were combined with data on water supply and bathtub or shower to determine the presence of complete plumbing facilities.

TYPE OF MATERIAL USED FOR OUTSIDE WALLS

Data in type of material used for outside walls of the structure were obtained from questionnaire item A9, which was asked for both occupied and vacant housing units. Housing units were classified according to the type of material used *most* in the construction of outside walls of the structure, which were as follows:

- (a) *Poured concrete*,
- (b) *Concrete blocks*,
- (c) *Metal*,
- (d) *Wood*,
- (e) *Wood on concrete*,
- (f) *Metal on concrete*, and
- (g) Prefabricated walls
- (h) Cement Board; and (i) *Other* for all other types of construction materials which cannot be described by any of the specific categories.

Comparability - Data on materials for outside walls were collected since 1980 and were shown only for year-round housing units. In 1990, the category *thatch* was dropped from the type of materials used. In 2005, 2000, 1995 and 1990, data were shown for all housing units. The 2015 and 2020 censuses showed data for occupied housing units only, and also added two new categories: Wood on Concrete and Metal on Concrete.

TYPE OF MATERIAL USED FOR ROOF

Data for type of material used for roof of the structure were obtained from questionnaire item A10. Housing units were classified according to the type of material used *most* in the construction of the roof of the structure, which were as follows: *Poured concrete, Metal, and Other* which included palm or pandanus thatch, ceramic tiles, etc.

Comparability - Data on type of materials used for roofs were collected for the first time in 1980 and were shown only for year-round housing units. In 2005, 2000, 1995 and 1990, data were shown for all housing units. The 2015 and 2020 censuses showed data for occupied housing units only, and also picked only the 2 main roofing materials, Poured Concrete and Metal.

UNITS IN STRUCTURE

Data on units in structure (also referred as *type of structure*) were obtained from questionnaire item A2, which was asked for all housing units. A structure was a separate building that either had open spaces on all sides or was separated from other structures by dividing walls that extended from ground to roof. In determining the number of units in a structure, all housing units, both occupied and vacant, were counted. Stores and office space were excluded.

Statistics were presented for the number of housing units in structures of specified type and size, and not for the number of residential buildings.

1-Family House, Detached - This was a 1-unit structure detached from any other any other structure; that is, with open space on all four sides. Such structures were considered detached even if they had an adjoining shed or garage. A one-family house which contained a business was considered detached as long as the building has open space on all four sides. Mobile homes or trailers to which one or more permanent rooms had been added or built were also included.

1-Family House, Attached - This was a 1-unit structure which had one or more walls extending from ground to roof separating it from adjoining structures. In rowhouses (sometimes called townhouses), duplex houses, or houses attached to non-residential structures, each house was a separate, attached structure if the dividing or common wall goes from ground to roof.

2 or More Units - These were units in structures/ buildings containing 2 or more housing units, further categorized as units in structures/buildings with 2, 3 or 4, 5 to 9, 10 to 19, and 20 or more units.

Boat, Houseboat or Yacht - included in this category were boats and houseboats that were occupied as housing units.

Private Institution - hotel, hospital, dormitories, etc

Other - This category was for any living quarters occupied as a housing unit that did not fit the previous categories. Examples that fitted into this category were abandoned cars, tents, campers, and vans.

Comparability - Data on units in structure/building have been collected for Palau since 1940, and on boats since 1980. In 1970 and 1980, these data were shown only for year-round housing units. Since 1990, these data were shown for all housing units. The category tent, *van, etc.* was replaced in 1990 by the category *Other*.

USUAL HOME ELSEWHERE

Data for usual home elsewhere were obtained from questionnaire item R5, which was completed by census enumerators. A housing unit temporarily occupied at the time of enumeration entirely by persons with a usual residence elsewhere was classified as *vacant*. The occupants were classified as having a *Usual home elsewhere* and were counted at the address of their usual place of residence. Typical examples were people in a vacation home and persons renting living quarters temporarily for work.

Limitation of the Data - Evidence from previous censuses suggests that in some area enumerators marked units as *vacant-usual home elsewhere* when they should have marked *vacant-regular*.

Comparability - Data for usual home elsewhere were tabulated for the first time in the 1980 census.

UTILITIES

Data on electric power were obtained from questionnaire item A18, which was asked for all housing units. The census tabulations, however, presented data on electric power for occupied housing units only.

Data on utility costs were obtained from questionnaire items A31 through A34, which were asked for all occupied housing units.

Limitation of the Data - Research has shown that respondents tended to overstate their expenses for electricity and gas when compared to utility company records.

Comparability - Data on utilities were collected for the first time in the 1980 census and continued with the subsequent censuses.

VACANCY STATUS

Data on vacancy status were obtained from questionnaire Section A item AV-1 to AV-3, which was completed by census enumerators. Vacancy status and other characteristics of vacant units were determined by enumerators obtaining information from landlords, owners, rental agents, and others. Vacant units were subdivided according to their housing market classification as follows:

For rent - These were vacant units offered *for rent* and vacant units offered either *for rent or for sale*.

For sale only - These were vacant units being offered *for sale only* including units in cooperatives and condominium projects if the individual units were offered *for sale only*.

Rented or Sold, Not Occupied - If any money rent had been paid or agreed upon but the new renter had not moved in as of the date of enumeration, or if the unit had recently been sold but the new owner had not yet moved in, the vacant unit was classified as *rented or sold, not occupied*.

For Seasonal, Recreational, or Occasional Use - These were vacant units used or intended for use only in certain seasons or for weekend or other occasional use throughout the year. Seasonal units included those used for summer or winter sports or recreation, such as beach cottages and hunting cabins. Seasonal units also included quarters for workers such as herders and loggers. Interval ownership units, sometimes called shared ownership or time-sharing condominiums, were also included here.

For Migrant workers and Other Vacant - If a vacant unit did not fall into any of the classifications specified above, it was classified as *other vacant*. For example, this category included units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

Comparability - Data on vacancy status have been collected since the 1940 census. For 1990, the category *Seasonal/recreational/occasional use* combined vacant units classified in 1980 as *seasonal* and *held for occasional use*. Also, in 1970 and 1980, housing characteristics were generally presented only for year-round housing units. In the 2020, 2015, 2005, 2000, 1995 and 1990 censuses, housing characteristics were shown for all vacant housing units.

VALUE

Data on *Value* (also referred to as *price asked* for vacant units) were obtained from questionnaire item A4, which was asked for housing units that were owned, being bought, or vacant for sale at the time of enumeration. Value was the respondent's estimate of how much the property (house and lot, mobile home and lot or condominium unit) would sell for if it were for sale. If the house or mobile home was owned or being bought, but not the land, the respondent was asked to estimate the combined value of the house or mobile home and the land. For vacant units, value was the price asked for the property.

Value was tabulated for *specified owner-occupied housing units* only. Specified owner-occupied housing units included only one-family houses without a business or medical office on the property. The data for *specified* units excluded mobile homes, houses with a business or medical office, and housing units in multi-unit buildings.

Median Value - The median divides the value distribution into two equal parts. This measure was rounded to the nearest hundred dollars. (for more information on medians, see the discussion under *Derived Measures*.)

Comparability - In 1980, *value* was asked only at owner-occupied or vacant-for sale one-family houses on less than 3 acres with no business or medical office on the property and at all owner-occupied or vacant-for-sale condominium housing units. Mobile homes were excluded.

In 1990 and in subsequent censuses, the question was asked for all owner-occupied housing units with no exclusions. *Value* data were presented for specified owner-occupied housing units only.

VEHICLES AVAILABLE

Data on vehicles available were obtained from questionnaire item A29, which was asked for occupied housing units. These data showed the number of households with a specified number of passenger cars, vans, and pick-up or panel trucks of one-ton capacity or less kept at home and available for the use of household members. Vehicles rented or leased for one month or more, company vehicles, and police and government vehicles were included if kept at home and used for non-business purposes. Dismantled or immobile vehicles were excluded. Vehicles kept at home but used only for business purposes were also excluded.

Vehicles per Household - This was computed by dividing aggregate number of vehicles available by the number of occupied housing units.

Comparability - Data on automobiles available were collected for the first time in the 1980 census.

YEAR HOUSEHOLDER MOVED INTO UNIT

Data on *Year Householder Moved into Unit* were obtained from questionnaire item A7, which was asked for occupied housing units. These data referred to the year of the latest move by the householder. If a householder moved back into a housing unit he/she previously occupied, the year of the latest move was reported. If the householder moved from one apartment to another within the same building, the year the householder moved into the present apartment was reported. The intent was to establish the year the present occupancy by the householder began. The year that the householder moved in was not necessarily the same year other members of the household moved, although in the great majority of cases an entire household moved at the same time.

Comparability - In 1960 and 1970, this question was asked of every person and included in population reports. This item in housing tabulations referred to the year the householder moved in. In 2000, 2005, 2015 and 2020, the question was asked only of the householder, as was done in 1980 and 1990.

YEAR STRUCTURE BUILT

Data on *Year Structure Built* were obtained from questionnaire item A8, which was asked for occupied housing units. Data on year *structure built* referred to when the building was first constructed, not when it was remodeled, added to, or converted. For housing units under construction that met the housing unit definition - that was, all exterior windows, doors and final usable floors were in place, the category *2014 to 2020* was used. For a houseboat or a mobile home or trailer, the manufacturer's model year was assumed to be the year built. The figures shown in census tabulations related to the number of units built during the specified periods that were still in existence at the time of enumeration.

Limitation of the Data - Data on *Year Structure Built* were more susceptible to errors of response and non-reporting than data on many other items because respondents relied on their memory or on estimates by persons who had lived in the neighborhood for along time. Available evidence indicates under-reporting occurred in the older-year structure-built categories, especially *Built in 1980 or earlier*. Data users should refer to the discussion in Appendix C, *Accuracy of Data*, and to the allocation tables.

Comparability - Data on *Year Structure Built* were collected for the first time in the 1940 census. Since then, the response categories have been modified to accommodate the 10-year period between each census. In 2000 and 2005, the category *Not reported* was added, the effect was to minimize the response error mentioned in the paragraph above on limitation of the data. Not reported was replaced in 2015 and 2020 censuses with “*Don't know*”.

DERIVED MEASURES

Census data products included various derived measures, such as medians, means, and percentages, as well as certain rates and ratios. Derived measures that round to less than 0.1 were not shown but indicated as zero. In printed reports, zero was indicated by a dash (-).

Interpolation - Interpolation frequently was used in calculating medians based on interval data and in approximating standard errors from tables. Linear interpolation was used to estimate values of a function between two known values. *Pareto interpolation* was an alternative to linear interpolation. In Pareto interpolation, the median was derived by interpolating between the logarithms of the upper and lower income limits of the median category.

Mean - This measure represents an arithmetic average of a set of values. It was derived by dividing the sum of a group of numerical items (or aggregate) by the total number of items. Aggregates were used in computing mean values. For example, mean family income was obtained by dividing the aggregate of all income reported by persons in families by the total number of families.

Median - This measure represents the middle value in a distribution. The median divides the total frequency into two equal parts: one-half of the cases fall below the median and the other half of the cases exceed the median. The median was computed on the basis of the distribution as tabulated, which was sometimes more detailed than the distribution shown in specific census publications and other data products.

In reports, if the median falls within the upper interval of the tabulation distribution, the median was shown as the initial value of the interval followed by a plus sign (+); if within the lower interval, the median was shown as the upper value of the category followed by a minus sign (-).

Percentages, Rates and Ratios - These measures were frequently presented in census tabulations to compare two numbers or two sets of measurements. These comparisons were made in two ways:

- (a) sub-traction, which provided an absolute measure of the difference between two items, and
- (b) the quotient of two numbers, which provided a relative measure of difference.

APPENDIX C. ACCURACY OF THE DATA

CONFIDENTIALITY OF THE DATA

Every effort has been made to protect the confidentiality of the Republic of Palau Census data, and to make sure that published data do not disclose information about specific individuals, households, or housing units. The procedures are meant to increase the data user's ability to obtain census data, particularly for small areas and subpopulation groups, while maintaining confidentiality of individual responses.

EDITING OF UNACCEPTABLE DATA

The objective of the processing operation was to produce a set of data that describes the population as clearly and accurately as possible. To meet this objective, questionnaires were reviewed and edited during field data collection operations by crew leaders for consistency, completeness, and acceptability. Questionnaires were also reviewed by census clerks in the census office for omissions, certain inconsistencies, and population coverage. For example, write-in entries such as "Don't know" or "NA" were considered unacceptable in certain quantities and/or in conjunction with other data omissions.

As a result of this review operation, a telephone or personal visit follow-up was made to obtain missing information. Potential coverage errors were included in the follow-up, as well as questionnaires with omissions or inconsistencies beyond the completeness and quality tolerances specified in the review procedures.

Subsequent to field operations, remaining incomplete or inconsistent information on the questionnaires was assigned using imputation procedures during the final automated edit of the collected data. Allocations, or computer assignments of acceptable data in place of unacceptable entries or blanks, were needed most often when an entry for a given item was lacking or when the information reported for a person or housing unit on that item was inconsistent with other information for that same person or housing unit. As in previous censuses, the general procedure for changing unacceptable entries was to assign an entry for a person or housing unit that was consistent with entries for persons or housing units with similar characteristics. The assignment of acceptable data in place of blanks or unacceptable entries enhanced the usefulness of the data.

Another way to make corrections during the computer editing process is substitution. Substitution is the assignment of a full set of characteristics for a person or housing unit. Because of the detailed field operations, substitution was not needed for the 2020 Census.

SOURCES OF ERRORS

In any large-scale statistical operation, such as the 2020 Census of the Republic of Palau, human- and machine-related errors do occur. These errors are commonly referred to as nonsampling errors. Such errors include not enumerating every household or every person in the population, not obtaining all required information from the respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. In addition, errors can occur during the field review of the enumerators' work, during clerical handling of the census questionnaires, or during the electronic processing of the questionnaires.

To reduce various types of nonsampling errors, a number of techniques were implemented during the planning, data collection, and data processing activities. Quality assurance methods were used throughout the data collection and processing phases of the census to improve the quality of the data.

APPENDIX D.
Collection and Processing Procedures

ENUMERATION AND RESIDENCE RULES

In accordance with Government of Palau practice, each person was to be enumerated as an inhabitant of his or her “usual residence” in the 2020 census. Usual residence is the place where the person lives and sleeps most of the time or considers to be his or her usual residence. This place is not necessarily the same as the person’s legal residence or voting residence. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there might be appreciable differences in some areas.

The implementation of this practice has resulted in the establishment of rules for certain categories of persons whose usual residence is not immediately apparent. Furthermore, this practice means that persons were not always counted as residents of the place where they happened to be staying on Census Day (April 13, 2020).

Enumeration Rules

Each person whose usual residence was in the Republic of Palau was to be included in the census, without regard to the person’s legal status or citizenship. As in previous censuses, persons in Palau specifically excluded from the census were foreign travelers who had not established a residence.

Persons with a usual residence outside Palau were not enumerated in the 2020 Census. On the other hand, residents of Palau temporarily abroad were to be enumerated at their usual residence in Palau.

Residence Rules

Each person included in the census was to be counted at his or her usual residence — the place where he or she lives and sleeps most of the time or the place where the person considers to be his or her usual home. If a person had no usual residence, the person was to be counted where he or she was staying on April 13, 2020.

Persons temporarily away from their usual residence, whether in Palau or abroad, on a vacation or on a business trip, were counted at their usual residence. Persons who occupied more than one residence during the year were counted at the one they considered to be their usual residence. Persons who moved on or near Census Day were counted at the place they considered to be their usual residence.

Persons Away at School — College students were counted as residents of the place in which they were living while attending college. Children in boarding schools below the college level were counted at their school dormitory.

Persons in Institutions — Persons under formally authorized, supervised care or custody, such as in jails; detention centers; juvenile institutions; nursing, convalescent, and rest homes for the aged and dependent; or homes, schools, hospitals, or wards for the physically handicapped, mentally retarded, or mentally ill, were counted at these places.

DATA COLLECTION PROCEDURES

The 2020 census of Palau was conducted using modified list/enumerate procedures (formerly called conventional or door-to-door enumeration).

Enumeration of Housing Units

Beginning in early April 2020, enumerators visited and listed every housing unit and conducted a personal interview, asking the questions as worded on the census questionnaire and recording the answers. A single questionnaire contained all questions asked of every persons and every housing unit. The questionnaire contained both basic and detailed population and housing questions. Only housing information was obtained from vacant housing units.

Field Follow up

Follow up enumerators visited each address for which questionnaires were missing to obtain a completed questionnaire. If a follow up enumerator determined that the unit was vacant on Census Day, regardless of the present occupancy status, the enumerator obtained only housing information about the unit from a knowledgeable source and filled out a questionnaire for that unit, completing specified items in the questionnaire for vacant units.

Coverage and Edit-Failure Follow up— The enumerators conducted an initial check of the questionnaires for completeness and consistency. The census office staff performed additional coverage and edit checks. Those households for which questionnaires did not meet specific quality standards because of incomplete information were contacted by personal visit to obtain the missing information.

PROCESSING PROCEDURES

The 2020 Census of Palau questionnaire was designed as a keyable document. The information supplied to the enumerator by the respondent was recorded by marking the answers in the appropriate answer boxes and, in some cases, entering a write-in response.

Enumerators returned all completed questionnaires to the Census office where the questionnaires were checked in and edited for completeness and consistency of the responses. Once all data collection activities were complete, the questionnaires were coded in the Census office. All write-in entries (ethnicity, relationship, language, migration, place of birth, parental birthplace, place of work, industry and occupation) were coded. After all coding operations were complete, the data entry clerks keyed all the responses to the questions on all the questionnaires using the CSPro entry package, including the codes for the write-in entries.

The disks containing the keyed data were then processed on microcomputers using the Consistency and Correction (CONCOR) package for editing the data and the Census Tabulation System (CENTS) for tabulating the data.

COMMENTS

CS9. FINAL INTERVIEW STATUS

HOUSEHOLD ROSTER: ALL INDIVIDUALS

Please give me the name of each person who was sleeping here **at 12.01 AM (Monday, April 13th, 2020)**, including all persons staying here who have no other home. Also list any person who usually resides here, but was visiting another country, another island and another house, on the Census night. Begin with head or acting head. Please include babies, children, old people and visitors.

Household Member [HM]

The head or acting head is the member who owned the home, bought the home, or rented it. If there is no such person, start with any adult member.

[HM] R1. PERSON NAME		R2. SEX	R3. AGE IN COMPLETED YEARS	R4. RELATIONSHIP TO HOUSEHOLD HEAD	R5. WHERE DO THESE PEOPLE USUALLY LIVE?
<ul style="list-style-type: none"> - Usual residents: roommates, boarders, live-in employees, etc. - Persons temporarily in another country: business trip, holiday, hospital - People who stay here most of the week while working even if they have a home elsewhere - Babies just born in the hospital 		1 = Male 2 = Female Write the appropriate code in the box	enter 000 for child under 1 year	01. Head/Acting head 02. Spouse 03. Unmarried Partner 04. Child (Natural or adopted) 05. Stepchild 06. Brother/Sister 07. Nephew/Niece 08. Father/Mother 09. Grand/Great Grandchild 10. Other Relative 11. Roomer/Boarder 12. Domestic Worker/Helper 13. Other non-relative	For people listed who do not USUALLY live here, what is the location of ...'s usual residence? Use State and Hamlet codes for Palau, or write in country name. For usual residents NOT here on April 13 th , enter the State and Hamlet code for this residence.
[HM] TO EXCLUDE					
<ul style="list-style-type: none"> - Persons away in institutions: prison, nursing home - College students living elsewhere while in college - High school students in boarding schools (living in dormitories) - Babies born after April 13, 2020 - Persons who came to Palau after April 13, 2020 (if citizen or resident who was traveling, to include)

SECTION A: HOUSING

A1-1. When you told me the names of persons living here on April 13th, did you leave anyone out because you were not sure if the person should be listed?

1. Yes 2. No
Mark the appropriate box with an X

A1-2. When you told me the names of persons living here on April 13th, did you include anyone even though you were not sure that the person should be listed?

1. Yes 2. No
Mark the appropriate box with an X

Determine if persons should be added to or removed from the Household Roster based on the instructions for Item R1

A2. Which best describes this building?
Include all apartments, flats, etc., even if vacant.

1. A one-family house detached from any other house
2. A one-family house attached to one or more houses
3. A building with 1 to 9 apartments
4. A building with 10 or 19 apartments
5. A building with 20 or more apartments
6. A boat, houseboat, or yacht
7. Private Institution (dormitory, prison, hospital, etc.)
8. Temporary structure, e.g. barracks
9. Other (*specify*)

If selected 7 and 8, SKIP TO A7

Write the appropriate code in the boxes.

(Other specify)

A3. Is this (house/apartment)

1. Owned by you or someone in this household with a mortgage or loan?
2. Owned by you or someone in this household free and clear? (*no loan*)
3. Rented? (*with any payments made by member(s) of the household*)
4. Occupied without payment? (*including provided by employer*)

Write the appropriate code in the box

A4. Ask only if response to Item A3. is "1" or "2" (owns or is buying)

What is the value of this property; that is, how much do you think this house and land would sell for if it were for sale?

\$

A5. Ask only if response to Item A3. is "3" or "4"

What is the monthly rent? If rent is NOT PAID MONTHLY, see instructions on how to figure a monthly rent.

\$

VACANT UNITS: FOR ENUMERATOR USE

AV-1. Vacancy Status

1. For rent
2. For sale only
3. Rented or sold, not occupied
4. For seasonal, recreational, or occasional use
5. For migrant workers
6. Other vacant

Write the appropriate code in the box

AV-2. Is this dwelling boarded up?

1. Yes 2. No *Mark the appropriate box with an X*

AV-3. Months vacant

- | | |
|----------------|----------------|
| 1. Less than 1 | 5. 12 up to 24 |
| 2. 1 up to 2 | 6. 24 or more |
| 3. 2 up to 6 | 7. Don't know |
| 4. 6 up to 12 | |

Write the appropriate code in the box

A6. Is there a household based enterprise attached to this dwelling (Such as a taxi, store/stall, or bakery)?

1. Yes 2. No *Mark the appropriate box with an X*

If yes:

Type of Enterprise	Line # of Manager	# of household members usually/regularly involved
<input style="width: 100%;" type="text"/>	<input style="width: 50%;" type="text"/>	<input style="width: 50%;" type="text"/>
<input style="width: 100%;" type="text"/>	<input style="width: 50%;" type="text"/>	<input style="width: 50%;" type="text"/>
<input style="width: 100%;" type="text"/>	<input style="width: 50%;" type="text"/>	<input style="width: 50%;" type="text"/>

A7. What year did (*Person listed on line 1*) move into this house/apartment?

A8. About when was this building built?

- | | |
|-----------------|--------------------|
| 1. 2018 or 2019 | 6. 1990 to 1999 |
| 2. 2017 to 2018 | 7. 1981 to 1989 |
| 3. 2016 to 2017 | 8. 1980 or earlier |
| 4. 2010 to 2015 | 9. Don't know |
| 5. 2000 to 2009 | |

Write the appropriate code in the box

A9a. What is the MAIN type of material used for the outside walls of this building?

- | | |
|---------------------|------------------------|
| 1. Poured concrete | 6. Metal on concrete |
| 2. Concrete blocks | 7. Prefabricated walls |
| 3. Metal | 8. Cement board |
| 4. Wood | 7. Other |
| 5. Wood on concrete | |

Write the appropriate code in the box

SECTION A: HOUSING (continued)

A9b. Are the walls insulated? 1. Yes 2. No
Mark the appropriate box with an X

A10a. What is the MAIN type of material used for the roof of this building?

1. Poured concrete
2. Metal
3. Other

Write the appropriate code in the box

A10b. Is the roof insulated? 1. Yes 2. No
Mark the appropriate box with an X

A11. What is the MAIN type of material used for the foundation of this building?

1. Concrete
2. Concrete posts or blocks
3. Wood pier or pilings
4. Metal posts
5. Other

Write the appropriate code in the box

A12. How many rooms do you have in this house/apartment?
Count living rooms, dining rooms, kitchens, and bedrooms, but do NOT count bathrooms, balconies, foyers, or halls.

Enter #

A13. How many bedrooms does this dwelling/apartment have?

Enter #

A14. Do you have hot and cold piped water?

1. Yes, hot and cold piped water in this unit
2. No, only cold piped water in this unit
3. No, only cold piped water outside this unit
4. No piped water

Write the appropriate code in the box

A15. *If Yes*, what type of energy does your water heater use most?

1. Electricity
2. Gas
3. Solar
4. Other fuels

Write the appropriate code in the box

A16. Do you have a bathtub or shower?

1. Yes, in this unit
2. Yes, in this building
3. Yes, outside this unit/building
4. No

Write the appropriate code in the box

A17. Do you have a flush toilet?

1. Yes, in this unit
2. Yes, in this building
3. Yes, outside this building
4. No, outhouse or privy
5. No, other or none

Write the appropriate code in the box

A18a. Does this house/apartment have electric power?
 1. Yes 2. No
Mark the appropriate box with an X

A18b. Do you have solar panels? 1. Yes 2. No
 If Yes: A. On-grid B. Off-grid
Mark the appropriate box with an X

A19a. Does this house/apartment have any of the following? *tick all that apply*

<input type="checkbox"/> 1. Telephone	<input type="checkbox"/> 4. Microwave Oven
<input type="checkbox"/> 2. Television	<input type="checkbox"/> 5. Refrigerator/Freezer
<input type="checkbox"/> 3. Personal Computer/Laptop	<input type="checkbox"/> 6. Internet
	<input type="checkbox"/> 7. Cellphones <input type="text"/>

A19b. Are any of these appliances energy efficient? *tick all that apply*

<input type="checkbox"/> 1. Personal Computer/Laptop	<input type="checkbox"/> 3. Refrigerator/Freezer
<input type="checkbox"/> 2. Microwave Oven	<input type="checkbox"/> 4. Television
	<input type="checkbox"/> 5. Internet

A20. Do you have a battery operated radio? *Count car radios, transistors, and other battery operated sets in working order or needing only new battery for operation.*

1. Yes 2. No
Mark the appropriate box with an X

A21a. Do you have air conditioning?

1. Yes, a central air-conditioning system
2. Yes, 1 individual room unit
3. Yes, 2 or more individual room units
4. No

Write the appropriate code in the box

A21b. Is it energy-saver?
 1. Yes 2. No
Mark the appropriate box with an X

A22. Do you get water from:

1. A public system only?
2. A cistern, tanks, or drums only?
3. Some other source like an individual well or a spring?

Write the appropriate code in the box

A23. Do you use the public water system for cooking?

<input type="checkbox"/> 1. Yes	<input type="checkbox"/> 3. No, use bottled water
<input type="checkbox"/> 2. No, use rainwater	<input type="checkbox"/> 4. No, use both rainwater and bottled water

Write the appropriate code in the box

A24. Do you use the public water system for drinking?

<input type="checkbox"/> 1. Yes	<input type="checkbox"/> 3. No, use bottled water
<input type="checkbox"/> 2. No, use rainwater	<input type="checkbox"/> 4. No, use both rainwater and bottled water

Write the appropriate code in the box

SECTION A: HOUSING (continued)

SECTION B: CORE AGRICULTURE AND FISHING

A25. Is this building connected to a public sewer?

1. Yes, connected to public sewer
2. No, connected to septic tank or holding tank
3. No, use other means

Write the appropriate code in the box

A26. Are your MAIN cooking facilities inside or outside this house/apartment?

1. Inside this house/apartment
2. Outside (summerhouse, outside kitchen)
3. No cooking facilities

Write the appropriate code in the box

A27. Which FUEL is used MOST for cooking in this (house/apartment)? *Tick all that apply*

- 1. Electricity
- 2. Gas: bottled or tank (LPG, Butane)
- 3. Kerosene
- 4. Biomass (charcoal, wood, etc.)
- 5. Other (write in)
- 6. No fuel used

A28. Do you have a sink with piped water?

1. Yes 2. No *Mark the appropriate box with an X*

A29. How many automobiles, vans, and trucks of one-ton capacity or less are kept at home for use by members of this household? *Enter #*

A30a. If any boat, how many of each type is kept at home for use by members of this household?

- | For Business | For Recreation |
|---------------------------------------|---------------------------------------|
| <input type="checkbox"/> Canoe | <input type="checkbox"/> Canoe |
| <input type="checkbox"/> Kayak | <input type="checkbox"/> Kayak |
| <input type="checkbox"/> Sailing boat | <input type="checkbox"/> Sailing boat |
| <input type="checkbox"/> Power boat | <input type="checkbox"/> Power boat |

A30b. If any Power boat selected:

What type of engine:

Main use: *Tick all that apply*

- 1. Commercial
- 2. Recreation
- 3. Subsistence

What is the average monthly cost for:

A31. Electricity for this house/apartment?

\$

A32. Gas (not gasoline and kerosene) for this house/apartment?

\$

A33. Water for this house/apartment?

\$

A34. Kerosene, oil, coal, etc. for this house/apartment?

\$

B1. Did this household operate any land for agricultural purposes during the last agricultural year?

(or has any member of this household operated any land for agricultural purposes during the last agricultural year?) Last agricultural year refers to the period from April 13th, 2019 to April 13th, 2020.

1. Yes 2. No

Mark the appropriate box with an X

B2. What is the total area of all the land used for agricultural purposes? (if known)

square meters

B3. How many parcels of land are used for agriculture?

That is, how many separate pieces of land make up this total area reported in B2.?

Enter #

Supplementary Agriculture and Fishing Questions

BS-1. During the last agricultural year, did this household have any of the following? *Tick all that apply*

- 1. Crops grown in this village
- 2. Crops grown in other places
- 3. Kitchen garden
- 4. Cropland rented from someone else
- 5. Permanent crops
- 6. Agricultural land left fallow

BS-2. Does your household own all the crops? (not communal or shared with another household)

1. Yes 2. No

Mark the appropriate box with an X

BS-3. Does this household own all the fruit trees or other permanent crops?

1. Yes 2. No

Mark the appropriate box with an X

Did this household have any? *Mark the appropriate box with an X*

BS-4. Temporary fallow land during the last agricultural year?

1. Yes 2. No

BS-5. Temporary meadows during the last agricultural year? (Land temporarily cultivated with forage crops, for mowing or pasture, for less than five years.)

1. Yes 2. No

BS-6. Permanent meadows during the last agricultural year? (Land used permanently for growing forage crops for five years or more, whether naturally or by cultivation.)

1. Yes 2. No

SECTION B: CORE AGRICULTURE AND FISHING

BS-7. Did this household have any land in other uses during the last agricultural year?

1. Yes 2. No

If yes:

BS7a. For what purpose? (write in: e.g., lease, etc.)

If leased.

BS7b. For what purpose was the land leased? Examples: hotel development, golf course, apartment construction, etc. (write in)

BS7c. How long is the land leased for? (write in)

BS7d. Does the leased land allow access to other agricultural land?

1. Yes 2. No

BS8. Irrigated land during the last agricultural year?

1. Yes 2. No

Is this household now raising any: Write in

Person 2

Person 3

BS-19. In the last 12 months, what was the main use of the produce from this household's crop and livestock activities?

1. Sale for money
2. Exchange for other production
3. Home consumption
4. All the above

Write the appropriate code in the box

BS-20. Does this household have any forest and other wooded land?

1. Yes 2. No

Mark the appropriate box with an X

BS-21. Has any member of the household gone fishing in the last 12-months? If 2. go to section C

1. Yes 2. No

Mark the appropriate box with an X

If yes, what was the:

BS-22. Main purpose of fishing?

1. Home consumption
2. Sale
3. Mainly home consumption, but some for sale
4. Mainly sale, but some for home consumption
5. Other

Write the appropriate code in the box

BS-23. Type of fishing activity? Tick all that apply

- 1. Net
- 2. Trolling
- 3. Spear (Biskang, Balech)
- 4. Hook & line
- 5. Gleaning (collecting from the sea)
- 6. Other (write in)

BS-24. Location of fishing activity? Tick all that apply

- 1. Mangroves
- 2. Lagoon
- 3. Reef
- 4. Offshore
- 5. Other (write in)

BS-25. Type of marine food targeted? Tick all that apply

- 1. Invertebrates (sea cucumber, squid, octopus, lobster, clams, crabs)
- 2. Reef fish (grouper, parrot fish, rabbit fish, emperor, surgeon fish)
- 3. Pelagic fish (skipjack, tuna, wahoo, kawa kawa, rainbow runner, billfish)
- 4. Deepwater (snapper, sebus)
- 5. Other (eels, rays, shark, freshwater fish, turtle)

Household numbers (or Dwelling code) will be numbered within each EA 01 to 99. For EAs with 100+

Households use letters for the first digit, starting with A.

For example: Household 100 = A0, 101=A1, 102=A2, . . . , household 110 = B0, 111 = B1, . . . 120 = C0, 121 = C1, etc.
