

# glTF Update and Roadmap

July 27, 2016

Tony Parisi  
glTF Specification Co-Editor

[tparisi@gmail.com](mailto:tparisi@gmail.com) [@auradeluxe](https://twitter.com/auradeluxe)

# Background and Motivation

- **OpenGL ES and WebGL have led to a proliferation of 3D, but no standard way to deliver data into applications**
  - Efficient transmission
  - Full scene information
  - Vendor- and runtime-neutral

*OBJ - too simple - COLLADA - too bulky - FBX - vendor-specific*

- **As a result, content and app creators were developing a new pipeline for each project**
  - Huge inefficiencies
  - Limited opportunities for sharing data among applications

# The “JPEG of 3D”

**Compact to Transmit**

**Fast to Load**

**Runtime Neutral**

**Extensible**

# Timeline

# glTF Structure

Describes full scenes-  
not just meshes

**.gltf**

JSON describes node hierarchy, materials, cameras

**.bin**

Geometry: vertices and indices  
Animation: key-frames  
Skins: inverse-bind matrices

**.glsl**

Shaders

**.png**

**.jpg**

...

Textures

NORAD's Santa Tracker

# Extensions

- Syntax and name registry for extending the base specification
  - [KHR\\_binary\\_glTF](#) - binary container format, single payload - ratified
  - [KHR\\_materials\\_common](#) - common fixed function materials and lights e.g.
  - Vendor extensions e.g. [CESIUM\\_RTC](#), [WEB3D\\_quantized\\_attributes](#)
- Keeps the base spec small while allow for experimentation and domain-specific use cases
- Popular extension can potentially be promoted to the base spec

File declares  
extensions used up front

```
"extensionsUsed" : [  
  "KHR_binary_glTF"  
]
```

“extensions”  
property contains  
the data

```
"a_shader" : {  
  "extensions" : {  
    "binary_glTF" : {  
      "bufferView" : // ...  
    }  
  }  
}
```

# Adoption

## Oculus Executive Calls For 3D Equivalent Of JPEG To Build The Metaverse

by IAN HAMILTON • JULY 22ND, 2016

A new standard for 3D scenes is gaining momentum with support from graphics industry leaders, potentially laying the groundwork for science fiction's "metaverse" to be realized.

The GL Transmission Format (glTF) from The Khronos Group, a computer graphics industry standards body, could also put magnitudes more 3D content on the Internet. The Khronos Group is responsible for a variety of technologies critical to the computer graphics industry, including OpenGL, Vulkan, OpenCL, and

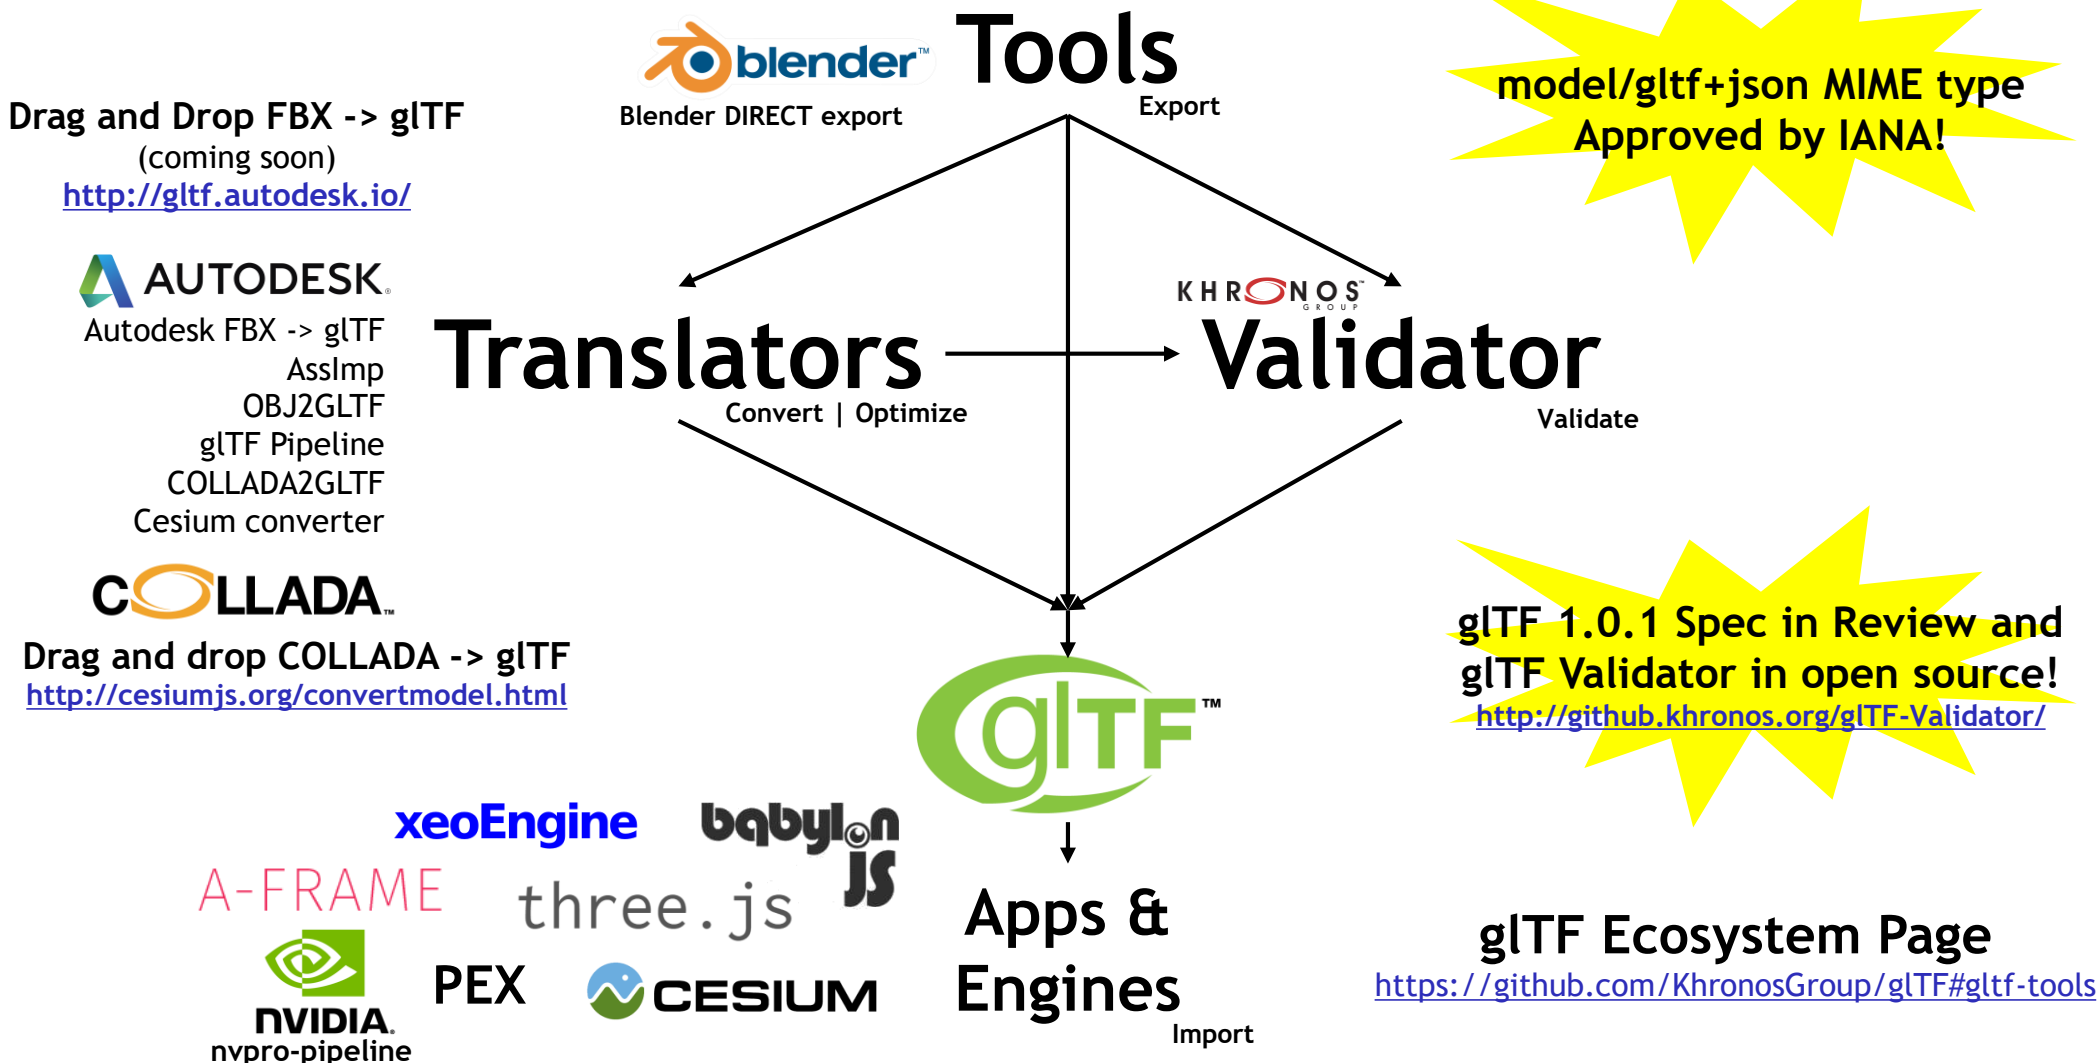

Publicly Stated Support for glTF

# With New Formats Come New Opportunities!

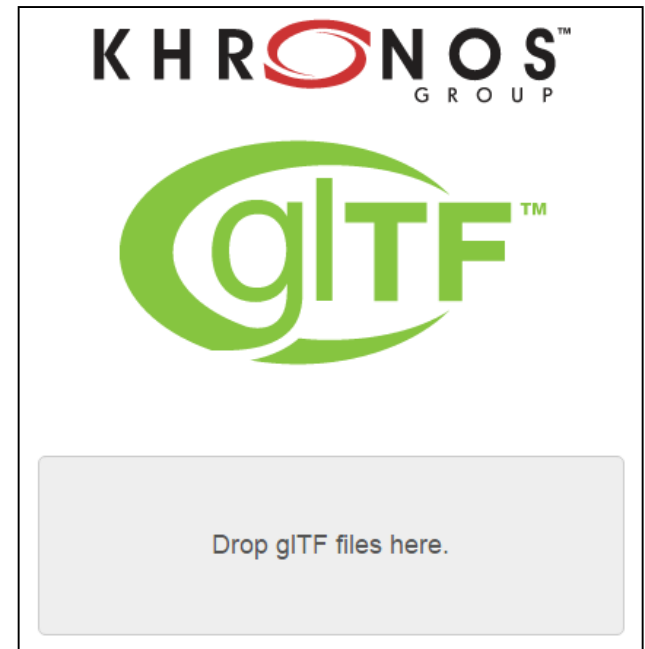

# glTF Ecosystem News!

# glTF 1.0.1 Validator

- glTF 1.0.1 tightens specification
  - For robust validation and interoperability  
<https://github.com/KhronosGroup/glTF/issues/605>
- Validator in open source on GitHub
  - Khronos Validator project RFQ awarded to Alexey Knyazev - doing awesome work!
  - Rigorous checking for correctly formed glTF files
  - Checks JSON syntax, all property details, GL parameter combinations etc. etc.
  - Built using Dart (easy API level integration)
  - Shipping today as client-side drag-n-drop and command-line wrapper
  - Client-side JavaScript library coming soon
  - Extensible - validation plugins for extensions - output can be integrated into the validation report

<http://github.khronos.org/glTF-Validator/>

**Please give us feedback on GitHub!**

# Roadmap Discussion Topics

## Physically Based Rendering

Modern, compact, scalable  
Fraunhofer, NVIDIA MDL

## Streaming and Mesh Compression

MPEG 3DGC (royalty-free), Fraunhofer SRC

## Enhanced API Support

Make efficient use of  
WebGL 2.0 and Vulkan

## Enhanced Animation

Morph Targets

## Advanced Surfaces

Pixar's OpenSubdiv?

## Increased Efficiency

Improved parsing, arrays, bounding boxes,  
spatial constructs

**Must avoid the complexity trap!**

**Core glTF must remain efficient and straightforward to use  
Extensions for domain specific functionality**

**Come to the glTF Community on GitHub**

<https://github.com/KhronosGroup/glTF>

**Or join Khronos to get directly involved!**
