

PACIFIC LINGUISTICS

Series B - No. 33

A GRAMMAR OF THE NORTHERN DIALECT OF SAKAO

by

J. B. M. Guy

Department of Linguistics
Research School of Pacific Studies
THE AUSTRALIAN NATIONAL UNIVERSITY

PACIFIC LINGUISTICS is published by the *Linguistic Circle of Canberra* and consists of four series:

SERIES A - OCCASIONAL PAPERS
SERIES B - MONOGRAPHS
SERIES C - BOOKS
SERIES D - SPECIAL PUBLICATIONS.

EDITOR: S.A. Wurm. ASSOCIATE EDITORS: D.C. Laycock, C.L. Voorhoeve.

ALL CORRESPONDENCE concerning PACIFIC LINGUISTICS, including orders and subscriptions, should be addressed to:

The Secretary,
PACIFIC LINGUISTICS,
Department of Linguistics,
School of Pacific Studies,
The Australian National University,
Box 4, P.O.,
Canberra, A.C.T. 2600.
Australia.

Copyright © J.B.M. Guy.
First published 1974.

The editors are indebted to the Australian National University for help in the production of this series.

This publication was made possible by an initial grant from the Hunter Douglas Fund.

National Library of Australia Card number and ISBN 0 85883 104 X

ACKNOWLEDGEMENTS

First and foremost my thanks go to R.P. Linossier, ainsi qu'aux Soeurs de la mission de Port-Olry, for their help in all matters and their hospitality, to informants, and to Professor Wurm, Drs Dutton, Laycock, Tryon, and Voorhoeve, for their encouragements, suggestions and advice.

00. INTRODUCTION

00.1. This study is based on a corpus totalling about one hundred thousand morphemes collected or elicited mainly in Port-Olry (Espiritu Santo, New Hebrides) over a period April to August 1970 and May 1971 to February 1972.

00.2. Place names are spelt as they appear on the map of Espiritu Santo published by the Institut Géographique National (Paris).

00.3. Languages, dialects and subdialects are designated by the names under which they are known to their speakers, or, if no such name is available, by the name of the island or the village where they are, or used to be, spoken.

00.4. The phonetic symbols used are those recommended by the International Phonetic Association, except for the alveolar trill, which is noted \mathfrak{r} , the proper symbol not being available in the typefaces used. The interlabials of Vao are noted by the symbols for bilabials surmounted by a dash, e.g. \bar{p} , \bar{m} , $\bar{\beta}$, \bar{m} .

00.5. This work comprises seven sections of which this introduction is the first.

00.5A. The second section is concerned with generalities about the Sakao language, its genetic relationship with other languages of the New Hebrides, and is illustrated by brief comparative word-lists of Sakao, Vao, Tolomako¹ and Akei, unphonemicised.

00.5B. The third section, entitled "Phonology", comprises five parts:

¹Also known as Marina, Big Bay, Tikipi.

a) The first part defines the phonological phrase and examines the intonation and stress patterns.

b) The second part gives a phoneme inventory with a list of minimal pairs, followed by a fine phonetic description.

c) The third part describes the system of regressive vowel harmony - a peculiar feature of Sakao - as functioning in the speech of the main informant, Eugène Alyet.

[Eugène Alyet, aged 55, of Port-Olry, is the repository of traditional songs and tunes and is considered by his fellow-villagers to speak a pure brand of Sakao, i.e. free of influences from the southern dialect of Hog-Harbour and from Tolomako, another language spoken in Port-Olry by people originary from Big Bay.]

d) The fourth part consists of observations on the phonological divergences found to occur between idiolects.

e) The fifth part deals with the obligatory and the optional morpho-phonological changes occurring within the phonological phrase, and with the structure of Sakao words.

00.5C. The fourth section, entitled "Morphology", deals with morphemes and their inflections. Since references to the morphology are made in earlier sections, it is necessary to give here an explanation of the notions underlying that chapter.

Sakao morphs and morphemes can be divided into two main categories: free and bound. Bound morphs and morphemes are further dividable into construct, suffixing, enclitic, determining and inflectional.

Suffixing morphs always occur bound to an immediately following suffix which is either a personal pronominal suffix - usually denoting possession - or an ancillary pronominal suffix itself immediately followed by another morpheme.¹

Construct morphs always occur bound to an immediately following morpheme other than a pronominal suffix.

Enclitic morphs are represented by one morpheme which always occurs bound to an immediately following morpheme with which it fuses.

Determining morphemes are those morphemes which always occur following - immediately or mediately - another morpheme which they determine.

Inflectional morphemes are markers of grammatical categories such as number, mode, aspect, etc.

There is most often a one-to-one correspondence between suffixing and construct morphs, e.g. arko and ark both mean '*trunk (of a tree)*',

¹This ancillary pronominal suffix, -n, is related to the Fijian ni, e.g. ulu-ni-vanua '*head of land*', i.e. '*mountain*'.

but the former is a suffixing morph, the latter a construct one. This correspondence often involves three morphs, two of which are suffixing ones, e.g. $\text{æ}\beta\delta\text{æ}$, $\text{æ}\beta\delta\text{y}$ and $\text{æ}\beta\text{y}\delta$ all mean 'head'; the former two are suffixing morphs, the first one being used with the 3rd person singular and 1st person inclusive plural pronominal suffixes, the other with other pronominal suffixes; the latter is a construct morph. Finally, some suffixing morphs have no construct counterpart and vice versa. For reasons purely of ease of description, construct and suffixing morphs are considered to constitute two separate categories of morphemes; thus $\text{æ}\beta\text{y}\delta$ 'head' is said to be a construct morpheme, and $\text{æ}\beta\delta\text{y}$ a suffixing one; the form $\text{æ}\beta\delta\text{æ}$ is then treated as an allomorph of the suffixing morpheme $\text{æ}\beta\delta\text{y}$, and called "lower allomorph".¹

Finally, a morpheme immediately following a construct morpheme or a pronominal suffix immediately following a suffixing morpheme is said to fulfill the function of regime, and a morpheme determining a preceding morpheme or morphemes to fulfill the function of expansion.

00.5D. The fifth section, entitled "Grammar", is concerned with phrase-level syntax, and comprises three parts.

In the first part, phrase formulae are given stating the constituents of each type of phrase, *excluding all regimes and expansions*.

In the second part, all regimes and expansions - some obligatory, some optional - of the phrase-constituents are given, thus enabling all phrase-types to be generated.

In the third part, expansions which follow phrases as hitherto generated are given. These expansions may determine the referent of the phrase as a whole or certain morphemes contained in the phrase.

00.5E. The sixth section, entitled "Syntax", is concerned with sentence-level syntax and is organised on the same principles as the Grammar.

In a first part, sentence formulae are given with, for basic constituents, phrases with their expansions and regimes as defined in the Grammar. These sentence formulae are, like the phrase formulae of the Grammar, reduced to the barest essentials.

In a second part are detailed the four syntactic processes by which these sentence formulae can be - in the proper sense of the term this time - expanded. These processes are: supplementation (covering apposition and relative clauses), complementation (roughly corresponding to

¹The vowel of the lower allomorph is usually lower than that of the basic form. Moreover, the suffixes requiring the use of the lower allomorph derive from forms containing a low vowel (see 0.2.5.).

the use of relator-axis phrases), adjunction (akin to coordination) and juxtaposition (unmarked coordination).

The third part deals with non-sentential forms such as interjections.

00.5F. The seventh section is an appendix containing:

- a) Notes on the diverse ways of expressing numbers above ten.
- b) A sample text, translated and parsed.
- c) A text in Hog-Harbour and its equivalent in Port-Olry. Inter-linear and running translations are provided.
- d) A bibliography.
- e) An index.

00.6. ORTHOGRAPHY

00.6A. The symbol # marks the beginning of an utterance.

00.6B. Word boundaries are marked:

a) By a raised dot, i.e. · , between elements of a compound word, when the boundary tends to disappear in fast speech, resulting in the preceding syllable becoming unstressed.

b) By a hyphen:

between a verb or an adjective and its expansions and between these expansions themselves, e.g. ɣam-ré-ra-jan-hoβ 'they follow it, dragging pigs as they go', where ra 'pig', jan 'to go' and hoβ 'to follow it' are expansions of ré 'to drag it'.

Between a construct morpheme other than a non-syllabic construct preposition, and its regime, e.g. æβyð-amarkar 'heads of children', lɪki-mar 'near the chimney-stacks'¹.

c) Elsewhere, by a space.

00.6C. Obligatory lost consonants (see 1.7.4.) are written when followed by a word boundary, and left out elsewhere, e.g. kam malam 'this person came' where the m of kam is lost.

00.6D. The semi-consonants, w and j, are normally left out in those environments where they are almost always lost (see 1.7.4.), e.g. uyð for uwyð 'jungle'.

00.6E. When given out of context and without their regime, construct morphemes are written followed by the symbol = , and suffixing morphemes

¹Deacon (1929:467).

followed by a hyphen, the lower allomorph only being given, if available.¹

00.6F. In the syntax, square brackets ([]) are used to show phrase boundaries, e.g. [kam] [malam] '[*this person*] [*came*]'

00.6G. Punctuation

A slash (/) denotes a sentence-final non-interrogative intonation (see 1.2.4.), and two raised dots (¨) a sentence-medial suspensive intonation (see 1.2.6.). The question-mark and the semi-colon are used to denote respectively the interrogative intonation (see 1.2.5.) and the sentence-medial expectative intonation (see 1.2.7.).

¹The basic form can be derived from the lower allomorph, but not vice versa (see 2.6.2.).

0. GENERALITIES ON THE SAKAO LANGUAGE

0.1. INTRODUCTORY REMARKS

0.1.1. Sakao is a Melanesian language of Espiritu Santo (New Hebrides) spoken by approximately 1000 inhabitants of the north-eastern peninsula of the island in and north of the villages of Kolé and Lowérié.

0.1.2. This study is concerned with the northern dialect of Sakao, henceforth referred to as Sakao, which is spoken north of Hog-Harbour up to Cape Queiros or Dzélé. A southern dialect is spoken in and south of Hog-Harbour, and differs from Sakao only on minor points of grammar and phonetics.

0.1.3. Very little study had been done previously on this language, only word-lists of Port-Olry and Hog-Harbour and partial translations of the Bible in Hog-Harbour being available. Cf. Bibliography.

0.2. TYPOLOGY

0.2.1. Tryon (1972:70) tentatively distinguishes between two language types in the New Hebrides, i.e. Oceanic and "Melanesian", the former being characterised by a simple phonology and morphology and a high content of proto-Oceanic lexical forms, the latter by complex phonologies and morphologies and a higher content of proto-Austronesian forms.

Sakao then would distinctly belong to the "Melanesian" type as regards its phonology and morphology, but very much less so as regards its lexicon.

For its phonology and morphology are indeed complex, but its lexicon shows more affinities with the Oceanic-type languages of the New Hebrides than with the "Melanesian"-type ones.

0.2.2. Sound correspondences between Sakao and three other New Hebridean languages shall now be briefly examined, the aforesaid languages being Tolomako, an Oceanic-type language spoken on the western coast of Big Bay (Espiritu Santo) from Tourébiou to Malao and by part of the population of Port-Olry, Akei, an Oceanic-type language spoken within a triangle Tasiriki-Bilibil-Waylapa (Espiritu Santo), and Vao, a "Melanesian"-type language spoken on the island of Vao, off the north-eastern coast of Malekula (alias Mallicolo).

0.2.3. Stops

Like most languages of the northern New Hebrides, Sakao has only one series of stops, as against two (voiceless and prenasalised voiced) for most languages of the southern islands, e.g. Tolomako, Akei and Sakao have three stops: p, t, k, and Vao seven: p, p̄, t, k, mb, m̄b, nd.

To the stops of Tolomako, Akei and Vao usually correspond Sakao fricatives, and to their fricatives, Sakao semi-consonants or zero, e.g.

Tolomako	Akei	Vao	Sakao	
na βu'luku	na βu'luku	βu'lukh	u'lɪyɣ	<i>my hair</i>
na 'reku	na pa'tuku	mba'tukh	æ'βðyɣ	<i>my head</i>
na 'poe	na 'poe	'nambo	nɔβ	<i>pig</i>
na 'toa	na 'toa	'nato	nɔð	<i>fowl</i>
na 'yutu	na 'utu	na'yuth	nøð	<i>louse</i>
na 'toβu	na 'toβu	na'toβ̄	æ'ðø	<i>sugar-cane</i>
na βe'tali	na βo'tali	βete	i'ðɛl	<i>banana</i>
na 'para	na 'para	ne'la	a'βar	<i>spider</i>
na 'oβo	na 'aka	nu'akh	a'aɣ	<i>canoe</i>

0.2.4. To the interlabials of Vao usually correspond Sakao dentals:

Tolomako	Akei	Vao	Sakao	
na ne'neku	na me'meku	m̄em̄ekh	æ'næɣ	<i>my tongue</i>
na 'natsi	na 'matsi	na'm̄as	ɛ'nes	<i>fish</i>
na ya'tani	na a'pani	ɣam̄ban	a'ðɛn	<i>sail</i>

0.2.5. The post-tonic vowels of Tolomako, Akei and Vao are lost in Sakao and tonic vowels diversify as per the following table (overleaf):

		Lost post-tonic vowel		
		a, e or o	i or u	
Tonic vowel of Tolomako or Akei	a	a	ɛ	Sakao
	e	ɐ	æ	
	o	ɔ	œ	
	i or u	æ	y	

Note. This table is valid for most cases of Tolomako or Akei tonic vowels followed and preceded by a consonant other than a fricative.

0.2.6. This vowel diversification resulting from the loss of post-tonic vowels is one of the causes of the great morphological complexity of Sakao, e.g. the case of obligatorily possessed nouns:

Tolomako	Sakao	
na tsi'ɣoku	æsw'ŋæɣ	<i>my mouth</i>
na tsi'ɣona	ɔsw'ŋɔn	<i>his mouth</i>
na 'tsiyo na 'siyo	æ'sæŋ e'hi	<i>the beak of the king-fisher</i>

0.2.7. To the article na corresponds in Sakao polysyllabic nouns an initial vowel or, for some, zero, and in monosyllabic nouns an initial n, e.g.

Tolomako	Sakao	
na 'matsa	a'mas	<i>club</i>
na 'teru	æ'ðær	<i>post</i>
na 'sule	æ'hæɪ	<i>stone</i>
na 'natsi	ɛ'nes	<i>fish</i>
na 'ɣutu	nøð	<i>louse</i>
na 'toa	nɔð	<i>fowl</i>
na a'βua	no	<i>turtle</i>
na 'ɣatsi	nar	<i>black biting ant</i>
na βe'tali	i'ðeɪ	<i>banana</i>
na ɣata'tia	a'ðði	<i>moon</i>
na βu'luna	u'læn	<i>his hair</i>

0.2.8. In its personal pronouns, Sakao has retained the fourfold distinction singular-dual-trial-plural. The trial, however, has taken on the meaning of a limited plural (from three to usually about ten), e.g. table on next page.

	TOLOMAKO	SAKAO
<i>Singular</i>		
1st person	i 'nau	jæn
2nd	i 'niyo	i
3rd	i 'nie	ni
<i>Plural</i>		
1st inclusive	i 'yitse	jør
1st exclusive	i ka'namu	yam
2nd	i ka'niu	ye
3rd	i 'yire	jør
<i>Dual</i>		
1st inclusive	i yitse'rua	jɔ'ro
1st exclusive	i kanamu'rua	yam'ru
2nd	i kani'rua	yɔ'ru
3rd	i yire'rua	jɔ'ru
<i>Trial</i>		
1st inclusive	i yitse'tolu	jør'ðæɪ
1st exclusive	i kanamu'tolu	yam'ðæɪ
2nd	i kani'tolu	yðæɪ
3rd	i yire'tolu	jær'ðæɪ

0.2.9. The inflection of Sakao verbs for person, however, does not quite correspond to the personal pronouns. For Sakao has an indefinite person covering the meanings of French *on*, German *man*, and of all dual and trial Sakao personal pronouns. Besides, verbal personal prefixes present only a threefold distinction for person in the plural: 1st inclusive, 2nd exclusive (i.e. '*you but not they*'), and all others. Those prefixes seem to be more closely related to Vao than to Tolomako, e.g.

SAKAO (prefixes)	Realis	Irrealis
1st sg.	am	a
2nd sg.	m	zero
3rd sg.	mV ¹	yɪ
Indefinite	tɪm	tɪ
1st incl. pl.	tam	ta
2nd excl. pl.	y+m	yɪ
others pl.	yam	ya

¹V is a vowel partially assimilating to that of the following syllable.

VAO (prefixes)	Realis	Irrealis
1st sg.	nom	yu
2nd sg.	yom	yo
3rd sg.	mo	ya
1st incl. pl.	ram	ra
1st excl. pl.	kam	ka
2nd pl.	kem	ke
3rd pl.	nam	na

TOLOMAKO (clitics)	Realis	Irrealis
1st sg.	a	ai
2nd sg.	o	oi
3rd sg.	mo	i
1st incl. pl.	te	ti
1st excl. pl.	ka	kai
2nd pl.	ko	koi
3rd pl.	te	ti

0.2.10. Sakao verbal stems may combine to form close-knit verbal strings that may incorporate an object. A suffix, *i_n*, adds a participant to verbs or close-knit verbal strings or restores the transitivity of those verbal strings which the incorporation of adverb-like elements has made intransitive. This suffix is probably related to the Tolomako preposition *ne* (*ni* preceding proper nouns and pronouns), which marks an indirect object, an instrumental, or a locative.

CHAPTER 1: PHONOLOGY

1.1. PHONOLOGICAL PHRASE

1.1.1. A Sakao utterance preceded and followed by a pause constitutes a phonological phrase, henceforth in this chapter called phrase.

1.2. INTONATION

1.2.1. Except for the parts affected by expressive or phrase-final intonation, the pitch of a phrase is level.

1.2.2. Expressive intonation may affect any stressed vowel of a phrase, or, in the case of expressive reduplication in verbs, any vowel, even unstressed. It consists in the lengthening of the affected vowel, which is then pronounced crescendo on a higher pitch-level than that of the rest of the phrase. Expressive intonation is noted herein by the triplication of the vowel thus affected, e.g. orru βriiiβ té 'a HUGE pygmy'.

1.2.3. Phrase-final intonation is that of the last syllable or syllables of a phrase. Its pitch is level, but may be lower, or higher than, or level with that of the rest of the phrase.

1.2.4. A phrase-final intonation characterised by a sharp drop in pitch-level denotes the end of a non-interrogative sentence, and is noted herein by a slash, i.e. / .

1.2.5. A phrase-final intonation characterised by a sharp rise in pitch-level denotes the end of an interrogative sentence, and is noted herein by a question-mark, i.e. ? .

1.2.6. A phrase-final intonation with no change in pitch-level from that of the rest of the phrase denotes a sentence-medial suspensive

statement and is noted herein by two raised dots, i.e. " .

1.2.7. A phrase-final intonation characterised by a moderate drop in pitch-level denotes a sentence-medial expectative statement, and is noted herein by a semi-colon, i.e. ; . Such an intonation indicates that more is to follow, the speaker having hitherto but been introducing the elements of his narration.

1.3. STRESS

1.3.1. Primary stress occurs either on the last word-final syllable to occur before the part of the phrase affected by phrase-final intonation, or on the last syllable of the phrase.

1.3.2. Secondary stress occurs on the final syllable of words, unless this final syllable contains the vowel *i*, in which case it occurs on the penultimate. Monosyllabic particles, however, are most often unstressed, except in careful, slow speech.

1.3.3. Stress is realised as loudness and length of the vowel it affects, primary stress being louder than secondary stress.

1.4. PHONEME INVENTORY

1.4.1. Consonants, Vowels and Diphthongs

Sakao has sixteen consonants and semi-consonants, semi-consonants functioning, for all phonological purposes, as consonants, twelve vowels and two diphthongs. Consonant length is phonemic.

CONSONANTS	Bilabials	Prepalatals	Postpalatals
Stops	p [p]	t [t]	k [k]
Fricatives	β [β]	ð [ð]	γ [γ]
Nasals	m [m]	n [n]	ŋ [ŋ]
Semi-consonants	w [w]	j [j]	
Frictionless			h [h]
Sibilant		s [s]	
Flap or roll ¹		r [r]	
Trill		ʀ [ʀ]	
Lateral		l [l]	

¹Depending on speakers.

VOWELS	Front	Front	Central	Back
	unrounded	rounded		rounded
High close	i [i]	y [y]	ɨ [ɨ]	u [u]
Mid close	é [e]	é [ø]		ó [o]
Mid open	e [ɛ]	æ [æ]		o [ɔ]
Low open	a [a]			ɒ [ɒ]

DIPHTHONGS

ao [aɔ̃] and æə [æɛ̃]

NB. The diphthongs are historically derived from the vowels ɒ and æ, which became diphthonguised morpheme-finally except in suffixing and construct morphemes. The phonemic status of at least the diphthong ao is well attested by the loanwords *apaon* 'pound sterling' and *apaos* 'pouch'.

1.4.2. Minimal Pairs

Consonants contrast in the following words:

p	pɔr	[pɔr]	<i>to be near it</i>
t	tɔr	[tɔr]	<i>to stop it</i>
k	kɔr	[kɔr]	<i>that</i>
	ker	[ker]	<i>this</i>
β	βɔrɔp	[βɔrɔp]	<i>he said it</i>
	βer	[βer]	<i>he lies</i>
ð	ðɔr	[ðɔr]	<i>there</i>
	ðer	[ðer]	<i>here</i>
ɣ	ɣer	[ɣer]	<i>to swim</i>
m	mɔr	[mɔr]	<i>that</i>
n	nɔr	[nɔr]	<i>to urinate</i>
ŋ	ŋɔr	[ŋɔr]	<i>to cry</i>
w	wɔr	[wɔr]	<i>that one</i>
j	jɔr	[jɔr]	<i>we (inclusive)</i>
h	hɔr	[hɔr]	<i>to be windy</i>
s	sɔr	[sɔr]	<i>to split it</i>
r	rɔr	[rɔr]	<i>to simmer</i>
	ró	[rɔ]	<i>to stay</i>
R	ró	[rɔ]	<i>to rest</i>
l	lɔs	[lɔs]	<i>to cut it</i>

Consonant length:

p	pé	[pe]	<i>it nips him</i>
pp	ppé	[ppe]	<i>short</i>
t	ti	[ti]	<i>to catch it with a snare</i>
tt	tti	[tti]	<i>to accuse him</i>
k	ke	[ke]	<i>to hold it</i>
kk	kkes	[kkes]	<i>magically powerful</i>
β	βanr	[βanr]	<i>it bears fruit</i>
ββ	ββapr	[ββapr]	<i>it is hairless</i>
γ	γam	[γam]	<i>we (exclusive)</i>
γγ	γγam	[γγam]	<i>to pull it down</i>
ð	ða	[ða]	<i>some</i>
ðð	ðða	[ðða]	<i>pregnant</i>
n	ney	[ney]	<i>my penis</i>
nn	nney	[nney]	<i>for me to drink</i>
w	weð	[weð]	<i>this one</i>
ww	wwe	[wwe]	<i>to ache</i>

Semi-consonants versus vowels:

j	jeð	[jeð]	<i>here</i>
i	ieð	[i'eð]	<i>four</i>
w	wyð	[wyð]	<i>to moisten it</i>
u	uyð	[u'yð]	<i>jungle</i>

Vowels and diphthongs:

i	ni	[ni]	<i>he, she, it</i>
é	né	[ne]	<i>axe</i>
e	ne	[nɛ]	<i>a tree (Bichelamar: nakavika)</i>
a	na	[na]	<i>then</i>
γ	lyð	[lyð]	<i>to go around it</i>
æ	læð	[lɕð]	<i>outside</i>
œ	lœð	[lœð]	<i>to surpass it</i>
u	βup	[βup]	<i>he castrated it</i>
ó	βóp	[βop]	<i>he strangled him</i>
	βóγ	[βoγ]	<i>it is white</i>
o	βoγ	[βoγ]	<i>also</i>
ɔ	βɔγ	[βɔγ]	<i>Mr Owl</i>
i	hi	[hi]	<i>who?</i>
γ	hy	[hy]	<i>to blow on it</i>
u	hu	[hu]	<i>to tilt it</i>
é	né	[ne]	<i>axe</i>
æ	né	[nɕ]	<i>a tree (Bichelamar: naus)</i>

ó	nó	[no]	<i>turtle</i>
e	neð	[neð]	<i>dead</i>
æ	næð	[næð]	<i>thus</i>
o	noð	[noð]	<i>fowl</i>
a	nar	[nar]	<i>fence</i>
ɒ	nɒr	[nɒr]	<i>to urinate</i>
i	hin	[hin]	<i>because</i>
	γitiryp	[γiti ¹ ryp]	<i>he will look at it</i>
y	hyn	[hyn]	<i>pull it!</i>
	γityryp	[γity ¹ ryp]	<i>he might swallow it</i>
æə	mæəsæp	[mæ ¹ sæp]	<i>it cracked</i>
ao	masaop	[ma ¹ saɔp]	<i>he guessed</i>
é	ky-sæp	[¹ ky ¹ sɔp]	<i>steal it!</i>
æ	jil-sæp	[¹ jil ¹ sæp]	<i>kill him!</i>
a	nessar	[nɛ ¹ ssar]	<i>broken</i>
ɒ	mæsɒrp	[mæ ¹ sɒrp]	<i>he split it</i>
o	mosorp	[mɔ ¹ sɒrp]	<i>it barked</i>

i versus zero:

γapilyð	[γapi ¹ lyð]	<i>they quarrel</i>
aplan	[a ¹ plan]	<i>its pith</i>
ælikyγ	[æli ¹ kyγ]	<i>my skin</i>
olkley	[ɔ ¹ klɛγ]	<i>my hand</i>
atasli	[ata ¹ sli]	<i>a kind of grass</i>
esi lét	[ɛsi ¹ let]	<i>worm</i>

1.5. NOTES ON PHONOLOGY

1.5.1. Finer phonetic description of phonemes

1.5.1.1. Stops

Stops are voiceless and unaspirated.

1.5.1.2. Fricatives

Fricatives are voiced.

1.5.1.3. Nasals

Nasals are normally voiced, except phrase-finally or preceding a voiceless phone, in which environments they occur optionally unvoiced, e.g. manarynp [mana¹rynp] 'he took a breath'.

1.5.1.4. *The sibilant s*

The sibilant *s* is a voiceless, lamino-alveolar grooved fricative.

1.5.1.5. *The flap or roll r*

The flap (or roll, depending on speakers) *r* is, again depending on speakers, apico- or lamino-alveolar.

1.5.1.6. *The trill r*

The trill *r* is a voiceless lamino-alveolar fricative trill.

1.5.1.7. *Prepalatals*

The prepalatals *t*, *ð*, and *n* are apico-dental. Intervocally, a short *ð* may optionally be realised as a flap instead of a fricative.

1.5.1.8. *Postpalatals*

The articulation of the postpalatals *k*, *ɣ*, and *ŋ* varies between dorso-palatal (next to a high front vocoid) and radico-uvular (next to a low back vocoid).

Within a word and immediately preceding *r* or *l*, *ɣ* is realised as a stop instead of a fricative, e.g. *eneɣlyl* [ene^lgɣyl] 'afternoon', *βé γria* [βe gri^la] 'when he stood up'. In such environments *ɣ* still contrasts with *k*, e.g. *eneɣlyl* [ene^lgɣyl] 'afternoon' versus *esekleɣ* [ese^lkɣeɣ] 'my nephew'.

1.5.1.9. *Consonant length*

Long consonants are realised by men as a single articulation accompanied by length or tension, or both, and by women and young male children as two successive articulations of the same consonant separated by a very short vowel coloured by the following vowel. Long *r*, however, is realised by all alike as two successive articulations, e.g. *ppé* 'short' is, in men's speech, [ppe], and in women's and young male children's speech [p(e)^lpe]; whereas *rru* 'both' is realised by all as [r(u)^lru].

1.5.1.10. *Stressed vowels*

Under stress, vowels are cardinal, except *y* which is retracted, less rounded, i.e. [y[◌]].

The vowel *i*, when under primary stress, is realised in the same way as *y*, i.e. [y[◌]].

1.5.1.11. *Unstressed vowels*

In unstressed positions, the distinction between vowels becomes much less clearly defined, as they become centralised and as their degree of rounding or unrounding becomes less marked. Furthermore, the distinction *close* versus *open* disappears, so that the contrast between the two series of mid vowels is neutralised. Hence unstressed vowels are close when the vowel of the following syllable is high, and open when it is low, e.g. ehi [e¹hi] 'kingfisher', jeha [jɛ¹ha] 'west', oβu [ɔ¹βu] 'hole', ora [ɔ¹ra] 'sow'.

The vowel *i* is very short, high, central. Its closeness or openness, rounding or unrounding are unspecified and tend to be influenced by the following phones, vocoids influencing it for closeness or openness, and rounding or unrounding, and bilabial contoids for rounding only.

1.5.1.12. *Diphthongs*

Diphthongs are realised as off-glides, and always occur in stressed positions.

1.5.2. Vowel harmony

1.5.2.1. Five *matres vocalium* are required to account for Sakao vowel harmony.

The term *matres vocalium* has been coined here after that of the *matres lectionis* of Hebrew to provide an easy means of accounting for the system of vowel harmony. A *mater vocalium* is a vowel phoneme some distinctive features of which are wholly determined by its phonological environment.

a) The *mater vocalium* \$, unspecified for height, fronting or backing, rounding or unrounding, has but the feature of vocalicity.

b) The *mater vocalium* Y is high, but unspecified for fronting or backing, rounding or unrounding.

c) The *mater vocalium* 0 is rounded, back, but unspecified for height.

d) The *mater vocalium* E is mid, front, but unspecified for rounding or unrounding.

e) The *mater vocalium* I is high, front, but unspecified for rounding or unrounding.

1.5.2.2. In the following tables, C1 represents a short consonant, C2 a long consonant, C1/2 a single consonant, short or long, CC a consonant cluster, C either a single consonant, short or long, or a consonant cluster, and (C) a consonant, short or long, or a consonant cluster, or zero.

1.5.2.3. *Mater vocalium* \$ (rules are ordered)

	ENVIRONMENTS	\$	EXAMPLES
1	--ji	i	\$jil is ijil 'killing'
2	--wu	u	\$wup is uwup 'having castrated it'
3	--Ci		disregard Ci, e.g, treat \$ in \$βiŋan as if it were in the environment --ŋan, which yields aβiŋan 'its branch'
4	--a	a	\$aγ is aaγ 'canoe'
5	--Ca --Cao		
	If C is: a) the partitive infix β		disregard it, e.g. treat \$ in \$βra, the partitive of \$ra, i.e. ara 'pig' as if it were in the environment --ra, which yields aβra 'a bit of pork'.
	b) C1/2	a	\$ssaru is assaru 'language'
	c) bilabial followed by C	æ	\$βlayen is æβlayen 'sorcerer'
	d) CC	e	\$rja is erja 'standing up'
6	--C followed by a front rounded vowel, v or a diphthong	æ	\$ssy is æssy 'hut' \$mɔl is æmɔl 'cycad'
7	--C followed by a front unrounded vowel - if C is:		
	a) bilabial followed by (C)	æ	\$βé is æβé 'drum' \$we is æwe 'rope'
	b) other	e	\$ken is eken 'ornament' \$hi is ehi 'kingfisher'

This table is continued on next page.

ENVIRONMENTS		\$	EXAMPLES
8	--C followed by a back rounded vowel	o	\$só is osó 'pawpaw' \$mmu is ommu 'shadow'

1.5.2.4. *Mater vocalium* Y (rules are ordered)

ENVIRONMENTS		Y	EXAMPLES
1	w--j followed by a front rounded vowel, ɒ or a diphthong	u	wYjéð is wujéð 'to carry it'
2	w--j followed by a front unrounded vowel	i	wYjay is wijay
3	w--j followed by a back rounded vowel		does not occur
4	--j or j--	i	jYne is jine 'to wait'
5	--w or w--	u	wYryð is wuryð 'to bite it'
6	h--C1 followed by a front rounded vowel, ɒ or a diphthong	y	hYhæn is hyhæn 'to creep up to him'
7	h--C1 followed by a front unrounded vowel	i	hYhé is hihé 'to carry it on the head'
8	h--C1 followed by a back rounded vowel		does not occur
9	other	i	pYlið is piilyð 'to quarrel'

1.5.2.5. *Mater vocalium* 0 (rules are ordered)

ENVIRONMENTS		0	EXAMPLES
1	--Cy	o	p0kyl is pokyl 'crooked'
	--Ci	o or u	\$m0sik is omosik or omusik 'music' ¹
	--Cu	o or v ²	r0su is rosu 'to sit' n0ru is n0ru 'to mourn'
2	other	o	\$β0sa is oβosa 'lizard'

Notes:

1. All cases of foreign borrowings, except, maybe, kusijak 'little finger' (k0sYjak?).

2. 0 is v in some morphemes, o in others.

1.5.2.6. *Mater vocalium* E (rules are ordered)

ENVIRONMENTS		E	EXAMPLES
1	--C followed by a front rounded vowel, v or a diphthong	æ	\$mEγæ is æmæγæ 'mist'
			\$γErøn is æγærøn 'its behind'
2	other	e	\$sEkley is esekley 'my nephew'

1.5.2.7. *Mater vocalium* I (rules are ordered)

ENVIRONMENTS		I	EXAMPLES
1	--βj ¹	y	IβJEðin is γβjeðin 'its middle'
2	--C followed by a front rounded vowel, v or a diphthong	y	Isén is ysén a fish species
			IβéI is γβéI 'shark'
			Itjot is ytjot 'thing'

Note 1. This environment is probably generalizable to: -- bilabial followed by C.

This table is continued on next page.

ENVIRONMENTS		I	EXAMPLES
3	other	i	Irey is irey 'my body' Ihó is lhó 'yam' Iβóγ is iβóγ a <i>sprite's name</i>

1.6. INDIVIDUAL VARIATIONS

By individual variations are meant divergences between idiolects. But it may also happen that an idiolect "borrows" from another. The divergence thus borrowed will usually be restricted to one or a few words. Such a divergence is found in Eugène Alyet's treatment of the mater vocalium 0 for which he has ɒ in some morphemes and o in others.

1.6.1. Variations in consonants, vowels and diphthongs

The following individual variations are probably due to the influence of the southern dialect.

1.6.1.1. Stops are aspirated phrase-finally, e.g. mijilp [mi^hjiɪp^h] 'he struck it'.

1.6.1.2. Fricatives are voiceless phrase-finally, or preceding a voiceless phone, e.g. moroy/ [mɔ^hrɔx] 'he heard it'.

1.6.1.3. Phrase-finally, r is followed by a weak echo of the preceding vowel, e.g. makar [ma^akar^a] 'it is red'.

1.6.1.4. The fricative ð is apico-interdental.

NB. The above divergences are regular features of Hog-Harbour.

1.6.1.5. The diphthong œ is replaced by the vowel œ.

Note: There are no diphthongs in Hog-Harbour.

1.6.1.6. The vowel i representing the mater vocalium I is replaced by u or y in a few words. This seems to be an influence of Lowérié or Hog-Harbour, e.g. ijar 'garden' is nujar in Lowérié and nyjar in Hog-Harbour.

1.6.1.7. Word-medially, the following vowels are lost:

a) a vowel representing the mater vocalium \$.

b) a in environment --C followed by a, e.g. nhaɪhaɪ for nahaihaɪ 'light'.

c) a vowel representing the mater vocalium E in environment --C followed by e, é, æ, or é, e.g. æβræn 'its nest' for æβæræn.

d) the vowel o representing the mater vocalium O in environment --C followed by o or ó. NB. These seem to be influences of Lowérié, e.g. ara (\$ra) 'pig' is nara in Hog-Harbour, and nra in Lowérié; ađalan (\$đalan) 'cloud' is nađalan freely alternating with neđlan in Hog-Harbour and is nđlan in Lowérié.

The following divergences are not likely to be due to influences of the southern dialect.

1.6.1.8. The fricative γ becomes a stop phrase-finally or word-finally following a front, non-low vowel, e.g. ðeneγ 'my father' is [ðɛ'nɛg], roγ/ 'listen' is [rɔg].

1.6.1.9. The vowels é, é and ó, and, but much more rarely, γ and e, are diphthongised as respectively [eɪ], [øɪ], [oo], [γɪ] and [ɛe] when final of a morpheme other than a construct or suffixing one, e.g. né 'axe' is [neɪ] instead of [ne], nó 'turtle' is [noo] instead of [no].

1.6.1.10. The trill ʀ is replaced by r. This is a feature of so many idiolects that ʀ will probably have disappeared in Sakao as a phoneme distinct from r within a decade or so. The trill ʀ has already been replaced by r everywhere word-finally, where it is still attested in Hog-Harbour, e.g. jɔʀ 'we (inclusive)' is jéʀ in Hog-Harbour. An intermediary form jéʀ is found in the northern subdialect of Lotoror.

1.6.1.11. Both ʀ and r are realised as voiced trills. This is probably an overcompensation for the tendency to replace r by ʀ, and is a divergence found in idiolects showing mainly influences from Hog-Harbour and Lowérié.

1.6.2. Variations in vowel harmony

1.6.2.1. The mater vocalium \$ shows the widest range of variations, varying from being a central fronted vowel, low or mid depending on speakers, unspecified for rounding or unrounding, but otherwise unaffected by its environment (and therefore notable by a, e or æ), to \$ totally assimilating to the following vowel, e.g. æβðγγ (\$βðγγ) 'my head' may be heard aβðγγ or γβðγγ.

1.6.2.2. The mater vocalium O varies between ɒ and o in environments --C_γ or --C_u. This divergence is extremely common, and very few speakers indeed will have the same vowel in either of these environments; most

will have *ɒ* in some words, *o* in others, but few will have *ɒ* and *o* freely alternating.

1.6.2.3. The mater vocalium *i* is only sometimes heard as *i* instead of *y*, e.g. γβέλ 'shark' (Iβέλ) is but rarely heard as iβέλ.

1.7. MORPHOPHONOLOGICAL ALTERATIONS

1.7.1. Morphophonological changes occur within phrases, some obligatorily, some optionally, and involve in all cases but one the loss of a phoneme.

1.7.2. In the following tables, *V* denotes a vowel, *C* a consonant, member or not of a cluster, *SC* stands for *same consonant*, *SV* for *same vowel*, and *HS* for *homorganic stop*.

1.7.3. The following morphophonological changes are obligatory:

Within the phrase (rules ordered)

The segment		in environment	becomes	EXAMPLES
1	Vh	--C	VhSV	mōaha mam 'this shore' for mōah mam
2	C	--SC	lost	kam malam 'this person came' as ka malam
3	β	--p or p--	lost	jaβwarp βoy 'don't even speak' as jaβwarp oy

Within a word, or a close-knit string of words (shown herein by intervening hyphens or raised dots (see 00.6B.)

The segment	in environment	becomes	EXAMPLES
r	--n	lost	okur-næð 'shell of a coconut' as oku-næð

1.7.4. The following morphophonological changes are optional and apply after the obligatory changes have taken place.

<i>Probability</i>	<i>Lost segment</i>	<i>In environment</i>	EXAMPLES
almost always	j	i--	iar for ijar 'garden'
very often	j	--i	ailp for ajilp 'I'll kill him'
often ¹	j	--e or --é	eekar for ejekar 'crab'
sometimes ¹	j	--a	aa for aja 'what?'
almost always	w	u--	uyð for uwyð 'jungle'
very often	w	--u	aup for awup 'I'll castrate it'
often ¹	w	--o or --ó	aos for awos 'I'll dream'
very seldom ¹	w	--p	æp -ao for æwp -ao 'rat's tail'
very often	i	C--SC	ttót for titót 'let's cut it'
sometimes	i	C--	æsnœγ for æs nœγ 'my mouth'
often	h	phrase- medially	mæγæðeri for mæγæðheri 'he knows it'
sometimes	ð or γ	--HS	sænpot for sænpðt 'cut it off'
very often	r	--jr	jér jrép 'they all' as jé jrép

Note 1. And only word-medially.

NB. When w or j is lost following a consonant, the following vowel becomes slightly lengthened, which will be shown herein by an apostrophe, e.g. γ'óp ni for γwóp ni 'let her hang herself'.

The above optional rules are not ordered relatively to one another, so that several of them may apply recurrently to the same segment or segments, e.g. βé kep for βé γkep for βé γikep 'when he took it'.

1.8. WORD STRUCTURES

Here follow some observations on the structure of Sakao words. They apply only to uninflected, non-compound words bare of suffixes.

1.8.1. Excepting those cases when a consonant has been lost due to the application of one of the optional morphophonological changes above, a vowel cannot be immediately followed by another vowel. The only exceptions to this rule are represented by nouns with an initial sequence aa (\$a), which can however be traced back to an older sequence awa (\$wa), e.g. aay 'canoe', which is nway in Hog-Harbour, comes from an older form away, still attested by its allomorph way in læɔr-way 'on (top of) a canoe', i.e. 'by canoe'.

1.8.2. Initially of a polysyllabic word, one finds only the vowels and matres vocalium a, o, u, I and \$, e.g. aðði 'moon', ora 'sow', ula 'palm-tree', isa (Isa) 'friend', ara (\$ra) 'pig'.

1.8.3. Medially of a polysyllabic word, one finds the vowel and matres vocalium a, E, 0 and Y, e.g. alawa (\$lawa) 'mud', ejenal (\$jEnal) 'hawk', oβosa (\$β0sa) 'lizard', siŋer (sYŋer) 'to be bright'.

1.8.4. Word-finally, one finds the following vowels and diphthongs.

If that word
is:

construct	a	e	é	æ	é	ɐ	o	ó	i	y ¹	u ¹
suffixing:											
a) lower allomorph	a			æ		ɐ		o			
b) other		e	é	æ		é		o	ó	i	y ¹
other	a	e	é	æə	é	ao	o	ó	i	y ¹	u ¹

Note 1. Does not occur following j.

Note the complementary distribution of the diphthongs æə and ao and the vowels æ and ɐ.

1.8.5. In a closed final syllable, one finds the vowels:

a e é æ é ɐ o ó y¹

Note the absence of diphthongs and of the high vowels i and u.

¹i following j, e.g. jil 'to strike it', jir 'to twist it'. See 1.8.4., Note 1.

1.8.6. Word-initially and intervocalically, one finds single consonants, short or long, and clusters of two consonants, e.g. hirké 'to carry him on one's shoulders', ssaru 'to speak', rle 'to send him on an errand', ađđi 'moon'.

1.8.7. Word-finally, one finds single short consonants and clusters of two consonants, e.g. he 'to live', heð 'bad', hert 'to sing', eđenm 'devil'.

1.8.8. Semi-consonants and the trill ʀ do not occur word-finally.

1.8.9. The trill ʀ and j and h never occur long.

1.8.10. Simple reduplication

A simple reduplication is a CVC segment doubled (C representing a short consonant, the second one different from the first one). A great many words are composed of or contain a simple reduplication, e.g. karkar 'clean', ækørkør 'hermit crab', nahalhal 'light', harþorþor 'cowardly', nokonkon 'round', aʏarʏar 'swallow', eherher 'blow-pipe', æhynhyn 'hillock', keðkeð 'afraid', anatnat 'hornet'.

The two rules hereunder (paragraphs 1.8.11. and 1.8.12.) do not apply in simple reduplications.

1.8.11. Homorganic stops, fricatives and/or nasals do not occur contiguously.

1.8.12. If one calls *homothesis* the vowel a when the following syllable contains a, or the vowel o when the following syllable contains o, ó, u or ʏ, or the vowel u when the following syllable contains u or ʏ, or the mater vocalium E when the following syllable contains e, é, æ, é, æ, ao or E, or the mater vocalium I when the following syllable contains i, y or ʏ, or the mater vocalium O when the following syllable contains o, ó or O, or the mater vocalium ʏ in all environments, i.e. as per table on the following page, then, homotheses do not occur word-initially nor between two homorganic stops, fricatives and/or nasals. *There are but a few exceptions to this rule, the most common being the suffixing noun ðana- 'father'.*

The vowel or mater vocalium	is a homothesis if the following syllable contains:
a	a
o	o, ó, u or Y
u	u or Y
E	e, é, æ, é, æə, ao or E
I	i, y or Y
O	o, ó or 0
Y	any vowel or mater vocalium

1.8.13. Finally, homotheses never occur between two identical consonants.

1.9. LIAISON

An n occurs sporadically, following a vowel and preceding a noun starting with \$ or a verbal string or a verb in the first person singular, e.g. tim'aβiljal-perer ol ye næpæs yamsor '*they had not been walking for long and (i.e. when) the dogs barked*'; jæn βa najan '*I shall go*'.

This n is a surviving evidence of a lost consonant still attested in Hog-Harbour, e.g. to Sakao noun-initial \$ corresponds in Hog-Harbour an initial n or n\$, and, in Hog-Harbour, the verbal personal prefixes are, for the singular:

	1st person	2nd person	3rd person
<i>Irrealis</i>	naγ	nιγ	γι
<i>Realis</i>	nam	nιm	m

Compare with the Sakao prefixes p. 9.

CHAPTER 2: MORPHOLOGY

2.1. NUMBER

2.1.0. Sakao has four numbers: singular, dual, trial and plural. The trial is in fact a limited plural referring to numbers from three to about ten.

2.1.1. Only personal pronouns and personal pronominal suffixes, however, are specified for all four numbers. Some morphemes are inflectable for the plural only (e.g. nominal demonstratives), some are inherently specified for one number only (e.g. personal demonstrative pronouns, inherently singular; the free noun *rru* 'two persons', inherently dual; the free noun *rki* 'people', inherently trial). Many morphemes are unspecified and uninflectable for number, but may become specified, most often at least partially, by an expansion (e.g. a numeral or a determining morpheme itself specified for number). Many morphemes, finally, are uninflectable for number (e.g. verbs, modal particles).

2.1.2. The following table (on next page) sums up and details the general remarks contained in the preceding paragraph.

EXAMPLES:

1. Uninflectable morpheme: *ara* 'pig' or 'pigs'; determined by an uninflected nominal demonstrative: *ara mam* 'this pig'; by an inflected nominal demonstrative: *ara mamir* 'these pigs'; by an uninflected nominal demonstrative and a numeral: *ara mam ieð* 'these four pigs'.

2. Inflectable morpheme: *aðén* 'relative'; when uninflected: *aðén* 'relative' (sg.); when uninflected and determined by an uninflected nominal demonstrative: *aðén mam* 'this relative'; and by a numeral: *aðén mam ðæl* 'these three relatives'; when inflected: *raðén* 'relatives', and determined by an inflected nominal demonstrative: *raðén mamir* 'these relatives'.

3. Inherently trial morpheme: rki 'people', determined by an uninflected nominal demonstrative: rki mam 'these people', and by a numeral: rki mam ieð 'these four people'.

MORPHEME		determined by a phrase expansion consisting of:			
		nominal demonst.		a numeral and, optionally, a nominal demonstrative uninflected for plural	other
		uninfl.	infl.		
uninflectable for the plural		singular	plural	as specified by numeral	unspecified
inflectable for plural	uninflected	singular		as specified by numeral	singular
	inflected		plural		plural
inherently singular		singular			singular
inherently dual		dual		cf. Note 1	dual
inherently trial		limited plural		as specified by numeral	limited plural

Note 1. The inherently dual noun rru 'two persons' may be determined by the numeral ru 'two', e.g. rru ðm or rru ðm ru 'those two people'.

Abbreviations: infl. = inflected for plural; uninfl. = uninflected for plural.

2.2. PARTITIVE

Class I nouns other than those starting with \$β or \$p, nominalised adjectives and nominalised adjectivoids are inflectable for the partitive, unless they are regimes, in which case they remain uninflected, e.g. aβra 'a bit of pork' from ara 'pig'; oβoneð 'a bit of meat' from oneð 'meat'; oβró 'some water' from oró 'water'.

Nouns and nominalised adjectives and adjectivoids inflected for the partitive are further inflectable for the irrealis by prefixing t, e.g. taβra 'a bit of pork' (irrealis); toβró 'some water' (irrealis).

2.3. IRREALIS

2.3.1. Partitives and, unless they are regimes, class I and II nouns, nominalised adjectives and adjectivoids, and numerals other than the definite and the interrogative ones are inflectable for the irrealis.

2.3.2. Meaning

The existence of the referent of a word in the irrealis is either

doubted, or negated, or regarded as a mere prospect, e.g. per maaβγæðheri wé timhá tetté 'the padre did not know whether they had run away from SOMETHING'; jetar mærcæmp βé" aræsp taðæŋæŋ ité 'God thought [and] said: "I will make A MAN"'; wé mnarao" symp tæncæð ité 'if you are thirsty, drink A COCONUT'; ayænp na taja ité? 'WHAT shall I eat now?'; i" ðenem ité meré 'you, you don't have A father¹'; jép æme" akep tara ité hæm 'make the sun shine, and I'll give you A PIG'; topel ité γiré 'let it not be ANOTHER ONE'; aker tosoltja ðlru tihein 'I'll put two soldiers to guard it'; mætrp taðæŋæŋ ité meré aja 'he met with A MAN or something [else]'; tetté βa meré llpð 'there wasn't ANYTHING yet on the earth'.

2.4. DEMONSTRATIVES

2.4.0. Sakao has a wealth of demonstrative words, as can be seen from the table below.

DEMONSTRATIVE WORDS

		pronouns							adject.
		nominal	deic	clsl	locative	general	persn.	retro.	
present	immediate	mam(ir)	non	nnon	ðað(ir)	wa(rir)	kamam		ðamam
	mediate	om(ir)	ni	nni	ðom(ir)	wom(ir)	kam		ðom
	remote	nóm(ir)	njó	nnjó	ðóð(ir)	ó(rir)	kamóm		ðomóm
non-present	immediate	með(ir)	næð	nnæð	jeð(ir)	weð(ir)	kameð	okomeð	ðemeð
	mediate or ker(ir)	mer(ir) or ker(ir)	nær	nnær	ðer(ir)	wer(ir)	kaker	okomer	ðemer
	remote or kpr(ir)	mør(ir) or kpr(ir)	nør	nnør	ðør(ir)	wør(ir)	kakør	okomør	ðæmør
tacit		krym(ir)	neri	nneri	ðeri(rir)	weri(rir)	kakrym	ukkrym	ðemeri
interrogative		me or mé			je				ðemé or ðé

Abbreviations: deic = deictic, clsl = clausal, persn. = personal, retro. = retroactive, adject. = adjective.

¹ ðana- 'father' belongs to a class of nouns which is not inflectable for the irrealis.

2.4.1. The terms *immediate*, *mediate* and *remote* have been chosen for series of demonstratives rather than other terms such as *close*, *near*, *far*, as they convey better the Sakao meanings which are not necessarily spatial, e.g. you notice a boat in the distance and ask your interlocutor: aay móm ton hi njó? 'THAT boat, maybe who THERE?', i.e. 'who could that be in that boat?' using remote demonstratives. He, on the other hand, might answer: æhæn" am'aβγæðheri aay nm mβɔrp 'no, I don't see THAT boat you said' using a mediate demonstrative, or: hao" aay mam amyæðheri 'yes, I know THIS boat' using the immediate demonstrative.

2.4.2. Present demonstratives refer to present states of affairs, non-present demonstratives to non-present states of affairs, i.e. future or past, e.g. a man left a fish on a stone; when he comes back to fetch it, instead of his fish, he finds a young girl sitting on that stone. He tells her: Jæn amkæl enes kité apitjæ-rsa ðer læsymt-ejeð ker/ 'I'm looking for a fish I left HERE on top of THIS stone', using non-present demonstratives. Or, you ask your informant: "What do you call this?" pointing to a rafter of the nakamal and using the present immediate demonstrative: wa tiβɔrin aja? 'THIS is called what?'; he then touches the rafter, wanting to make sure that it is indeed the one you meant, and asks back: wer? 'THIS ONE?' using the non-present, mediate demonstrative.

2.4.3. Tacit demonstratives refer to unexpressed or previously agreed upon things, e.g. myæð kakrym? 'did you see THE PERSON IN QUESTION?', joró tippe ðeri 'let's meet AT THE APPOINTED PLACE', læβɣ-eren krym 'on the day AGREED UPON'.

2.4.4. Interrogative demonstratives elicit information, e.g. mryrp je? 'WHERE do you come from?', mðé non? 'WHAT have you been DOing now?', wari mam rær milró ton je non? 'WHERE could this husband [of mine] be?'

2.4.5. Nominal demonstratives and locative and general demonstrative pronouns other than the interrogative ones are inflectable for the plural (inflection shown in brackets in the table on previous page) by suffixing *ir* following a consonant, *rir* following a vowel, e.g. ara mam 'this pig', ara mamir 'these pigs', ðað 'here', ðaðir 'at these places', wa 'this one', warir 'these'. General demonstrative pronouns may be determined by a phrase expansion consisting of a numeral other than *té* 'a, one' (indefinite), *kité* 'a, one' (definite), *ða* 'some, several' (indefinite), *kiða* 'some, several' (definite) and *ðé* 'how many?'

2.4.6. Personal and retroactive pronouns are inherently singular, e.g. kamam 'this person'.

2.4.7. Other demonstratives are unspecified and uninflectable for number.

2.4.8. Nominal demonstratives correspond to the demonstrative adjectives of English, e.g. ara mam mam 'THIS pig'.

2.4.9. Demonstrative deictics correspond to locative demonstratives as used colloquially in English, e.g. ara mam non 'this HERE pig'.

2.4.10. Clausal demonstratives are unsupplementable and constitute sub-themes or predicates on their own, e.g. nnjó βa 'still THAT ONE', i.e. 'there is still one left'; nnon non jæn '[as for] THIS ONE here, [it was] me'.

2.4.11. Locative demonstrative pronouns refer to a place or, when inflected for the plural, places, e.g. ððð 'there', ðððir 'at those places, around there'.

2.4.12. General demonstrative pronouns refer to things, concrete or abstract, or to animals or persons, e.g. timhyp wa 'they shot HIM'; wa eyeni 'THIS [is] a tree' or 'THIS [is] wood'; wa ton meye je? 'THIS maybe goes where?', i.e. 'what could be the reason for this custom?'

2.4.13. Personal demonstrative pronouns refer to persons, e.g. kamam βé yitari 'when THIS PERSON went in'.

2.4.14. Retroactive demonstrative pronouns refer to concrete things, or to animals or persons just noticed by the speaker, e.g. a man finds an infant abandoned by a stream and says: jæn βa najan awwein okomer 'I shall go and feed THIS ONE'. Or, walking ahead on the path, the guide turns to you, pointing to a tree, and says: jaβwysp okomer'' oyolað 'don't touch THIS ONE, it's a nangalat'.

2.4.15. Demonstrative adjectives express manner, e.g. wør mæðæmør 'that is LIKE THAT', mðé? 'WHAT are you DOing?', eteðemeð 'SUCH a thing'.

2.5. NUMERALS

2.5.1. Numerals are:

té	'a, one' (indefinite)	ieð	'four'
kité	'a, one' (definite)	lén	'five'
ða	'some' (indefinite)	lén·ara	'six'
kiða	'some' (definite)	lén·ere·ru	'seven'
ðé	'how many?'	lén·ere·tæl	'eight'
ru	'two'	lén·ere·peð	'nine'
ðæl	'three'		

NOTE. Numbers above *ten* are expressed by numeral verbs.

2.5.2. The difference of meaning between definite and indefinite numerals is apparent from the following example: having asked for directions to go to a village, you are told: hoþr vl ahal" wé mγæð ænæð kité haþyl 'just follow the road, when you see a (definite) coconut-tree, go west'.

2.5.3. Numerals other than kité, ða, kiða and ðé may be inflected for the distributive provided that they are not regimes, by prefixing taal (probably from té vl 'just one'), e.g. γamky ayt-esilen taalieð 'they give EACH four one-shilling coins'.

2.5.4. Numerals other than the definite ones, and which are not distributive nor regimes may be inflected for the irrealis, té and ða prefixing i, ieð prefixing ð and others prefixing ði, e.g. ité 'one', ðiru 'two', ðieð 'four'.

2.6. SUFFIXING MORPHEMES

2.6.1. Suffixing morphemes comprise suffixing nouns, prepositions and pronouns, and all end with a vowel.

2.6.2. Vowel alternance occurs in many suffixing morphemes, an allomorph differing by its final vowel being used with the third person singular and first person plural inclusive pronominal suffixes. These suffixes are historically derived from suffixes containing a low vowel, as attested by Tolomako and Akei:

Tolomako	Akei	Sakao	
na nataku	na mataku	mðey	my eyes
na natana	na matana	mðan	his eyes
na natatsa	na mataka	mðar	our eyes

These two suffixes are therefore called *low*, and the allomorphs they require *lower*.

Vowel alternance occurs as shown in the following table:

Final vowel of lower allomorph	Final vowel (other)	EXAMPLES
a	e	mðey <i>my eyes</i> mðan <i>his eyes</i>
ɒ	æ	æðæy <i>my faeces</i> æðɒn <i>his faeces</i>
o	æ	ærlæy <i>my throat</i> orlon <i>his throat</i>
æ	y	æryy <i>my teeth</i> æraen <i>his teeth</i>

Except in the case of a few suffixing morphemes ending with *o*, which do not show vowel alternance, all suffixing morphemes which end with *a*, *ɒ*, *o* or *æ* preceding a low suffix show vowel alternance. For this reason, when such a morpheme is given without its regime, only the lower allomorph is provided, e.g. æræ- '*teeth*'.

In a few suffixing morphemes, vowel alternance extends to the penultimate syllable, e.g. ðeney '*my father*', ðanan '*his father*', likyy '*near me*', lækæn '*near him*'.

2.7. CONSTRUCT MORPHEMES

2.7.1. Construct morphemes comprise construct nouns, prepositions and pronouns, and most of them end with a consonant, e.g. ark= '*trunk*', nêl= '*hair, feathers of*', æβyð= '*head of*', asask= '*flesh of*'. Those which end with a vowel are identical with the corresponding suffixing morphemes, e.g. ænæ= '*tongue*', suffixing: ænɒ-; aro= '*face*', suffixing: aro- (no vowel alternance).

2.8. NOUNS

2.8.0. Nouns fall into three classes as regards their inflections.

2.8.1. Class I nouns are inflected for the irrealis and the partitive, class II nouns for the irrealis only, and class III nouns which are kinship terms are inflected for the plural. The class III nouns rru

'two persons' and rki 'people' are respectively inherently dual and trial.

2.8.2. Class I nouns are divided into three subclasses:

a) Class Ia contains nouns other than kinship terms, starting, when uninflected, with the mater vocalium \$, e.g. ara 'pig', oró 'water', æβlayen 'sorcerer', ehi 'kingfisher'.

b) Class Ib contains nouns other than kinship terms, starting, when uninflected, with a vowel or mater vocalium other than \$, e.g. iðei 'banana', ulæ- 'hair, feathers', ulæh 'maggot', ora 'sow', aro- 'face', ark= 'trunk'.

c) Class Ic contains nouns other than kinship terms, which, when uninflected, start with n, e.g. non 'sand', noð 'fowl', né 'axe', nér·kar 'sacred stones'¹.

2.8.3. Class II contains four nouns which, when uninflected, start with mð, i.e. mða- 'eye', mðe 'a kind of haunting sprite', mðah 'shore', mðoβ 'a kind of breadfruit'.

2.8.4. Class III contains kinship terms and a few nouns referring to persons, all starting with a consonant other than n or a cluster other than mð, e.g. mana- '(man's) brother', utie- '(woman's) sister', kət 'boy', k& 'girl', rki 'people'.

2.8.5. Inflection for the partitive

a) Class Ia nouns infix β between their initial mater vocalium \$ and the following phoneme, nouns in aa (\$a) then recovering their historically lost w, e.g. ara 'pig', partitive: aβra 'a bit of pork'; aay 'canoe', partitive: aβway 'part of a canoe, one side of a canoe'.

b) Class Ib nouns prefix \$β, e.g. irey 'my body', partitive: æβirey 'part of my body, one side of my body'; ulyy 'my hair', partitive: oβulyy 'part of my hair, one of my hairs'.

c) Class Ic nouns replace their initial n for \$β, e.g. naβ 'firewood', partitive: aβaβ 'some firewood, part of a heap of firewood'.

2.8.6. Inflection for the irrealis

¹cf. Deacon (1929:467): 'in one hand he carries a club, in the other a basket of sacred stones (thongiurkar)', i.e. aðan-ér·kar 'nér·kar-basket'.

a) Class Ia and Ib nouns prefix *t*, e.g. *ara* 'pig', irrealis: *tara*; *ora* 'sow', irrealis: *tora*.

b) Class Ic nouns replace their initial *n* for *t*, e.g. *né* 'axe', irrealis: *té*; *noð* 'fowl', irrealis: *toð*.

c) Class II nouns prefix *ti*, e.g. *mðoβ* 'breadfruit', irrealis: *timðoβ*.

2.8.7. Inflection for the plural

a) Kinship terms starting with *wa* lose their initial *w* and prefix *ra*, e.g. *wakær* 'wife', plural: *raakær*

b) Kinship terms starting with a consonant prefix *ri*, e.g. *meneγ* 'my brother', plural: *rimeneγ* 'my brothers'.

c) Kinship terms starting with a vowel prefix *r*, e.g. *utiem* 'your sister', plural: *rutiem* 'your sisters'.

2.8.8. Inflection for regime

Some class Ic nouns are inflected, some optionally, some obligatorily, for regime, by replacing their initial *n* for *Ij*, e.g. *ne-* 'penis' is obligatorily inflected for regime, thus becoming *ije-*, e.g. *oró-je-* 'sperm' (literally: 'water of penis'; for the loss of initial *i* cf. p. 37); *non* 'sand', is optionally inflected for regime, e.g. *lon* or *lion* 'in the sand', where it is regime of the construct preposition *l=* 'in, at, on'.

When regime, the suffixing noun *æβðæ-* 'head' takes the form *βæðæ-βiðγ-*, e.g. *lohu-βæðæn* 'in the space above his head', *lohu-βiðγγ* 'in the space above my head'.

2.8.9. Loss of initial \$, n or I

Nouns lose their initial \$, *n* or *I* in the following environments (see table, next page):

<i>I</i> ₆ <i>the noun is</i>	<i>š</i> <i>is lost</i>	<i>n</i> <i>is lost</i>	<i>I</i> <i>is lost</i>
non-initial member of a compound noun	almost ₁ always ₁	always	almost ₁ always ₁
included object	always	always	almost ₁ always ₁
regime of a construct preposition or pronoun			
a) ending with a vowel	always	always	almost ₁ always ₁
b) ending with a consonant	never	always	never
regime of a construct noun			
a) ending with a vowel	always	always	almost ₁ always ₁
b) ending with a consonant	often ²	always	almost ₁ always ₁
regime of the interrogative pronoun <i>hi</i> 'which?'	always	never if open monosyllabic word, otherwise, always ³	always

Notes:

1. The few cases when the initial was retained seem to alternate freely with those when it was lost.
2. No fast rule could be found. The initial tends to be retained when its loss would result in a sequence of three or more consonants or a sequence of two homorganic stops, fricatives and/or nasals. But exceptions are numerous and seemingly unpredictable.
3. For example, *hi éö* 'which star?' from *néö* 'star'; but *hi né* 'which axe?' from *né* 'axe'.

2.8.10. Nouns are further dividable into two great categories: bound and free, the former comprising suffixing, construct and enclitic nouns.

2.8.11. The enclitic noun *štE*

There is only one enclitic noun, *štE* 'thing' which is prefixed to its expansions. Its allomorphs are given in the table overleaf:

when preceding:	\$tE is:	EXAMPLES
té kité kkri tiβle	fused	etté 'something' etikté 'a certain thing' ettikri 'small things' ettiβle 'ordinary thing'
móm(ir)	\$t0	otomóm 'that thing'
a vowel	\$t	ætɔm 'that thing'
a morpheme the 1st syllable of which (disregarding a syllable containing i) contains a	\$ta	atamam 'this thing' atakiða 'certain things'
elsewhere	\$tE	eteheð 'bad things'

Note the idiomatic meaning of \$tEhɔ- as 'garden', e.g. ætæhœy 'my garden'.

2.8.12. Noun formation

Nouns are formed by derivation or/and composition.

A) By derivation:

a) Names of tools are formed by prefixing \$ to verb stems the first syllable of which contains a (disregarding a syllable containing i), and by prefixing a to other verb stems, e.g. aujéð 'pole for carrying loads', from wujéð 'to carry it on a pole'; ayei 'digging stick' from yei 'to dig'. In some names of tools of older formation, a change of vowel has occurred in the verb stem, e.g. aras 'a kind of weapon', from rɔs 'to hit it with a missile', ajéi 'pestle' from jil 'to strike it'. The nouns asjer 'messenger, servant', ahor 'catamite'¹, aljé 'lineage' are almost certainly formed in the same way from sjer 'to send him', hor 'a verb expressing the reaching of sexual maturity in males', and ljé 'to spit it, to lay [an egg]'.

b) Abstract nouns are formed by prefixing \$ to verb stems, e.g. æjém 'work' from jém 'to work', ejerkeð 'obscene language' from jerkeð 'to swear'. Note the extraordinary formation of elhe-tor 'eternal life'

¹Oliveau (1911:338): "La pédérastie existe et aboutit dans l'île d'Espiritu Santo à la formation d'un ménage bizarre composé du mari, de la femme et d'un jeune Canaque qui a droit aux faveurs de la femme."

from *he 'to live'*, the adverb *tor 'always'* and the perdurative prefix *l*.

B) By composition:

a) A free noun is followed by another noun which determines it, e.g. *olom-akat 'car-house'*, e.g. *'garage'*.

b) A construct noun is amalgamated to its regime and, owing to the loss of the word-boundary, its final syllable becomes unstressed, unstressed *ɒ* becoming *a*, e.g. *anaðhal 'door'* from *ænð-hal 'opening of the road'*.

c) A free noun or a construct noun is followed by a verb which determines it, e.g. *enes-hol 'animal-fly'*, i.e. *'bird'*; *oró-γer 'water-flow'*, i.e. *'stream, river'*; *nél-sys 'feather-peel'*, i.e. *'falling star'*.

C) By the above processes combined:

For example, *aró-tin 'can-opener'* from *ró 'to open it'* and *etin 'can, tin'*; *ason-γor-ulé- 'shoes'* from *son 'to slip it [on]'*, *γor 'to conceal it, to block it'*, and *ulé- 'feet'*; *nar-sæη-pere 'long-beaked nar'* from *nar 'a fish species'*, *ææη= 'mouth, beak'* and *pere 'long'*.

As regards their category (free, suffixing, construct or enclitic) derived nouns are free, and compound nouns belong to the same category as their last component if it is a noun, and are free if their last component is a verb.

2.9. PRONOUNS

There are thirteen classes of pronouns:

1. Clausal demonstrative pronouns
2. Locative demonstrative pronouns
3. General demonstrative pronouns
4. Personal demonstrative pronouns
5. Retroactive demonstrative pronouns
6. Locative pronouns
7. Proper pronouns
8. The interrogative pronoun *hi 'who, which?'*
9. Locative proper pronouns
10. Iterative pronouns
11. Possessive pronouns
12. Ordinal pronouns
13. Personal pronouns.

2.9.1. Demonstrative pronouns have been treated in 2.4.

2.9.2. Locative pronouns are:

jel	<i>north</i>
ys	<i>south</i>
jeha	<i>west</i>
jehu	<i>east</i>
tyl	<i>above</i>
jeðan	<i>below</i>
jer	<i>right</i>
jenar	<i>left</i>
jettær	<i>far</i>
jeðe	<i>in the end</i>
manó	<i>today</i>
manpór	<i>yesterday</i>
mantælaŋ	<i>the other day</i>
lakren	<i>tomorrow</i>
onaŋ	<i>the day after tomorrow</i>
wætæn	<i>three days hence</i>
hinjer	<i>soon, or recently (less than a day away)</i>
hinjóm	<i>soon, or recently (less than a generation away)</i>
mæraŋ	<i>before, long ago</i>
matjer	<i>in the remote past</i>
laŋ	<i>when? (in the future)</i>
malaŋ	<i>when? (in the past)</i>

Note. The first six pronouns of the above list may function as supplements, in which case they take respectively the forms *mel*, *mys*, *maha*, *mohu*, *mityl* and *mæðan*.

2.9.3. Proper pronouns are proper names such as *alŷet*, *sæk*, *hallyŋ* (men's names), *kæ-βriβ*, *armæhær* (women's names). They are usually derived from or composed of verb and/or noun stems, class Ia nouns often losing their initial *ʃ*, e.g. *sæk* from *æsæk* 'mosquito', *βvy* from *æβvy* 'owl', *nao* 'rat', *ejeð* 'stone'; *tælpys* from *tæl* 'to tread it' and *pys* 'extinguished', i.e. 'he who puts out a fire by treading on it'.

2.9.4. The interrogative pronoun *hi*, e.g. *hi ŷitalmæraŋ?* 'who will go first?'. See also 3.3.3.5.

2.9.5. Locative proper pronouns are place-names, e.g. *kanal* 'Luganville', *jækkyl* 'Yakoul'.

2.9.6. Iterative pronouns are derived from numerals by the prefixation of *ða* 'time', e.g. *ðaru* 'twice', *ðaieð* 'four times'.

2.9.7. There are three possessive pronouns, which are derived from the benefactive/possessive prepositions. They are:

a) *menne-*, *menne=* which refers to potables, e.g. *menney* 'mine [water or coconut etc. for drinking]'

b) *mana-*, *mene=* which refers to edibles. It is not subject to vowel alternance and, with the 1st person singular pronominal suffix for regime, takes the form *miniŋ* instead of *manay*, e.g. *manan* 'his [something to eat]', *mene-ra* 'the pigs' [food]'

c) *mæhp-*, *mæhæ=* which refers to other possessions, e.g. *mæhæy njó* 'that's mine', *mæhæ-ryr* 'white men's'. See also 3.3.3.1.

2.9.8. Ordinal pronouns are:

<i>tu</i>	<i>the second one</i>
<i>tæI</i>	<i>the third one</i>
<i>iet</i>	<i>the fourth one</i>
<i>kæIæŋ</i>	<i>the fifth one</i>
<i>kora</i>	<i>the sixth one</i>
<i>koru</i>	<i>the seventh one</i>
<i>retæI</i>	<i>the eighth one</i>
<i>repeð</i>	<i>the ninth one</i>
<i>sayyI</i>	<i>the tenth one.</i>

For example, *βé yitép kora* 'when it reaches the sixth [day]', *hyr ðóð njó kora miIró Iæŋ* 'for there the sixth [guard] stays in it'.

2.9.9. Personal pronouns are:

	<i>Singular</i>	<i>Plural</i>	<i>Dual</i>	<i>Trial</i>
1st pers.incl.		<i>jɔr</i>	<i>joró</i>	<i>jɔr·ðæI</i>
1st pers.excl.	<i>jæŋ</i>	<i>ɣam</i>	<i>ɣamru</i>	<i>ɣamðæI</i>
2nd pers.	<i>i</i>	<i>ɣé</i>	<i>ɣiru</i>	<i>ɣðæI</i>
3rd pers.	<i>ni</i>	<i>jæŋ</i>	<i>joru</i>	<i>jæŋ·ðæI</i>

2.10. PRONOMINAL SUFFIXES

There is a one-to-one correspondence between personal pronouns and personal pronominal suffixes (see table overleaf):

	<i>Singular</i>	<i>Plural</i>	<i>Dual</i>	<i>Trial</i>
1st pers.incl.	γ	r	ró	rðæi
1st pers.excl.	γ	γam	γamru	γamðæi
2nd pers.	m	γé	γiru	γðæi
3rd pers.	n	ηér	ηoru	ηér·ðæi

Note. The 3rd person singular and 1st person inclusive plural pronominal suffixes are low (see 2.6.2.).

2.10.1. Pronominal suffixes occur suffixed to suffixing morphemes, e.g. *lym* 'in YOU', *æβðγηér* 'THEIR heads', *mðeyðæi* 'YOUR eyes', *æræn* 'HIS teeth'.

2.10.2. The ancillary pronominal suffix *n* occurs suffixed to suffixing morphemes to which it relates its immediately following expansion (see 3.3.1.4.b), 3.3.2.1.b), 3.3.3.1.a)). It denotes an individualised relationship, e.g. compare *aay enen æryr* 'the boat OF a white man' with *aay ene-ryr* 'white man's boat', so that its expansions hardly ever refer to animals or objects, unless these are designated by a pronoun or are especially set apart from others, e.g. *asaskyn ara mam* 'the flesh OF this pig (NOT of that one)'.

Note. The trial personal pronouns and trial personal pronominal suffixes may be determined by a phrase expansion (see 3.4.) consisting of a numeral from three upwards, e.g. *γamðæi læn* 'the five of us', *aay enenér·ðæi ied* 'the boat belonging to the four of them'.

2.11. PREPOSITIONS

2.11.0. Prepositions are divided into four categories: locative, benefactive/possessive, possessive and directional.

2.11.1. There are two locative prepositions:

a) The preposition *læ-*, construct *l=* 'in, at, on, to, from' denotes general location in space or in time, e.g. *amryrp liar* 'I come FROM the garden'¹, *milró lyβjéi* 'he stays IN the nakamal', *lehié mör* '(IN) that year', *timtinet lyn té* 'they start [counting] FROM one'.

Its construct form fuses with the nouns *ælðð* 'ground', *olom* 'house', *ænvð=* 'eye, opening, cutting edge', *ænvð=* 'underside', and *analó-ðe*

¹The idea of 'from' is conveyed here by the verb *ryr*.

'surf', to give, through the loss of the initial vowel and the lengthening of the following consonant: $l\ddot{u}\delta$, $l\ddot{u}m$, $nn\delta\delta=$, $nn\delta t=$, $nnalo-\delta e$.

b) The preposition $lækæ-$ ($liky-$), construct $liki=$ 'near', which denotes spatial proximity, e.g. $mere\gamma\beta$ $liky\eta$ $\alpha\beta t\alpha r$ 'he cried AT $\alpha\beta t\alpha r$'s PLACE', $\gamma\alpha\beta ysp$ $n\alpha m$ $ehe\delta$ $liki-wak\alpha r$ 'they had been whoring' (literally: 'they had done bad work NEAR women'), $majan$ $læk\alpha en$ 'he went TO his PLACE'.

2.11.2. Benefactive/possessive prepositions may denote either benefaction or possession, e.g. $akep$ $tara$ $it\acute{e}$ $h\alpha em$ 'I will take a pig FOR YOU', i.e. 'I'll give you a pig'; ara $h\alpha em$ 'YOUR pig'.

There are three benefactive/possessive prepositions, which are:

a) na^{-2} , $ne=$ which refers to edibles. When it has for regime the 1st person singular pronominal suffix, it takes the form $ni\eta$ instead of $na\gamma$, e.g. $ta\beta ra$ $it\acute{e}$ $ni\eta$ '[give] ME a bit of pork', $\gamma amkelam$ $os\acute{o}$ $ne-ra$ 'they bring pawpaws FOR the pigs'; $timk\alpha e$ nan 'they cook FOR HIM'.

b) $nne-$, $nne=$ which refers to potables, e.g. $to\beta r\acute{o}$ $it\acute{e}$ $nney$ '[give] me some water'; $\alpha n\alpha\delta$ $nnem$ 'your coconut [for drinking]'.

c) $h\alpha-$, $h=$, a general benefactive/possessive preposition referring to the cases not covered by the other benefactive or possessive prepositions, e.g. compare kep $tara$ $it\acute{e}$ $h\alpha em$ 'take a pig FOR YOU' and kep $tara$ $it\acute{e}$ nam 'take a pig FOR YOU TO EAT'.

NB. When reference is made to a benefactive preposition, this means a benefactive/possessive preposition taken in a benefactive sense, e.g. in kep $tara$ $it\acute{e}$ $h\alpha em$, $h\alpha-$ is a benefactive preposition, whereas in $\alpha n\alpha\delta$ $nnem$, $nne-$ is a possessive preposition, i.e. 'your coconut'.

2.11.3. Possessive prepositions may denote only possession, never benefaction. There are four possessive prepositions:

a) $ia-$ (no construct form) is used for shadows or vomit, e.g. $ommu$ ian 'HIS shadow', olu iey 'MY vomit'.

b) $\beta a-$ (no construct form) is used for smells, e.g. $w\acute{e}$ $\gamma ine\delta$ $timmihyp$ $\alpha\beta\alpha en$ βan 'if he had been dead, one would have smelled HIS ODOUR'.

c) $na-$ (no construct form) denotes relationships of dweller to dwelling, inhabitants to country, protagonists to events, e.g. $a\delta\alpha en$ nen $loworj\acute{e}$ 'people OF Lowerie'; $a\delta\alpha en$ nan 'ITS inhabitant' or 'ITS protagonist'.

¹No vowel alternance.

d) \$na-, \$ne= is used:

1. for possessions considered as indispensable, e.g. atjæn anan 'HIS walking-stick' (an old man's), atjæn hɔn 'his walking-stick' (a young man's); æyr eney 'MY clothes' (which I am wearing now), æyr hæy 'my clothes'.

2. with a few nouns such as aay 'canoe', aðawal 'head-rest', e.g. aay eney 'MY canoe'.

3. for parts of a whole, e.g. æwyl anan 'ITS wheel', æplaŋ anan ða mormor 'several of ITS boards were rotten'; wari anar 'OUR penises' (literally: our husbands. But 'our husbands' in the proper sense is raari¹ hɔr).

Some body parts, however, require the general possessive preposition hɔ-, h=. Such are essi 'breasts' and viscera, which, being attached to the rest of the body by only a few veins and sinews are possibly regarded as less intimately connected to it than other parts, e.g. essi hɔn 'HER breasts', æpekar hɔn 'ITS liver', okon hæy 'MY heart'.

4. to denote close relationships of dependency, for instance, when the existence of one member of the relationship is not conceivable without that of the other member, e.g. æmɔn anan 'ITS heaping', i.e. 'the heap formed by it'; anaðnað enen rki watyr 'the sign OF the chiefs', i.e. 'the sign by which one can tell a chief'; enes anan 'ITS colour'; aβla enen kamam 'the succubus OF this person', i.e. 'the succubus that took her bodily appearance'.

5. in the same meaning as na- above, e.g. aðæŋæn enen loworjé 'people of Lowerie'.

2.11.4. Directional preposition

There is but one directional preposition, denoting movement to or from something or someone. Its uses are very limited and it does not seem to be any longer capable of new constructions. See 3.3.1.3., 3.3.3.3.b) and c), and 3.3.6.1.c). Thus ejeðu karoy 'the sweat OFF my face' formed after ælɔð kuléy 'the dirt OFF my feet' was rejected by informants. The suffixing form kæ- is found mainly in directional complements (see 3.3.6.1.c)) and the construct form k= as an expansion of ordinal pronouns (see 3.3.3.3.b)).

2.12. VERBAL INFLECTIONS

¹Here a kinship term, hence inflected for the plural.

2.12.1. Verbal inflections are fairly complex and it is necessary here to anticipate on the following chapter. Verbs may take a number of expansions (see 3.8.ff.), which, without going *here* into details, are:

a first order expansion

a second order expansion also called included object

a third order expansion also called directional complement

a fourth order expansion

a fifth order expansion consisting of adverb-like constituents.

Finally, certain verbs may take a special kind of expansion called appellative complement.

2.12.2. Verbal strings

By definition, a verbal string consists of a verb, not itself an expansion of another verb, and all its expansions.

The initial verb of a verbal string is called initial verb and is said to be string-initial.

Except for the case when they are part of a gerund or a participle, verbal strings are obligatorily inflected for person and the irrealis/realis mode. They may further be inflected for the definitive or prospective modes, for aspects (perdurative, perfective, continuative), negative voice, and participation.

2.12.3. Inflection for person and the realis or the irrealis

2.12.3.0. Inflection for person and the realis or the irrealis is by fused fourth order prefixes to the initial verb. These prefixes are:

	<i>Singular</i>			<i>Plural</i>			<i>Indefinite</i>
	1st	2nd	3rd	1st	2nd	3rd	
Irrealis	a	∅	γi	ta	γi	γα	ti
Realis	am	m	m\$	tam	γim	γam	tim

Morphophonemic changes:

a) Preceding a bilabial, the m of the realis prefixes am, tam, γim, γam and tim, and the third person realis prefix m\$ are lost. Then, if that bilabial is a w, it becomes β; if it is β initial of a tensed verb¹, it is lengthened, e.g. apót 'I'll break it' from am + pót, βwe 'it aches' from m\$ + wwe, aβorp 'I said it' from am + worp, γaββor-nes 'they

¹See 2.12.8.

spear fish' from $\gamma\text{am} + \beta\text{or}$, the tensed form of *wor* 'to spear it'.

b) The second person singular realis prefix m is lost preceding m (regular application of the morphophonological rules in 1.7.3.), e.g. $m\text{æ}l$ 'you go south' from $m + m\text{æ}l$.

c) The mater vocalium $\$$ of the 3rd person singular realis prefix becomes i preceding consonant-clusters the first element of which is not a semi-consonant, and is lost preceding the perdurative prefix, e.g. *mirlē* 'he sent him' from $m\$ + r\text{l}\text{e}$, *mirja* 'he stood up' from $m\$ + r\text{j}\text{a}$, *millam* 'he keeps coming' from $m\$ + \text{perdurative prefix} + \text{l}\text{am}$, *miłssaru* 'he keeps speaking' from $m\$ + \text{perdurative prefix} + \text{ssaru}$. But *mejrewē* 'he plants yams' from $m\$ + \text{j}\text{rew}\text{e}$.

d) The vowel i of the irrealis prefixes becomes $\$$ preceding a consonant cluster the first member of which is a semi-consonant, and is lost preceding a vowel or a short semi-consonant not member of a cluster, e.g. *tejrewē* 'let's plant yams' from $t\text{i} + \text{j}\text{rew}\text{e}$, *tjan* 'let's go' from $t\text{i} + \text{j}\text{an}$; but: *γilam* 'let him come' from $\gamma\text{i} + \text{l}\text{am}$, *γiwwe* 'it will ache' from $\gamma\text{i} + \text{w}\text{w}\text{e}$.

2.12.3.1. Person

Except in the singular, there is no one-to-one correspondence between the personal pronouns and the person prefixes.

a) The indefinite person covers the meanings of the French *on*, German *man*, and of all the dual and trial personal pronouns, e.g. *timjan* 'we, you or they two or a few go' or: 'on va', 'man geht'.

b) The 3rd person singular also covers inanimate, plural subjects, e.g. *ere-γeni mamir βérβér-reγrey* 'these leaves are [lit.: is] extremely large'.

c) The first person plural is inclusive, e.g. *tamjan* 'we (inclusive) went'.

d) The second person plural is exclusive of the third, e.g. *γimyæð* 'you saw it (but they did not)'.

e) The third person plural covers the remaining meanings, e.g. *γamyænp* 'they, or we (exclusive) or you (and they) ate it'.

2.12.3.2. Realis and irrealis

The irrealis mode is used:

a) in temporal verbal phrases referring to the past or the present (cf. 3.2.2.), e.g. $\beta\text{é}$ *γitari* 'when HE WENT IN'.

b) in themes¹ expressing contrary-to-fact conditions or circumstances, e.g. wé etemeð γίλρὸ 'if THERE HAD BEEN such a thing'; wé tjaβroy-sælp aanen jetar 'if THEY HAD NOT DISOBEYED the word of God'.

c) in rhemes² referring to the future or to a contrary-to-fact present or past, e.g. hinjer γipόρ 'soon IT WILL BE NIGHT', wé tjaβroy-sælp aanen jetar tίλρὸ læhøn βoyβoy 'if they had not disobeyed the word of God, THEY WOULD HAVE STAYED in the good place'.

d) expressing the jussive or the optative, e.g. γέ γjan γihyp ó 'you GO [and] SHOOT that one', lam líkyγ 'COME to me!', aβton γitoy 'I think that it will rain' or 'I hope THAT IT WILL RAIN'.

The realis mode is used:

a) in temporal verbal phrases referring to the future (cf. 3.2.2.), e.g. wé mroy ehl kité 'when YOU HEAR a kingfisher', æβη-eren ðίlén·ara wé meset 'when six days HAVE ELAPSED', i.e. 'after six days'.

b) with quotative verbs, irrespectively of the mode that the meaning would require, e.g. wé eteðemeð γίλρὸ tyl laðði æmerika γamewōrp γαβέ 'if there had been such a thing up there on the moon, the Americans would have said so, THEY WOULD HAVE SAID: "...'.

c) in themes expressing non-contrary-to-fact conditions or circumstances, e.g. líté malam 'if anyone COMES', wé mnao symp tæneð líté 'if YOU ARE THIRSTY, drink a coconut'.

d) in rhemes referring to a non-contrary-to-fact present or past, e.g. té βέ γineð tím'aβðór 'when someone dies, THEY DON'T BURY HIM'.

2.12.4. Inflection for the definitive or the prospective

2.12.4.1. The definitive mode expresses the idea of an action or state to be regarded as final and not subject to revision. It is marked by a third order prefix me to the initial verb, e.g. amewōrp 'I said it (and I will not repeat it)'.
 a

2.12.4.2. The prospective mode expresses a future prospect (usually an unpleasant one). It is marked by a third order prefix to the initial verb, consisting of t plus the same vowel as that of the syllable immediately following, e.g. jaβrosur ðað" æneð γitērer 'don't sit here, coconuts MIGHT fall', wa malakar non" γityhyp té lær 'this one is angry

¹See 4.2.3.

²See 4.2.

now, he MIGHT shoot one of us'.

2.12.5. Inflection for the negative voice

The negative voice is marked by a second order prefix $ja\beta$ to the initial verb. β is lost preceding m and j is almost always lost in those environments where it is otherwise optionally lost (see 1.7.4.), e.g. $maap\acute{e}$ 'it is not full' from $m\$\ + ja\beta + p\acute{e}$; $m'am\acute{e}p?$ 'didn't you ask about it?' from $m\$\ + ja\beta + m\acute{e}p$.

2.12.6. Inflection for aspects

2.12.6.0. There are three aspects: perdurative, perfective and continuative, which are not mutually exclusive, since the same verbal string may be inflected for all three at once, or for the perdurative and the continuative, or the perfective and the continuative (but not for the perdurative and the perfective without the continuative).

2.12.6.1. The perdurative expresses a lasting action or state. It is marked by a first-order prefix $i|$ to the initial verb, i being lost string-initially or following a vowel. $|$ is lost preceding another $|$, which is then lengthened, if it is not already long, e.g. $ami|r\acute{o}$ 'I was staying' from $am + i| + r\acute{o}$; $ami|lam$ 'I kept coming' from $am + i| + lam$; $ami|l\acute{e}$ 'I was bathing' from $am + i| + l\acute{e}$; $ai|r\acute{o}$ 'I will stay' from $a + i| + r\acute{o}$; $l|r\acute{o}$ 'you will stay' from $\emptyset + i| + r\acute{o}$.

2.12.6.2. The perfective aspect is marked by a first order suffix p or t which occurs:

a) if the verbal string contains the directional prefix ri (see 3.3.6.1.c1.), suffixed to the morpheme immediately preceding, e.g. $ya\beta\acute{e}t\text{-}n\acute{e}\delta p\text{-}rilam\ la\delta ay$ 'they plucked coconuts, throwing them to the baskets' (lit.: they pluck it-coconut-come in baskets).

b) otherwise, suffixed to the final constituent of the verbal string, e.g. $\gamma amrosu\text{-}ly\delta\text{-}ho\beta\text{-}jr\acute{e}p$ 'they sat all around it'.

2.12.6.3. The perfective suffix p simply expresses the perfective aspect, which, in Sakao, implies the carrying out of the action to its logical conclusion, e.g. compare $amhy\ enes\ ru$ 'I shot at two birds', $amhyr\ enes\ ru$ (continuative) 'I shot at two birds (and missed)', $amhy p\ enes\ ru$ (perfective) 'I shot two birds'. In the case of verbs of motion, the perfective often implies a return to rest after movement, e.g. $mejer\delta y\gamma$ 'he ran', $mejer\delta y\gamma p$ 'he ran (AND STOPPED)'. With other verbs,

the perfective often implies the return to the conditions prior to the action or state, e.g. amhaβylp 'I went west [i.e. to Big Bay] AND I AM BACK NOW'.

2.12.6.4. The perfective suffix t, besides the perfective aspect, expresses ideas of ablation such as by cutting off or carrying away, of separation such as by enclosing, and, by extension of meaning, of circular motion or shape, e.g. amrét ærk-olkley 'I cut my finger OFF' as against amrép ærk-olkley 'I cut my finger'; motót æβðæn 'she hacked its head OFF', motóp ulén 'he cut his leg (with an axe)', γamket aay té γamlam 'they took a boat and came', timryt nar-γβjél 'they built a fence AROUND the nakamal's yard', timjartet 'they built an enclosure', aay mælyðt urær 'the boat went around the island (IN A CLOSED CIRCLE)', as against aay mælyðp urær 'the boat went around the island (IN AN OPEN CURVE), olom ɔm timrumt 'that house [which] they had DIVIDED INTO rooms' (rum 'to "room"' from the Bichelamar rum 'a room'), orru ɔm βé γiholtt-rilam 'when that pygmy came flying IN CIRCLES', βilét ni 'he turned himself ROUND', i.e. 'he turned round'.

2.12.6.5. If, however, the perfective suffix is to occur suffixed to an included object or a fifth order expansion, only the suffix p may be used, regardless of the meaning, e.g. γaβæt-næðp-rjan laðay 'they plucked coconuts, throwing them to the baskets' (lit.: they pluck it-coconuts-go to baskets), amré-βoyβoypin 'I cut it [off] well'.

2.12.6.6. The verb kæi 'to seek' takes the form kææ preceding the perfective suffix p, e.g. amkæp 'I found it'.

2.12.6.7. The continuative aspect is marked by a second order suffix r to the final constituent of the verbal string, unless the verbal string contains a directional preposition or the directional morpheme ki (see 3.3.6.1.c).), in which case it must remain uninflected for the continuative.

The continuative expresses the continuation of a state or the non-completion of an action to its logical conclusion, e.g. βé γwanr 'when it bears fruit' as against βé γwanp (perfective) 'once it has borne fruit', mæðvr 'he was carrying it' as against mæðvp (perfective) 'he carried it (and, having carried it, laid it down)', amhyr enes ru 'I shot at two birds (and missed)' as against amhyp enes ru (perfective) 'I shot two birds (and killed them)'.

2.12.6.8. When a verbal string is inflected for the perfective and the

continuative at once, it expresses the continuation of a state resulting from a perfected or interrupted action, e.g. Of the sole, the Sakaos say: *jetar məyənt_r* (perfective-continuative) '*God ate it off and let it go*'; *amhypr enes ru* '*I shot two birds and left them*', *timtteré-_{vorpr}* *anaðhal* '*they closed the door (and it remained closed)*'.

2.12.6.9. The aspect suffixes are lost when following a morpheme ending with a consonant cluster, e.g. *ɣamher_t* '*they sang*' (continuative or perfective aspect unspecifiable).

2.12.7. Inflection for participation

2.12.7.0. By definition, the participants of an inflected verbal string constitute its *participation*. One of the participants, the subject, is always marked by the fourth order prefix to the initial verb.

2.12.7.1. There are four possible participations:

a) The subjective participation, i.e. the verbal string has only one participant: a subject, e.g. *amlam* '*I came*'.

b) The objective participation, i.e. the verbal string has two participants: a subject and an object, e.g. *am'ilp* '*I killed it*'.

c) The instrumentive participation, i.e. the verbal string has two participants: a subject and an instrument, e.g. *meneðin* '*he was dying of it*'.

d) The triple participation, i.e. the verbal string has all three participants: subject, object and instrument, e.g. *milipin* '*he struck him with it*'.

2.12.7.2. In order to determine the participation of a verbal string it is necessary to determine first the transitivity of the same verbal string uninflected.

As regards transitivity, verbs and verboids (i.e. determining verb-like morphemes) fall into three categories: intransitive, transitive, and in-transitive.

To determine the transitivity of a given verbal string:

a) First determine the transitivity of the part of that string that extends from the initial verb inclusively to the fifth expansion exclusively, disregarding intransitive verbs and verboids and directional complements. *Then* (rules ordered):

1. if this part of the string ends with an appellative complement,

it is *in-transitive*.

2. if it ends with an included object, it is *intransitive*.

3. if it ends with a transitive verb or verboid, it is *transitive*, and has the same transitivity as that verb or verboid (i.e. *transitive* or *in-transitive*).

4. otherwise, it is *intransitive*.

b) Then, if a fifth order expansion other than the adverb *jré* 'all' occurs in the whole string, and if the part of the string the transitivity of which has just been determined is *transitive* or *in-transitive*, the whole verbal string is *detransitivised*. Otherwise, its transitivity is the same as that of the aforesaid verbal string, e.g. *γæðherl-βoyβoy* 'know-well': *γæðherl* is *transitive*, a fifth order expansion other than *jré* occurs (*βoyβoy*), hence *γæðherl-βoyβoy* is *detransitivised*. In *ró-βoyβoy* 'stay-well', *ró* is *intransitive*, hence *ró-βoyβoy* is *intransitive*. In *wel-rilam-jré* 'call-come-all', *wel-rilam* is *transitive* (*wel* is *transitive* and *rilam*, a directional complement, is to be disregarded); there is a fifth order expansion: the adverb *jré*. Hence the whole verbal string is *transitive*.

c) Now, verbal strings other than those containing a directional preposition or the directional morpheme *kl* (these must remain uninflected for participation and the continuative aspect) are inflectable for participation by suffixing a third order suffix *in* to their final constituent, e.g. *γæðherl-βoyβoyin* 'to know it well'.

d) The participation of the verbal string can now be determined from the following table:

If the verbal string is:	uninflected for participation	inflected for participation
<i>in-transitive</i>	does not occur ¹	<i>objective</i>
<i>transitive</i>	<i>objective</i>	<i>triple</i>
<i>detransitivised</i>	<i>subjective</i>	<i>objective</i>
<i>intransitive</i>	<i>subjective</i>	<i>instrumentive</i>

Note 1. *in-transitive* verbal strings are obligatorily inflected for participation.

2.12.7.3. The participants

Except for the subject (see 2.12.7.0.), the participants of verbal strings are unspecified for person and number.

a) The subject is that of the initial verb, e.g. *mættæγ-sa-nes* 'he starts birds' (lit.: *he tracks it - fly off - birds*).

b) The object is that of the last transitive verb or verboid of the string, e.g. *mæræn-hoβ ohe* 'he went all over the village mourning [his wife]', literally: *he mourned her - follow it village*.

c) The instrument denotes the necessary means of the action or state expressed by the verbal string. These means may be:

1. strictly instrumental, e.g. *millin amas* 'he strikes it WITH A CLUB'.

2. causal, e.g. *petjatpin akyr-yeni té* 'he stumbled ON A ROOT', *kae mejeγarin apel* 'Cain was jealous OF ABEL', *merretpin atamam* 'he was startled AT THIS THING', *æpæs γamsorpin jæn* 'the dogs barked AT ME'.

3. essential to the subject, e.g. *jetar moróin ðæl* 'God stays OF THREE', i.e. 'God consists OF THREE', *ojó mam mærypín ina* 'this snake sprouted AS YAMS'.

4. locative, e.g. *mosonép-ritarlin æβðæn oβu* 'it pushed its head in THROUGH THE HOLE', *æβðæn makarpín oβu* 'its head was sent flying THROUGH THE HOLE'.

2.12.8. Tensing of initial verb

When a verbal string contains an included object, the initial consonant of its initial verb undergoes certain changes provided that it is short, followed by a vowel, and that the initial verb is neither repetitive nor intensive. Verbs which have undergone such changes are called *tensed*.

a) an initial *w* optionally becomes *β*.

b) an initial *r* optionally becomes *ɾ*.

c) other consonants become long, except *j*, *h* and *ɾ*, which remain unchanged.

2.13. VERBS AND VERBOIDS

2.13.0. As regards their inflection and distribution in the phrase, verbs (which are free morphemes) and verboids (which are bound determining morphemes) fall into five categories.

2.13.1. Adjectives, which are those intransitive verbs which express qualities ascribed to persons, animals, or things, e.g. *kar* 'red', *βriβ* 'large, big', *βiηæn* 'heavy', *pere* 'long'. Adjectives may, besides

functioning as verbs proper (e.g. *makar* 'it is RED', *þé γiþriþ* 'when it is BIG') qualify nouns (cf. 3.8.1.a)), or modify verbs (cf. 3.8.1.e)2.), e.g. *ara kri té* 'a SMALL pig', *γæn-kriþin etenar* 'eat A LITTLE food'.

Three adjectives have a distributive form: *þriþ* 'big', distributive: *þérþér*; *kri* 'small', distributive: *kkri* or *kikri*; *þyr* 'black', distributive: *þyrþyr*. The distributive form is used when the subject or the referent qualified is not singular, e.g. *ara kkri* 'small pigs', *γaþé γaþérþér* 'when they are big'. When functioning as a fifth order expansion of a verb, the distributive adjective *þérþér* means 'often', e.g. *Joru timró-þérþér* 'they two stay often', i.e. 'they are often together'.

When an expansion and following a consonant, the adjective *heð* 'bad' takes the form *eheð*, e.g. *ném eheð* 'bad work', *mþys-eheðþin* 'you did it wrongly'.

2.13.2. Verbs proper, which may be transitive, in-transitive, or intransitive, e.g. *haré* 'to reward him', *hé* 'to run away', *sal* 'to swing', *sjer(in)* 'to send him', *ηl(in)* 'to grant it'.

Some transitive verbs are reflexive, i.e. their object must be supplemented by a personal pronoun agreeing with their subject, e.g. *ænð-me þé γiþælp ni* 'when the sun appeared', literally: 'when the sun showed ITSELF'.

2.13.3. Directional verbs and verboids

a) Directional verbs are those verbs which, expressing motion to, from or through, may function either as verbs proper or as elements of a directional complement determining the direction of an action or the relative location of a state, e.g. *maJan* 'he WENT', *mokoþrép-rJan* 'he threw it AWAY', *moró-rJan* 'he stays ON THE FAR SIDE' (lit.: 'stay-go').

Directional verbs are:

<i>hatær</i>	<i>to go north</i>
<i>mæl</i>	<i>to go south</i>
<i>haþyl</i>	<i>to go west</i>
<i>hu</i>	<i>to go east</i>
<i>Jan</i>	<i>to go</i>
<i>lam</i>	<i>to come</i>
<i>kersa</i>	<i>to go up</i>
<i>saŋær</i>	<i>to go down</i>
<i>tatær</i>	<i>to go out</i>
<i>tari</i>	<i>to go in</i>
<i>talpær</i>	<i>to return</i>
<i>γe</i>	<i>to go by</i>

ʒe to go where?
 jé to go near¹

b) directional verboids occur only in directional complements with the prefix *ri*. Three directional verboids were found in the corpus:

sa up
 su down
 tær out

For example, *meke-rsa* 'he put it up', *meke-rsu* 'he put it down', *meke-rtær* 'he took it out'.

2.13.4. Other verboids occur only as second order expansions of verbs. Six such verboids were found in the corpus:

tyt one at a time, bits by bits
 ryr fast, firmly, steadily
 sæþ to death
 sé stealthily
 sé whilst waiting for it
 hyr in order to get it

The latter two are transitive, the former two intransitive. As for *sé* and *sæþ*, since they occur only as expansions of transitive verbs, it was not possible to determine whether they are transitive or intransitive.

For example, *timjel-tytp-risu* 'they jumped down ONE AT A TIME', *té-ryr* 'hold it FIRMLY', *ʒamtæl-sæþ* *ara ɒm* 'they tread that pig TO DEATH', *mæky-sép* 'he stole it' (lit.: he took it STEALTHILY), *ʒamkæə-sé aarl* 'they cooked WHILST WAITING FOR the men', *alam-hyr-metrin* 'I will come TO GET IT later'.

2.13.5. Defective verbs

Defective verbs are not expandable, and are inflected only for person and the realis or the irrealis. The most common defective verbs are:

a) Numeral verbs, which are:

ter hundred
 mæn thousand

and compounds formed of *ʒæl* 'ten' and a numeral from one to nine, i.e.

¹Rare. Mainly found as member of directional complements, with the tentative directional prefix, to express tentative action, e.g. *akæl-ʒjéþ* 'I'll TRY TO look for it'.

γælté	ten
γælrú	twenty
γældæi	thirty
γælleð	forty
γæléñ	fifty
γæléñ·ara	sixty
γæléñ·ere·ru	seventy
γæléñ·ere·tæi	eighty
γæléñ·ere·peð	ninety

For example, aðæŋæn γamyælté 'TEN persons'.

b) Quotative verbs, which are wé 'to say or think' and βton 'to believe'. Quotative verbs are always in the realis, irrespectively of the mode that the meaning would require, and they always occur immediately followed by a quotation, direct or indirect, which may be any utterance. The 2nd and 3rd person singular of βton are irregular, being respectively mβoton and βoton.

c) The ancillary verbs stat 'to start' (borrowed from Bichelamar) and jar, expressing the immediate past, e.g. am'ar alam 'I just arrived', βé γi stat æjæm 'when he started to work'.

d) The negative verb ré 'not to be', which occurs always in the third person singular, e.g. taðæŋæn Ité meré 'there wasn't anyone', noβ γi ré" ere ði tikyn 'let it not be male pigs, only intersex pigs'.

e) The verb γγν 'to have name' was found only in the third person singular realis, followed by a proper pronoun or the interrogative pronoun hi 'who?', e.g. mæγyn hi? 'what is his name?', mæγyn ser 'his name was Ser', aasém mæγyn hi? 'your name is called who?', i.e. 'what is your name?', aaséγ mæγyn sak 'my name is Jacques'.

2.14. VERB FORMATION

Verbs are formed by derivation:

2.14.1. Intensive verbs expressing assiduity and/or protraction are formed by prefixing to a verb stem a segment consisting of the initial consonant of that verb stem plus the vowel of its first syllable affected by expressive intonation, e.g. ððððði from ði 'to carry it'. If the consonant to be thus repeated is long, it becomes short, e.g. tæættæγ 'to track it assiduously and/or at length', from ttæγ 'to track it'; timγææγæn βé γihær timjan timjes 'they ate it at length [and] when it was finished they went for a walk'; miiró ton ehlé ðæi meré leð"

m|lróóró 'he stayed for maybe three or four years, he stayed for a long time'.

2.14.2. Repetitive verbs expressing either repetition or reciprocity are formed by the total reduplication of a CVC segment (C representing a single short consonant, the second one different from the first one) of a verb stem, provided that it is either stem-final or followed by a consonant, and that it is not part of a simple reduplication (cf. 1.18.10.), e.g. holhol 'to fly repeatedly' from hoi 'to fly', pokylkyl 'bent in several places' from pokyl 'bent', koβkoβré 'to throw things repeatedly' from koβré 'to throw it'; mγæð aðæghæn γamilγelγel 'you see people busy DIGGING AND DIGGING', joru t:βé t:ndsnpsr joru 'when they ARE IN LOVE WITH EACH OTHER', γamilhoβhoβ Jær 'they keep FOLLOWING EACH OTHER'.

In some expressions the repetitive has a diminutive meaning, e.g. merenren 'it is hardly daytime, it is dawn', as against meren 'it is daytime', pórpór 'it is becoming dark' as against pór 'it is night'.

Note. A verb may be at once repetitive and intensive, e.g. mækaækael 'he looked for it assiduously and repeatedly' from kæl 'to seek it'.

2.14.3. Verbs are derived from free nouns

a) by deleting the initial \$ of class Ia nouns, e.g. ðenm 'to change oneself into a devil' from eðenm 'devil', ra 'to change oneself into a pig' from ara 'pig'.

b) by prefixing J to the initial l of class Ib nouns, e.g. Jisa 'to become friends' from isa 'friend'.

c) by replacing the initial n of class Ic nouns by J, e.g. Jæm 'to work' from næm 'work', Joβ 'to kill pigs' from noβ 'male pig'. Note: This derivation does not seem to be any longer productive.

2.14.4. Other derivations, which are no longer productive, are:

a) intransitive verbs from transitive verbs, formed by the prefixation of jer and/or the changing of a vowel, e.g.

TRANSITIVE	INTRANSITIVE
γæn to eat it	γen to eat
γæl to dig it	γel to dig
γæt to sting him	jerγet to itch
kæð to insult him	Jerkeð to swear
tpr to prevent him	Jertar to put a taboo
γon to be bitter to him	Jerγon bitter

sé	to cure him	se	to cure
lyγ	to transfer it	jelyγ ¹	to commute

b) causative verbs are formed from intransitive ones by prefixing Jε and changing the vowel.

INTRANSITIVE	CAUSATIVE (TRANSITIVE)		
γen	to eat	Jæγæn	to feed him
nɔð	to wake up	Jenað	to wake him up

2.15. ADVERBS

Adverbs are determining morphemes which mainly occur as fifth order expansions of verbs. Three adverbs occurred in the corpus:

tor	always, uninterruptedly
usi	very, much, a lot
jré	all, completely

(this list is probably exhaustive)

For example, γappe-tor ðor 'they always meet there', pere-usi 'it is very long', timesyk-jrép in wɔmir 'we have finished borrowing all those [pigs]'

2.16. ADNOMINA

An adnomen is a determining morpheme. Adnomina determine substantive-like words, i.e. nouns, pronouns, numerals, nominalised adjectives and adjectivoids. Three adnomina were found in the corpus:

tikyn	only, alone
jrép	all, whole
nɔttur	exactly, properly

(this inventory is probably exhaustive)

For example, nɪ tikyn miɪrɔ 'he stayed ALONE', té tikyn 'ONLY one', ɪreγ jrép βwe 'my WHOLE body aches', Jær jrép γamɪam 'they ALL came', ðanan nɔttur 'his father (NOT AN UNCLE)'

2.17. ADJECTIVOIDS

Adjectivoids are determining morphemes which, as first order expansions, qualify nouns (cf. 3.3.1.a)), and, as fifth order expansions,

¹The r of jer is lost.

modify verbs (cf. 3.8.1.e)3.). Two adjectivoids occurred in the corpus:

pel *other, different*
 tiβle *plain, ordinary*

(this inventory is probably not exhaustive)

For example, aðæŋæn pel té 'a different person', æhy tiβle 'ordinary rifle'.

2.18. NOMINALISED ADJECTIVES AND NOMINALISED ADJECTIVOIDS

Nominalised adjectives and nominalised adjectivoids are substantive-like free morphemes formed by prefixing o (or, optionally, u when the following syllable contains a high vowel) to adjectives and adjectivoids, e.g. okar 'red one(s)' from kar 'red', ukri 'small one' from kri 'small', opel 'different one(s)' from pel 'different', utiβle 'ordinary one(s)' from tiβle 'ordinary'.

Nominalised adjectives and adjectivoids are unspecified and uninflectable for number, e.g. osiβðð 'sick one' or 'sick ones'.

2.19. PARTICIPLES

Participles are substantive-like free morphemes formed by prefixing o (or, optionally, u when the following syllable contains a high vowel) to verbal strings uninflected for person and the realis or the irrealis, e.g. oræsp ɒl jɔr military-hoβ jɔr 'HE WHO MADE us keeps looking after us', oljæn-sé lðel niŋ 'THE ONES WHO KEPT STEALING (lit.: eating stealthily) my bananas', olrópr lurær ɣam+iha 'THOSE WHO HAD STAYED in the island kept on dancing'.

2.20. GERUNDS

Gerunds are substantive-like free morphemes formed by prefixing \$ to verbal strings uninflected for person, the realis or the irrealis, the definitive or the prospective, and the negative voice, e.g. ɣamnɒs æjæn uræŋ 'they liked TO EAT lobster', mɣæðheri æmá-ɣjæp in 'you can TRY AND ASK HIM ABOUT IT', amsækɒl eneð-saylé 'I'm afraid of DYING YOUNG'.

Note. Participles and gerunds are unspecified and uninflectable for number.

2.21. MODAL PARTICLES

Modal particles are determining morphemes that modify the referents

of phrases. There are eight modal particles:

2.21.1. The modal particle *riβyl* covers the meanings of the English 'again, anew', e.g. *eðenm móm mohob riβyl Joru* 'that devil FOLLOWED them AGAIN'; *opolγaβ mæhær ye æsæl riβyl* 'the opolghav dance is finished and [it is] THE FLUTE AGAIN', *Jæn asyr-hop riβyl orru pel té* 'I WILL TELL AGAIN another pygmy [-story]'

2.21.2. The modal particle *ɒl* expresses the idea that the referent of the phrase occurs or participates in an event on its own, as distinct from others. It is translatable by the English 'just, only', e.g. *ða γam''ll ere ɒl* 'some kill ONLY INTERSEX PIGS', *motoγ ɒl* 'it does nothing but rain', *aljé ɒl'' aljé ɒl* 'each lineage separately' (lit.: lineage on its own, lineage on its own).

In a derived sense, *ɒl* often expresses the speaker's genuine or feigned unconcern (like in English 'just'), e.g. *ettiblé'' ajan ɒl ajað* 'who cares (lit.: ordinary thing), I'LL JUST GO and get killed'.

2.21.3. The modal particle *rær* has an adversative meaning, e.g. *mæγæð rær aakær sere kité* 'HE SAW INSTEAD [of what he was looking for] a nubile girl', *nél·sys rær* 'falling stars, on the other hand...'

2.21.4. The modal particle *na* expresses the idea of newness: new action, new participants, new circumstances etc., e.g. *Jør·ðæl na tiðemé?* 'what shall WE do NOW?', *aari na té tikyn mīlró* 'AND there was only one MAN'.

When expanding a verbal phrase, *na* often expresses the inceptive (French: 'se mettre à'), e.g. *motoγ na* 'it's raining now', 'voilà qu'il se met à pleuvoir'.

2.21.5. The modal particle *βa* covers the same meanings as the English 'still, yet' (adversative excepted), e.g. *maaβhær βa* 'it is not finished yet'. When expanding a nominal phrase, it denotes that its referent continues or awaits partaking in an event or series of events, e.g. *hao'' Jæn βa* 'all right, ME NOW', i.e. 'it's my turn now'.

2.21.6. The modal particle *le* expresses certainty or resolve, e.g. *meré βa'' yor le ætøm* 'not yet, DO STOP that thing [the tape-recorder]'

2.21.7. The modal particle *pe* denotes a correction or a more likely alternative, e.g. *ora meré'' ere pe* 'it is not a sow, BUT AN INTERSEX PIG'; *ser bé Jør taryr'' ðjøn pe* 'Ser said: "Let's shed our skins"...

NO, HIS MOTHER [SAID THAT]'.

2.21.8. The modal particle βyn expresses uncertainty or irresolution,
e.g. jæn βyn atari-pərp i? 'MAY I go inside with you?'.

2.22. OTHER MORPHEMES

Other morphemes (directional morpheme ki , adjuncts) will be discussed
in the Grammar and the Syntax as they occur.

CHAPTER 3: GRAMMAR

3.0. There are two main types of phrases: verbal and nominal.

3.1. NOMINAL PHRASES

Nominal phrases are further dividable into two basic types: stative and completive.

3.1.1. A stative nominal phrase consists of any one of the following:

- a) a noun, e.g. ara 'pig'.
- b) a pronoun other than a locative or an iterative pronoun, e.g. nɪ 'he', kam 'this person'.
- c) a numeral other than a definite one, e.g. tɛ 'one, someone'.
- d) a nominalised adjective or adjectivoid, e.g. okar 'red one(s)'.
- e) a participle, e.g. oræsp 'he/they who made it'.
- f) a gerund, e.g. eke-rkl 'removing it'.

3.1.2. A completive nominal phrase consists of any one of the following:

- a) a locative preposition, e.g. lym 'in you'.
- b) a benefactive preposition, e.g. hæɣ 'for me'.
- c) a locative pronoun, e.g. ðað 'here', kanal 'in Luganville'.
- d) an iterative pronoun, e.g. ðatɛ 'once'.
- e) a noun in the irrealis, denoting place or time, e.g. tæhɒn '[some] place'.
- f) mæhæn¹ immediately followed by a gerund, e.g. mæhæn æɣæn 'in

¹For example, the possessive pronoun mæhɒ- with the ancillary pronominal suffix n for regime.

order to eat it'.

3.2. VERBAL PHRASES

Verbal phrases are dividable into two basic types: stative and temporal.

3.2.1. Stative verbal phrases are subdivided into three types: general, auxiliary, and quotative.

a) A general stative verbal phrase consists of a verb other than a quotative verb, e.g. *mæhyp* 'he shot him', *ɣamɣæð* 'they saw it'.

b) An auxiliary stative verbal phrase consists of the defective ancillary verb *jar* (expressing the immediate past) or *stat* 'to start, begin' immediately followed by a gerund, e.g. *am'ar alam* 'I just arrived'; *ɣamstat æjɛm* 'they start work'.

c) A quotative verbal phrase consists of a quotative verb immediately followed by a quotation, direct or indirect, which may be any utterance, e.g. *βé hu* 'he said: "Wow!"'.

3.2.2. A temporal verbal phrase consists of a general or auxiliary verbal phrase introduced by the quotative verb *wé* 'to say' immediately preceding.

If the temporal verbal phrase refers to the past or the present, the quotative verb *wé* is inflected for the realis and the same person¹ as that of the verbal phrase it introduces, which is itself inflected for the irrealis, e.g. *aβé ajan* 'when I go' or 'when I went'.

If the temporal verbal phrase refers to the future, the quotative verb *wé* is uninflected and the verbal phrase it introduces is in the realis, e.g. *wé amjan* 'when I go' (future).

3.3. EXPANSIONS AND REGIMES OF PHRASE-CONSTITUENTS

3.3.1. Nouns

3.3.1.1. Free nouns² may take:

¹Individual variation: in some speakers' idiolects, the quotative verb *wé* is inflected for the 3rd person singular in all cases.

²A free noun can have only one first order expansion. Hence it may not be determined by more than one adjective, since when two adjectives occur, the second one determines the first one, not the preceding noun. A second adjective determining a noun in English has to be rendered in Sakao by a supplementation, e.g. 'the small white pig' is *ara kri βóɣ* 'the small pig [which] is white' or *ara wóɣ mikri* 'the white pig [which] is small' or *ara wóɣ ukri* 'the white pig, the small one', etc.

a) a first order expansion consisting of an adjective or an adjectivoid, e.g. ara βérβér '*big pigs*', ara tíβle '*plain, ordinary pigs*'. This adjective may itself take an expansion consisting of another adjective, e.g. apu βérβér-ðom '*headdresses big like that*'.

b) a second order expansion consisting of a possessive preposition, e.g. wakær hæm '*your wife*', osot kar hæm '*your red shirt*'.

3.3.1.2. The noun rki '*people*' may, instead of the above expansions, be expanded by the locative pronouns tyl '*above*' (meaning in this case the Sakao plateau), jeha '*west*' (meaning in this case Big Bay), e.g. rki tyl '*Sakao men-bush*', rki jeha '*people of Big Bay*'.

3.3.1.3. Two cases of free nouns expanded by a directional preposition occurred in the corpus, i.e. ælþð kulé- '*the dirt OFF the feet*' and ænþð kere-tenar '*[one's] place at a banquet*' (lit.: '*room OFF the food-leaves*').

3.3.1.4. Suffixing nouns are obligatorily immediately followed by a regime consisting of any one of the following:

a) a personal pronominal suffix, e.g. ðeney '*MY father*', mðar '*OUR eyes*'.

b) the ancillary pronominal suffix, which is itself obligatorily immediately followed by an expansion consisting of any one of the following:

1. a noun, e.g. ðenen amarkar '*the father OF THE CHILD*'.

2. a pronoun other than a personal pronoun or a possessive pronoun, e.g. ðenen kam '*the father OF THIS PERSON*'.

3. a numeral other than a definite one, e.g. walðyn té '*SOMEONE'S child*'.

4. a nominalised adjective or adjectivoid, e.g. olæn uβriβ mðr '*the tail OF that BIG ONE*'.

5. a participle, e.g. walðyn oræsp jðr '*the son OF HIM WHO MADE US*'.

3.3.1.5. Construct nouns are obligatorily immediately followed by a regime consisting of a noun, e.g. æβyð-amarkar '*CHILDREN'S heads*', ærpk-olkia- '*twigs OF HAND*', i.e. '*fingers*'.

3.3.1.6. The enclitic noun \$tE '*thing*' is obligatorily immediately followed by an expansion consisting of one of the following:

a) an adjective or an adjectivoid, e.g. eteðemeð 'SUCH a thing', ettiþle 'ORDINARY thing'. The enclitic noun may in this case take a second order expansion consisting of a possessive preposition, e.g. ettiþle hæð 'HIS ordinary things', i.e. belt, ammunition and tobacco pouches, and pipe.

b) one of the numerals té 'a, one', kité 'a certain', ða 'some, several', kiða 'certain', e.g. etikté 'A CERTAIN thing'.

c) a nominal demonstrative, e.g. atamamir 'THESE things'.

d) a benefactive/possessive preposition, e.g. atanam 'YOUR EDIBLE things'.

3.3.2. Prepositions

3.3.2.1. Suffixing prepositions are obligatorily immediately followed by a regime consisting of any one of the following:

a) a personal pronominal suffix, e.g. lyꝝ 'in ME'.

b) the ancillary pronominal suffix, itself immediately followed by an expansion consisting of one of the following:

1. a noun, e.g. raðén hæð aakær 'the relatives OF THE WOMAN'.

2. a pronoun other than a personal pronoun or a possessive pronoun, e.g. æhy hæð ó 'the rifle OF THAT ONE'.

3. a numeral other than a definite one, e.g. æhy hæð té 'SOMEONE'S rifle'.

4. a nominalised adjective or adjectivoid, e.g. nan ukkri mþrþr 'food FOR those LITTLE ONES'.

5. a participle, e.g. æhy hæð ohyp ó 'the rifle OF THE ONE WHO SHOT that one'.

6. if the preposition is a possessive one, a locative pronoun¹, e.g. æþt-wari enen mææþ 'the oldsters of long ago'; rki nen tyl 'people of above', i.e. 'men-bush'.

3.3.2.2. Construct prepositions are obligatorily immediately followed by a regime consisting of a noun, e.g. læjém 'at work', aay ene-ryr 'white men's boat'.

3.3.3. Pronouns

3.3.3.1. Possessive pronouns

¹Individual variation (influence of Hog-Harbour): or a locative preposition, e.g. rki nen lohe 'people of IN THE VILLAGE'.

a) Suffixing possessive pronouns take the same obligatory regimes as possessive prepositions. The suffixing possessive pronoun *məhp-* may besides take for regime the ancillary pronominal suffix followed by an expansion consisting of a gerund, in which case it has a purposive meaning, e.g. *məhæn iilp* 'in order to KILL HIM'.

b) Construct possessive pronouns are obligatorily immediately followed by a noun, e.g. *menne-ra* 'something to drink for THE PIGS'.

3.3.3.2. Locative pronouns

a) The locative pronoun *matjer* 'long ago' may take an expansion consisting of the adverb *usi* 'very', e.g. *matjer usi* 'very long ago'.

b) The locative pronoun *mæræn* 'before' may take an expansion consisting of either the adverb *usi* 'very' or the suffixing directional preposition *kæ-* with the 3rd person singular pronominal suffix for regime, i.e. *mæræn usi* 'long ago', *mæræn kæn* 'before it, previously'.

c) The locative pronoun *lakren* 'tomorrow' may take an expansion consisting of the directional preposition *kæ-* with the third person singular pronominal suffix for regime, i.e. *lakren kæn* 'on the following day'.

3.3.3.3. Ordinal pronouns

a) Ordinal pronouns may take an expansion consisting of the suffixing directional preposition *kæ-* with the 3rd person singular pronominal suffix for regime, e.g. *təl kæn* 'the third one [of them]'.

b) Alternatively, ordinal pronouns from two to six may take an expansion consisting of the construct directional preposition *k=* with the noun *amar* "chimney-stack"¹ for regime, thus forming the names of five of the six "chimney-stacks" built to the south of the *nakamal* for the ritual of *Vuriar* (*æβyrjɔr*) and *Vuriaru* (*æβyrjɔr-ru* or *eðenm-æβyrjɔr*)², e.g. *tu kamar* 'second chimney-stack'.

c) Alternatively, the ordinal pronoun *sayyl* 'tenth' may take an expansion consisting of the construct directional preposition *k=* with, for regime, a noun formed by prefixing *\$* to a numeral verb stem. This construction yields ordinal pronouns for ten and multiples of ten, e.g. *sayyl kæyælté* 'tenth' (same meaning as *sayyl*), *sayyl kæyælrū* 'twentieth'

¹Cf. Deacon (1929:467).

²The six "chimney-stacks" to the north of the *nakamal* are unnamed.

etc. until *saɣyl keter* 'hundredth'. *saɣyl kæmæn* 'thousandth' is unused.

3.3.3.4. Proper pronouns denoting persons may take an expansion consisting of the particle *ɣiru* 'and companions', e.g. *kuslak ɣiru* 'Little Finger and his companions'.

3.3.3.5. The interrogative pronoun *hi* 'who?' may take either one of the following:

a) an expansion consisting of the particle *ɣiru* 'and companions', e.g. *hi ɣiru?* 'who?' (plural).

b) a regime consisting of a free noun, unexpanded. *hi* then takes the meaning of 'which...?', e.g. *hi hy?* 'which rifle?', *hi aðæŋæn?* 'which person?', *hi éð?* 'which star?'.

3.3.4. Numerals

The numeral *té* 'one, someone' may take an expansion consisting of a possessive preposition, e.g. *té enen tyl* 'one of above', i.e. 'a man-bush'.

3.3.5. Nominalised adjectives and adjectivoids

Nominalised adjectives and adjectivoids may take an expansion consisting of a possessive preposition, e.g. *okar anan* 'the red of it', i.e. *the red part(s) of something*.

3.3.6. Verbs

3.3.6.1. Verbs (other than defective ones, which are not expandable) may take:

a) a first order expansion provided that no other first order expansion of a verb precedes in the verbal string. This first order expansion consists of either one of the following:

1. a verboid, e.g. *ɣamtæl-sæβ* 'they tread it TO DEATH', *amté-ryr-usirin* 'I held it very FIRMLY'.

2. if the verb expanded is transitive, an intransitive verb describing the result of the action expressed by the transitive verb it expands on its object (which is then the logical subject of this intransitive verb), e.g. *mættæɣ-sa-nes* 'he starts birds' (lit.: *he tracks it FLY OFF birds*).

b) a second order expansion, or included object, consisting of either one of the following:

1. a free noun, unexpanded, uninflected, e.g. *mættæɣ-sa-nes* 'he

starts BIRDS'.

2. a suffixing noun with a personal pronominal suffix for regime, the suffixing noun being uninflected, e.g. *γamtté-oiklenérpr* 'they hold (THEIR) HANDS'.

NB. The second order expansion may occur only if the verb to be expanded is either transitive or in-transitive, or if it has a first order expansion consisting of a transitive verboid, and if no other included object occurs in the verbal string.

c) a third order expansion, provided that no other third order expansion precedes in the verbal string. This third order expansion, or directional complement, consists of either one of the following:

1. the directional prefix *rí*¹ prefixed to one of the following:

- a directional verb or verboid, unexpanded, e.g. *ke-ríam* 'hand it over' (lit.: *take it - come*).

- the directional preposition *kæ-* or *k=*, e.g. *meke-rkyn eseþyr* 'he took it (i.e. 'gave it') to the sorcerer'.

- the directional morpheme *kl*, expressing movement away from somewhere, e.g. *meke-rki* 'he removed it'.

2. the directional prefix *γí*² prefixed to a directional verb, unexpanded. This prefix denotes tentative movement, e.g. *meýer-γíhatær* 'he swam to the north to see, to feel the way'.

NB. The occurrence of a third order expansion containing a directional preposition or the directional morpheme *kl* prevents a fourth or/and a fifth order expansion from occurring in the verbal string.

d) a fourth order expansion consisting of a verb other than a defective one. This verb expresses the development of the action or state expressed by the verb it expands, and shares the same subject³, e.g. *meke-ýer-lam* 'he took it [he] swam [he] came', i.e. 'swimming across, he brought it'; *γam-ré-ra-jan-hoþ* 'they drag it pigs [they] go [they] follow it', i.e. 'they follow [an alignment], dragging the pigs away'.

NB. The occurrence of a fourth order expansion prevents the verb it expands from taking a fifth order expansion. But the verb which constitutes this fourth order expansion may itself have a fifth order expansion, under the same condition.

Note the difference of meanings between a directional verb as fourth order expansion and as fifth order expansion: *meke-lam* 'he took it [he] came' versus *meke-ríam* 'he took it come', the former being translatable by 'he brought it', the latter by 'he handed it'.

¹The vowel *í* is lost preceding a semi-consonant, or when the prefix *rí* is preceded by a vowel or an *r* in certain verbal strings of frequent occurrence.

²The vowel *í* is lost preceding a semi-consonant.

³But not necessarily, if they are both transitive, the same object. Cf. examples in this paragraph.

e) a fifth order expansion, consisting of any one of the following:

1. an adverb, e.g. *mænr-tor* 'he cries ALL THE TIME'.
2. an adjective, e.g. *alam-hyr-metrin* 'I'll come to get it later' (lit.: *I will come to get it SLOW*). This adjective itself may take an expansion consisting of either another adjective or of an adverb, e.g. *mææðheri-βoyβoy-usi+n* 'he knows it VERY well', *mææðheri-βoyβoy-reyreyin* 'he knows it EXTREMELY well'.
3. the adjectivoid *pel* 'other', which in this case takes the form *ppel*, and may itself take an expansion consisting of either the adverb *usi* 'very' or the adjective *kri* 'small', e.g. *meye-ppel-kri* 'it goes - other - small', i.e. 'it is slightly different'.
4. the locative pronoun *mæraŋ* 'before', e.g. *am'aβyæð-mæraŋin* 'I had not seen it BEFORE'.
5. the expression *hæn maha* 'without knowing, haphazardly' (formation obscure; maybe *maha* is 'west', i.e. *Big Bay*, hence 'in the manner of non-speakers of *Sakao*'), e.g. *βpr-hæn mahapin* 'he said it WITHOUT KNOWING WHAT HE WAS TALKING ABOUT'.
6. the suffixing preposition *hə-* with the ancillary pronominal suffix for regime, followed by an ordinal pronoun, denoting the number of times an action has happened, e.g. *βé yjæhæ-hæn tupin* 'when she gave birth FOR THE SECOND TIME'.

3.3.6.2. Alternatively, instead of the above expansions, the verbs *ssyl* 'to insult him', *wpr* 'to say it', *wel* 'to call it', when string-initial, may take an expansion consisting of a noun, itself expandable. Such an expansion is an appellative complement, e.g. *i messyl-analopin yam* 'you insulted us, calling us *analo*'¹, *ða yaβel-riðjæŋérin* "ða yaβel-riðeneŋérin" 'some they call "THEIR AUNTS", some they call "THEIR UNCLES"' (names given to *laplap* puddings at a wedding).

3.3.6.3. The transitive verb *jæk* 'to show it' always occurs string-initially, and may take only an expansion consisting of the directional preposition *kæ-* or *k=* without the directional prefix *ri*, e.g. *Jæk-kyy aha!* 'show ME the road'.

3.3.6.4. Some forms attest of no longer productive formations. Such are:

rottæpr 'to be near it' from *ró* 'to stay' and *pr* 'to be near it'.

rottoyon 'to hide' from *ró* 'to stay' and *yon* a form only found in a few compound verbs.

¹An unidentified fish species.

keroyon 'to hide it' from ke 'to take it' and yon.

rotallam 'to come near' from ró 'to stay' and lam 'to come'.

kælsa 'to look up' and kælsu 'to look down', há·su 'to dive', há-sa 'to come to the surface', from kæl 'to seek it', há 'to flee', sa 'up', and su 'down'.

3.4. EXPANSIONS OF PHRASES

3.4.0. Phrases, as hitherto generated by the basic phrase formulae and the regimes and expansions of their constituents, may take expansions. These expansions either determine a constituent of the phrase (which itself may be a regime or an expansion of another constituent) or, in the case of modal particles, the referent of the phrase as a whole.

3.4.1. A phrase may take the following expansions:

a) first order expansion consisting of one of the following:

1. a nominal demonstrative, provided that the phrase contains a noun and no previous nominal demonstrative. If the phrase contains several nouns, the nominal demonstrative may determine any one of them.

2. the nominal demonstrative ker 'this' if the phrase ends with the locative pronoun manó 'today'. The expression thus formed is translatable by 'nowadays', e.g. aðæra enen manó ker 'people of nowadays'.

3. the nominal demonstrative með 'this' if the phrase ends with the locative pronoun mæra 'before', e.g. mæra með 'HERE in the past'.

b) a second order expansion consisting of the modal particle riþyl 'again'. However, if a 9th or 10th order expansion occurs, this particle comes in 11th order position instead of second.

c) a third order expansion consisting of the modal particle þi 'just, only'.

d) a fourth order expansion consisting of the modal particle rær 'but'.

e) a fifth order expansion consisting of the modal particle þoy 'too, also'.

f) a sixth order expansion consisting of the modal particle na 'then'.

g) a seventh order expansion consisting of the modal particle þa 'still'.

h) an eighth order expansion consisting of the modal particle íe 'certainly' or of the modal particle þyn 'maybe'.

1) a ninth order expansion consisting of a numeral provided that:
 1. a noun occurs in the phrase, which noun is then determined by that numeral, e.g. æscæl-ƿt-ȝær hæŋ æβƿt-wari enen mærcæŋ té 'A STORY of the oldsters of long ago'.

2. or that the phrase (disregarding its expansions) ends with a trial personal pronoun or trial personal pronominal suffix, which the numeral then determines, e.g. jær·ðæŋ ƿl læn 'just the FIVE of them'.

3. or that the phrase ends (disregarding its expansions) with a general demonstrative pronoun uninflected for the plural, e.g. wƿm ƿl ru 'just those two'.

4. and provided that the phrase (disregarding its expansions) ends neither with a numeral nor with a nominal demonstrative inflected for the plural.

j) a tenth order expansion consisting of an adnomen, provided that:
 1. a 9th order expansion occurs, which this adnomen then determines, e.g. assaru té tīkyn 'ONLY ONE story'.

2. or that the phrase contains a noun other than an included object or a constituent of an appellative complement, which noun the adnomen then determines, e.g. assaru enen æβƿt-wari enen mærcæŋ jrép 'ALL THE STORIES about the oldsters of long ago'.

3. or that the phrase ends (disregarding its expansions) with a personal pronoun or a personal pronominal suffix, or a numeral, which the adnomen then determines, e.g. jær jrép 'all of them'. When the adnomen determines a numeral, it is shifted to second order position, immediately after that numeral, e.g. té tīkyn ƿl '[just] ONLY ONE'.

k) an eleventh order expansion: cf. the second order expansion.

l) a twelfth order expansion consisting of the modal particle *pe* 'rather'.

m) a thirteenth order expansion consisting of a demonstrative deictic, e.g. nær·kar mam ƿl na βa non 'this HERE sacred stone' (lit.: sacred stone this just then still HERE).

CHAPTER 4: SYNTAX

4.1. SENTENCE TYPES AND FORMULAE

There are two main types of sentences: *major* and *minor*.

4.1.1. Minor sentences

A minor sentence carries information that is sufficient only in a context, e.g. *ðóð* '*there*' carries sufficient information only as an answer to a question or as an "afterthought" to a major sentence. The phrase *ðóð* could be developed ad infinitum and still not convey any independent information, e.g. *ðóð lyβJéi hæn aatyr ðm ni rki tyl ða mærcæn γamhy-γælr ðóð lænnan βé γiηor lopór/* '*there in the nakamal of that chief whom some men-bush long ago shot and missed, there on his bed when he was sleeping at night*'.

4.1.1.1. A minor sentence consists of either a completive nominal phrase or a temporal verbal phrase, e.g. *ðóð* '*there*', *βé γiηor* '*when he sleeps*'.

4.1.2. Major sentences

A major sentence is a statement or a question conveying sufficient information without the help of a context, e.g. *eγenl té njó* '*that's a tree*', *mγe?* '*where do you go?*'.

4.1.2.1. A major sentence consists of a rheme optionally preceded by a theme.

4.1.2.2. The rheme conveys the information proper, and consists of a predicate, which is itself constituted by a stative phrase, either verbal or nominal.

4.1.2.3. The theme states the limits and circumstances within which the information contained in the rheme applies. A theme is composed of one or several subthemes, each subtheme defining the limits and circumstances of the subsequent one, e.g. [γam][t'é βé γineð][tim'apðær] '*we (subtheme)[when one dies (subtheme)][one does not bury him (rheme)]*', i.e. '*we don't bury our dead*'.

4.1.2.4. A subtheme consists of any one of the following:

a) a predicate introduced by wé 'if, as for, whereas', e.g. wé [i][mβys-nøttur] '*if [you][behave correctly]*'; wé [aha][pere] '*if [the road][is long]*'; wé [yé][γim'apjan] '*if [you][don't go]*'. If the subject of the predicate is supplemented by a noun, numeral or nominalised adjective or adjectivoid in the irrealis, the introducing particle wé may be left out, e.g. (wé) [it'é][γigor][læn] '*if [anyone][had slept][in it]*'.

b) a temporal verbal phrase, optionally introduced by wé, unless this temporal phrase itself starts with wé, in which case one is left out, e.g. (wé) [βé γ+γe][lænes] '*whereas [when he rides][on birds]*'; but: [wé mjan] '*when you go*' not introduced by wé.

NB. When several temporal phrases occur in succession, all sharing the same subject and all referring to either the future, or the past or present, all the introducing quotative verbs, except the first one, may be left out, e.g. [βé γ+lam][βé γ+holtr] or [βé γ+lam][γ+holtr] '*when he came[and flew around]*'.

c) a stative or locative nominal phrase optionally introduced by wé, e.g. [γam][t'é βé γineð] '*AS FOR US[when one dies]*'; wé [ðað rær] '*whereas [HERE ON THE CONTRARY]*'.

4.2. SUPPLEMENTATION

4.2.0. Generalities

Phrases and predicates may be developed by supplementation. A supplementation is a phrase or a predicate which bears some anaphoric relationship with the phrase or predicate it supplements.

For example, [aatyr][mliipin][ara][amas] '*the chief killed the pig with a club*', literally: [chief][he killed it with it][pig][club]. The phrases [aatyr] '*chief*', [ara] '*pig*', and [amas] '*club*' are said to supplement the participants of the predicate [mliipin] '*he killed it with it*', [aatyr] supplementing the subject, [ara] the object, and [amas] the instrument.

Appositions and relative clauses are rendered in Sakao by supplementations, e.g. [olom om][γamgor][læn] '*the house where they slept*', lit.:

[*that house*][*they slept*][*in it*], the predicate [γamηor] supplementing the phrase [o|om om] through its complementation [læn] '*in it*'. Or: [rki][am'ssym-ró] '*people who drink liquor*', literally: [*people*][*those who drink liquor*] the participle [ussym-ró] supplementing [rki].

Except in a few cases¹, supplementations immediately precede or follow the phrases or predicates they supplement.

By definition, a left supplementation precedes the phrase or predicate it supplements, and a right supplementation follows it.

4.2.1. The supplementations of verbal phrases

A verbal phrase may take:

a) a left supplementation supplementing its subject, and consisting of one of the following:

1. a stative nominal phrase other than a gerund, e.g. [rki][γamssym-ró] '*people are drinking liquor*', literally: [*people*][*they drink liquor*]; [jæn][am'aβγæðherl] '*I don't know*', literally: [*I*][*I don't know it*].

2. a predicate, e.g. [æβyð-amarkar][βesi][meyr][ðor] '*that is why children are disobedient*', literally: [*children's heads*][*it is hard*][*it goes*][*there*], where the predicate [βesi] supplements the subject of [meyr], and has its own subject supplemented by [æβyð-amarkar]. Note that this construction is the only way of negating nominal predicates, e.g. [jæn][per][meré] '*I am not a padre*', literally: [*I*][*padre*][*it is not*], i.e. '*that I am a padre is not*'.

b) a right supplementation supplementing its object, and consisting of one of the following:

1. a stative nominal phrase other than a gerund, e.g. [wom][mli:l] [ere] '*that one kills intersex pigs*', literally: [*that one*][*he kills it*][*intersex pig(s)*].

2. a predicate optionally introduced by wé, e.g. [maaβγæðherl] wé [meneð] '*he did not know that she was dead*', literally: [*he did not know it*][*that*][*she is dead*].

3. if the initial verb is γæðherl '*to know it*', nps '*to like/love/want it*', or sækpl '*to dislike it*', a gerund, e.g. [jæn][amsækpl] [eneð-say|é] '*I don't want to die young*', literally: [*I*][*I dislike it*][*dying early*]; [t'é][βé γinps][æγæn][t'é] '*when someone wants to eat one*', literally: [*one*][*when he wants it*][*eating*][*one*]; [amγæðherl][æwys] '*I can do it*', literally: [*I know it*][*doing it*].

c) a right supplementation supplementing its instrument, and consisting of a stative nominal phrase other than a gerund, e.g. [mli:lpin]

¹Compare 4.3.3. p. 76.

[né ɒm] 'he killed him with that axe', literally: [he killed him with it][that axe]; [tɪβaha-ɣorɪn][aron][æryr wóɣ] 'they blindfolded him with a white cloth', literally: [they tied-concealed it with it][his face][white cloth].

d) if the verbal phrase contains a non-interrogative demonstrative adjective, a right supplementation supplementing that adjective, and consisting of a phrase, e.g. [mɪlrosu-ðamam non][i] 'he was sitting like you are', literally: [he was sitting - like this][you]; [mβys-ðemerɪpɪn][aβɔr-rkym]? 'did you touch him as I told you to?', literally: [you touched - like that him][I said it to you]?

The supplementation of a demonstrative adjective immediately follows the phrase it supplements. The relative order of the other two right supplementations is free, e.g. [mɪllpɪn][ara][amas] or [mɪllpɪn][amas][ara] 'he killed the pig with a club'.

4.2.2. The supplementations of nominal phrases

A nominal phrase other than a gerund or a participle may take:

a) if it is a predicate, a left supplementation consisting of a stative nominal phrase other than a gerund, e.g. [ó nɔ́][aðaɣ tɛ́] 'that is a banian', literally: [that there][a banian]. This construction renders equational sentences.

b) a right supplementation consisting of one of the following:

1. a stative nominal phrase other than a gerund, e.g. [tɪmhɔp][ahaɪ][oɔan][ðóð] 'they followed the road that goes there', literally: [they followed it][road][the one which goes][there], where [oɔan] supplements [ahaɪ].

2. a stative verbal phrase other than quotative, provided that either one of its participants or one of its complementations bears an anaphoric relationship with the nominal phrase being supplemented, e.g. [æβɔt-warɪ ɒm][manpór][malamp][mæɣɣn][nɔru] 'that oldster who came yesterday has name Noru', literally: [that oldster][yesterday][he came][he has name][Noru]; [aðæŋæŋ ɒm][tɪmhɔp][mæɣɣn][ŋɔr] 'the name of the man who was shot is Ngor', literally: [that man][they shot him][he has name][Ngor]; [amas með][tɪm'ɪlɪn][æβyrɔr][eyeni tɪβle ɒɪ] 'the club with which the pigs of the Vuriar ritual are killed is but a plain stick', literally: [this club][they kill it with it][Vuriar][just plain wood]; [eseβyr ɒm][tɪmkep][ara tɛ́][hɔn] 'the sorcerer to whom they gave a pig', literally: [that sorcerer][they took it][a pig][for him]; [oɪom ɒm][moŋɔr][ɪæn] 'the house where he sleeps', literally: [that house][he sleeps][in it]; [eyeni][tɪmtterɛ-ɣorɪn][ahaɪ] 'they are woods with which

the door is closed', literally: [wood][they stand-block it with it][road].

3. one of the locative pronouns *mei* 'north', *mys* 'south', *maha* 'west', *mohu* 'east', *mityl* 'above', *maðan* 'below', e.g. [æryr][mei] 'the white man who lives north of here', literally: [white man][north].

4. if the nominal phrase contains a non-interrogative demonstrative adjective, a phrase supplementing this demonstrative adjective, e.g. [æplaŋ ðamam non][mæhæ-ryr] 'wooden boards like those of the white men', literally: [planks like this here][white men's].

5. if the nominal phrase consists of the demonstrative pronoun *wðm*, a predicate or a temporal verbal phrase. The pronoun *wðm* then takes the meaning of 'when, as', e.g. [wðm ni][tamhiðé-ryr-notturin] 'when we have it straight above the head [the sun]', i.e. 'at noon', literally: [that there][we carry it on the head - straight]; *wé* [wðm ni][tiþé tjetilé] 'whereas when they see her off', literally: *whereas* [that there][when they see her off].

4.3. COMPLEMENTATION

4.3.0. Generalities

Phrases and predicates may be developed by complementation. Complementations are completive or temporal phrases which explicit the circumstances of the phrase or the predicate they complement.

4.3.1. The complementations of verbal phrases

A verbal phrase other than a quotative one may take for complementations:

a) completive nominal phrases, e.g. [tót][tænæð ité][nney] 'cut a coconut for me to drink', literally: [cut it off][coconut][for me to drink]; [mi|rosur][lyþjél høn] 'he was sitting in his *nakamal*', literally: [he was sitting][in his *nakamal*]; [mi|lp][ðaru] 'he struck it twice', literally: [he struck it][twice]; ton [majan][tæhøn] 'he might have gone somewhere', literally: *maybe* [he went][place]; [mryrp][je]? 'where do you come from?', literally: [you had remained][where]?

b) temporal verbal phrases, e.g. [tihe:in][wé mþor][lopór] 'they will guard it when you sleep at night', literally: [they will guard it][when you sleep][at night].

c) stative nominal phrases denoting length of time or (a recent introduction) distance, e.g. [mi|ró][ehié ðæl] 'he stayed three years', literally: [he stayed][three years]; [amjaljal][ek|lometar] 'I walked

for two kilometres', literally: [I walked][two kilometres].

d) a comparative complementation consisting of the quotative verb wé in the 3rd person singular realis, followed by a nominal phrase, e.g. [m+kr+][βé en+t+]['it is as small as a needle', literally: [it is small][it says needle].

e) a stative nominal phrase consisting of the demonstrative pronoun wóm supplemented by a predicate or a temporal verbal phrase, e.g. [t+he+n][wóm ni][wé m+or] 'they will guard it when you sleep', literally: [they will guard it][that there][when you sleep].

4.3.2. The complementations of nominal phrases

A nominal phrase may take for complementations:

a) completive nominal phrases denoting spatial or temporal location, e.g. [eseþyr wóm té][mæ+ræn][mes+i+né] 'that sorcerer long ago was wrong', literally: [that sorcerer][long ago][he was wrong]; [ara té][ðóð][mæ+n+r+r+r] 'a pig there is grunting', literally: [a pig][there][he grunts].

b) a temporal verbal phrase, e.g. [ara wóm][mβé jeltær][lohe][eherjé té] 'the pig which was there when you arrived at the village was a tusker', literally: [that pig][when you came out][in the village][a tusker].

c) if it is a predicate, a benefactive completive nominal phrase, e.g. [ara té][høn] 'he has a pig', literally: [a pig][for him].

d) a comparative complementation (see 4.3.1.d), e.g. [ere-yen+ βérβér][βé iðei] 'large leaves like banana-leaves', literally: [large tree-leaves][it says banana].

4.3.3. Order of complementations

Complementations occur following the phrase they complement, and its supplementations, except in the following cases:

a) the iterative pronoun ðaté 'once' may precede the phrase it complements, in which case it takes the meaning of 'almost, nearly', e.g. [ðaté][arær] 'I nearly fell'; [ðaté][ehlé ru] 'almost two years'.

b) a completive phrase consisting of a benefactive preposition occurs preceding the phrase it complements if:

1. it occurs in a subtheme, e.g. wé [hæn té][op+i+luk té] 'if/when one has a cow', literally: if [for one][a cow].

2. or if it occurs as the complementation of a predicate which is

itself a supplementation, e.g. [amyæðheri] wé [hɔn][opɪluk tɛ] 'I know that he has a cow', literally: [I know it] that [for him][a cow].

3. or if it complements a nominal predicate in an optative sense, e.g. [hæy][wɔm] 'let me have that one', 'may I have that one!', literally: [for me][that one].

c) a short complementation may occur between a phrase and its supplementations if these are very lengthy, e.g. [meke-jan][ðóð][æhy ɔm] [timhypin][ó] 'he took the rifle with which that one was shot to THAT PLACE', not: meke-jan æhy ɔm timhypin ó ðóð.

The relative order of complementations is free. Usually, benefactive complementations occur first, then spatial ones, and temporal ones.

4.4. THE COMPLEMENTATIONS AND SUPPLEMENTATIONS OF GERUNDS AND PARTICIPLES

Gerunds and participles take the same complementations and right supplementations as verbal phrases. When predicates, participles take the same left supplementations as nominal phrases. Gerunds take no left supplementations.

4.5. ADJUNCTION

4.5.0. Adjunction, a process akin to coordination, is marked by adjuncts. There are four adjuncts: meré 'or', hyr¹ 'for, because', ton 'perhaps', and ye 'and'.

4.5.1. The adjunct ton is dubitative and precedes phrases or sentences, e.g. [mɪlɾó][ðað] ton [ehié ðæɪ] 'he stayed here for MAYBE THREE YEARS'.

4.5.2. The adjunct meré is alternative and precedes phrases or sentences which it connects to preceding phrases or sentences, e.g. [aðæŋ tɛ] meré [æpæs tɛ] 'a man OR a dog'.

4.5.3. The adjunct hyr is explicative, denoting cause or purpose, and precedes phrases or sentences which it connects to preceding phrases or sentences, e.g. [ɣwóp][ni] hyr [wari hɔn] 'let her hang herself BECAUSE of her husband [who died]'.

4.5.4. The adjunct ye is additive and precedes phrases or sentences

¹Pronounced hɪn in fast speech.

which it may connect to preceding phrases or sentences, in which case it is translatable by 'and', 'with (inclusive)', e.g. Joru ye tanjel 'they two with Daniel', i.e. 'Daniel and him'; [ðað] ye [ys] 'here and south', i.e. 'south of here'.

When it does not connect to a preceding phrase or sentence, ye is translatable by 'then', 'subsequently', e.g. ye [ni][βé yikkøβu] ye [aakær] ye [yamttal] 'AND when he dances, THEN the women SUBSEQUENTLY hail him'; [aarl][βé yitarl][lyβjæi][aakær] ye [yamkanele] 'when the man enters the nakamal, the women SUBSEQUENTLY withdraw'.

4.5.5. The four adjuncts are not mutually exclusive, and, were they to occur all preceding the same phrase, their order would be: meré hyr ton ye, e.g. [aakær kri té] meré ton [amarkar wari] 'a small girl OR MAYBE a male child'; ton ye [tital][ðor] 'AND MAYBE we should stop here'; hyr ye [ðað ɒl][timhyp] 'BECAUSE THEN it's here that they shot him'; hyr ton [βé [wa][wé mæhy-yælr][wa]] 'FOR MAYBE he thinks: "When this one shoots and misses this one"'.

4.5.6. The adjuncts hyr and meré, the latter optionally followed by ton, may also occur sentence-finally, in which case hyr is translatable by 'because of it', and meré denotes doubt, e.g. meke-rkæn ara té hyr/ 'he gave him a pig FOR IT'; ton yamkara-torpin æhy yamraréyin meré ton 'maybe [since] they fired their rifles all the time, they were [driven] crazy by it, WERE THEY?'

4.6. JUXTAPOSITION

4.6.1. Additive coordination of sentences and verbal phrases is more often by mere juxtaposition than by adjunction with ye, e.g. [yamðæi] [tjan][tikæe][nayamðæi] 'LET'S GO [and] COOK for ourselves'.

4.6.2. Additive coordination of more than two nominal phrases is sometimes by mere juxtaposition with intervening pauses ("), e.g. [mææræsp] [noð][æsy·kar][ara] 'he made fowls, æsy·kar birds, and pigs'.

4.6.3. Alternative coordination of a phrase containing or consisting of a numeral, and a following phrase consisting of a numeral is often by juxtaposition with a pause ("), e.g. esilen taalieð" taalru" taalðæi/ 'four, or two, or three shillings each'.

4.7. NON-SENTENTIAL FORMS

Not included in the preceding discussion were the following non-sentential forms:

mm (with a rising intonation) *'yes, that's right'*

æ *'yes'* acknowledging received information

æhæn *'no'*

hao *'all right'* expressing approval and announcing subsequent comment or action

ye *'come on!'* (an invitation to action)

hu *'wow!'* (astonishment or admiration)

ssæ *'fie!'* (scorn)

taβé *'maybe'* (indifference or irresolution)

e or o, two unstressed particles occurring only at the end of phonological phrases, the former drawing attention to a point of the question or statement preceding, the latter having a mild exclamatory overtone, e.g. hyr æhy-kar e/ *'because of the wars, YOU KNOW'*; βr|β o/ *'REALLY big!'*; tjaβwar o/ *'Good-bye!'* (literally: *'Let's not speak!'*)

APPENDIX

EXPRESSING NUMBERS ABOVE TEN

It has been seen that numbers from one to nine are expressed by numerals, and ten and multiples and powers of ten by numeral verbs. Intermediate numbers (for example, *eleven, twenty-five, a hundred and two*, etc.) are expressed in diverse ways depending on speakers. One of these ways, which is believed to be historically the original one, others being seemingly influenced by Bichelamar or Tolomako, will be detailed, after which individual variations will be given.

Numbers up to ninety-nine are expressed by a verbal phrase consisting of a numeral verb, followed by the verb *wan* 'to bear fruit', inflected for the same person and mode as the preceding numeral verb, and itself followed by a numeral, e.g. *aðæŋæn ɣamɣælté ɣaβan ru* 'twelve persons' (literally: 'they are ten and bear fruit, two'). Units may be left unspecified, e.g. *ɣamɣælté ɣaβan βa* 'more than ten' (literally: 'they are ten and still bear fruit').

Multiples of one hundred and one thousand are expressed by the numeral verbs *ter* 'hundred' and *mæn* 'thousand' complemented by an iterative pronoun, e.g. *meter ðaðæi* 'three hundred', *ɣamæn ðaru* 'they are two thousand'. When lower powers of ten are to be expressed, the use of an iterative pronoun complementing *ter* or *mæn* becomes obligatory, even for one hundred or one thousand, and those lower powers of ten follow, introduced by the expression *oβron mæhyn* 'its ear pulls it (?)', e.g. *mæn ðaté" oβron mæhyn" meter ðalén·ere·peð" oβron mæhyn" mæɣælén·ara βan lén·ere·peð* 'one thousand nine hundred and sixty-nine'.

INDIVIDUAL VARIATIONS

1. The verb *wan* always occurs in the third person singular realis, e.g. *aðæŋæn ɣamɣælté βan ru* 'twelve persons'.

2. Numeral verbs occur in the third person singular instead of the third person plural, e.g. *aðæŋæn mæγælté βan ru 'twelve persons'*.
 3. The expression *oβron mæhyn* is replaced by the adjunct *γe 'and'*, e.g. *mæn ðaru γe meter ðaðæi 'two thousand three hundred'*.
 4. Numeral verbs are used as adjectives, e.g. *aðæŋæn γælté 'ten persons'*. Units may even be expressed, introduced by *βan*, e.g. *aðæŋæn γælté βan ru 'twelve people'*.
 5. Nouns, unexpandable, are formed from numeral verbs by prefixing *\$*, e.g. *kep æγælté 'take ten'*.
-

PARSING OF THE SAMPLE TEXT

1.	æsael·rru	compound free noun	<i>half-spoken, half-sung tale</i>
2.	té	numeral, determines No.1 æsael·rru	<i>a, one</i>
3.	æmþr·jes	compound free noun	<i>young, unmarried man</i>
4.	té	cf. No.1; determines No.3 æmþr·jes	<i>a, one</i>
5.	mækyp	3rd pers. sg. realis perfective of ky	<i>he took it</i>
6.	aða	free noun	<i>bow</i>
7.	alð=	construct noun	<i>child of</i>
8.	aða	cf. No.6; regime of alð=	<i>bow</i>
9.	hþ-	lower allomorph of suffixing preposition hþ-	<i>of (general possession)</i>
10.	n	3rd pers. sg. pronominal suffix	<i>him</i>
11.	masaŋær	3rd pers. sg. realis of saŋær	<i>he went down</i>
12.	l=	construct locative preposition	<i>in, on, at</i>
13.	eðe	free noun, regime of No.11 l=	<i>sea</i>
14.	mosson	3rd pers. sg. realis tensed of son	<i>he shoots it</i>
15.	nes	free noun, included object of No.14 son	<i>fish (enes)</i>
16.	hoþ	4th order expansion of No.14 son	<i>he follows it</i>
17.	eðe	free noun	<i>sea</i>
18.	mælys	3rd pers. sg. realis of lys	<i>he walks along it</i>
19.	eðe	free noun	<i>sea</i>

20.	majan	3rd pers. sg. realis of jan	<i>he goes</i>
21.	majan	<i>idem</i>	<i>he goes</i>
22.	mæraðp	3rd pers. sg. realis perfective of rað	<i>he climbed it</i>
23.	eýeni	free noun	<i>tree</i>
24.	kité	definite numeral, determines No.23 eýeni	<i>a certain</i>
25.	eýeni	cf. No.23	<i>tree</i>
26.	með	non-present, immediate nominal demonstrative, determines No.25 eýeni	<i>this</i>
27.	tíþrín	indefinite realis of wör inflected for participation (triple)	<i>one says it by it</i>
28.	æþælyt	free noun	<i>bourao</i>
29.	h=	construct possessive preposition, expands No.28 æþælyt	<i>of</i>
30.	æþe·kar	compound free noun, regime of No.29 h=	<i>"red-chin"</i>
31.	mæraðp	cf. No.22	<i>he climbed it</i>
32.	mekersa	3rd pers. sg. realis of kersa	<i>he goes up</i>
33.	mílró	3rd pers. sg. realis perdurative of ró	<i>he kept staying</i>
34.	læ-	suffixing locative preposition, lower allomorph	<i>in, at, on</i>
35.	n	cf. No.10; regime of No.34 læ-	<i>it</i>
36.	mílkælsu	3rd pers. sg. realis perdurative of kælsu	<i>he kept looking down</i>
37.	nnör	non-present remote clausal demonstrative pronoun	<i>then</i>

38.	mæγæð	3rd pers. sg. realis of γæð	<i>he sees it</i>
39.	æwɔr=	construct noun	<i>small of</i>
40.	nalo-hal	compound free noun regime of No.39 æwɔr=	<i>fish species (analo-hal)</i>
41.	té	numeral, determines No.39 æwɔr=	<i>a, one</i>
42.	æwɔr=	cf. No.39	<i>small of</i>
43.	nalo-hal	cf. No.40	<i>fish species</i>
44.	með	cf. No.26, determines No.39 æwɔr=	<i>this</i>
45.	malam	3rd pers. sg. realis of lam	<i>it comes</i>
46.	malam	<i>idem</i>	<i>it comes</i>

TRANSLATION

(text phonemicised)

l= æβyŋ-ɔ́r tɛ́" naðæŋən nan l= ohe tɛ́ ɣaβɔr - hoβ ɣabé"
on evening a, persons of in village a they say - follow it they say:

jɛ́r takersa l=aðalan/ jɛ́r taket terlen ppere tɛ́"
"We we shall go up to clouds. We shall take bamboo long a,

taposr" tatété -hoβ jɛ́r takersa/
we shall plant it, we shall hold each other -follow it us we shall go up."

ɣamkep nerien tɛ́" ɣaposr tɛ́ marjer opel tɛ́ mjelt-risa
They took it bamboo a, they planted it. One stood, other one jumped up

marjer l=æðɔl-ɔ́arke nan/ ɣe opel tɛ́ mkersa marjer ly-n/
he stood on shoulders his. And other one a he went up he stood on him.

ɣe opel tɛ́ mkersa marjer/ ɣamilhoβ - ðemeðɪn
And other one a he went up he stood. They followed it like this

mkersa mjan" oró llɔð ttær mroy"
it went up it went, the one who stayed on ground extreme he felt it,

rki ɣaββiŋən/ mjaajaan naðæŋən oró llɔð
people were heavy. It went on and on person he who stayed on ground

ttær mrer/ βé ɣrer" jɛ́r Jrép ɣamrerp/ ɣamkar
extreme he fell. When he fell, they all they fell. They flew

- jeljel" tɛ́ mrer - myl" tɛ́ mrer - hu"
jumped all about, one he fell went south, one he fell went east,

tɛ́ mrer - haβyl" tɛ́ mrer hatær/ jɛ́r ɔy
one he fell went west, one he fell went north. They even

ɣam'aβɣéðɣáð jɛ́r/ nnɔr" βé ɣiðemeð" ys
did not see one another them. Then, when it was like this, in the south

mkep nwar pel'' jehu mkep nwar
he took it language different, in the east he took it language

pel'' jel mkep nwar pel'' jeha
different, in the north he took it language different, in the west

mkep nwar pel/ mɔryŋ nwar té tikyn''
he took it language different. Before language one only,

mJaaaJan Jór γαβέ γαρερ - ðemeð'' nnɔr na nwar
it went on and on they when they fell like this, then then languages

βorye/
it was many.

One evening, the people of a village said: "Let's climb to the clouds. Let's take a long bamboo and plant it, and let's climb it, each one holding the next one". They took a bamboo and planted it. One of them stood; another jumped up and stood on his shoulders. And another one came up and stood on him. They kept on climbing [that bamboo] in this fashion, up and up. The one right down on the ground felt the weight of the others. Eventually, the one right down on the ground fell. As he fell, they all fell. They fell all about, one fell to the south, one to the east, one to the west, one to the north. They could not even see one another. Then the one in the south took a different language, the one in the east took a different language, the one in the north took a different language. Before, there had been only one language, until they fell like this. Then there were many languages.
