

Enterprise Cybersecurity Architecture Domain Mapping

The Governor's View is not a SABSA architecture layer. It is a collection of relevant viewpoints related to governance. This includes architecture governance which can be augmented by COBIT, which contains Enterprise Architecture controls. Enterprise Architecture controls can be extended or adapted to Enterprise Cybersecurity Architecture.

Requirements Management in TOGAF is an "all-roads lead here" view in the TOGAF ADM. Therefore, all architecture associations lead to requirements development and management.
