OVERVIEW

At Revolo Infotech, we are very fascinated by how Information Technology changes everything, and how it shapes the world. That's why we strive to be the front-runners in the IT sector.

Revolotech Infotech is a provider of IT services and a creator of Software Products. Revolo has a diverse clientele- from Multinationals to Startups; in diverse industries.

After working with hundreds of clients globally, we have insights into what problems you are facing, and at what stage of your business. We solve these problems using technology.

Once you partner with Revolo Infotech, we become an extended part of your team to take all your tech decisions for you - from creating the architecture to actually implementing it, testing it, and deploying it.

WHAT WE DO

Software Products

We have created software products with end-to-end features, data analytics, API integration, & mobile integration in Industries like Finance and Logistics.

Application Development

We specialize in Software & App Development, Digital Transformation, API integration, workflow management and automation.

Solution Development

We have expertise with Artificial Intelligence, Machine Learning, Blockchain, Microsoft teams apps, and various other applications.

OUR CLIENTS

KEY FEATURES

Expert consultation

We use industry insights and experience to correctly implement ideas, without the need for years of experimentation! We know the right technology, techniques, and strategies that can be used.

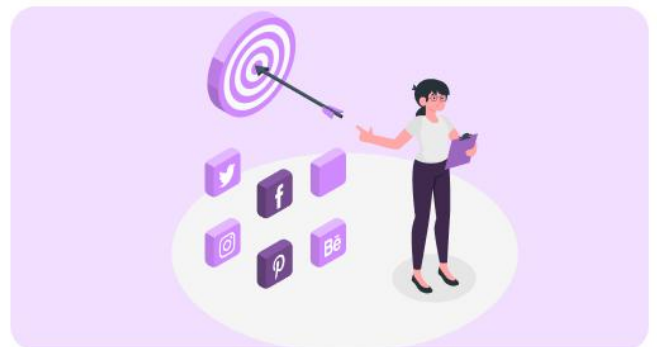

Future Proof

Whether it is Blockchain technology, Natural Language Processing, Computer Vision, AI-Driven chatbots, Data-Science, Machine Learning, or Artificial Intelligence: We have it covered.

Secure & Encrypted

We follow extremely high standards of security and encryption. Our data storage is highly secure and automatically backed up. Data is always confidential with us.

API Integrations

We have automated several workflows in several projects by gathering information from 3rd party applications automatically, using APIs. With APIs, we reduce data entry, provide quicker response times, and automate workflows.

SOFTWARE PRODUCTS

LOGISTICS SECTOR

TruckToday: ERP for Truckers

Revolotech Logistics Software has been built by Logistics Experts.

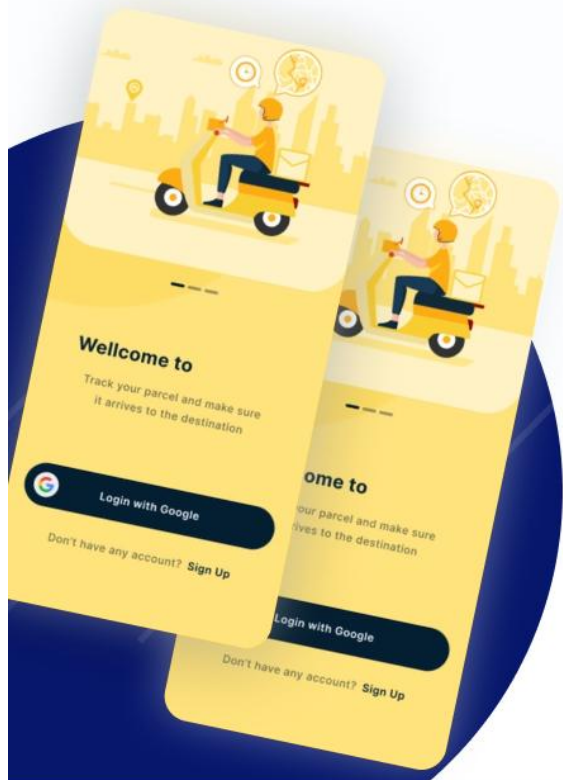

- Our software brings about a 25+% Productivity rise by automation using integrations with Fastag, IOCL, Tally, GPS, etc.
- All Operations are on a single screen- extremely easy to use.
- Dedicated mobile app for Drivers
- Extensive built-in validations, and systems to avoid issues that are made in Operations.
- Control tower for Data analytics of crucial data.
- Analytics for Bills, Daily loading-unloading, License/ Insurance expiries, Operational failures, etc

Parcel-track: ERP for Parcel companies

With Revolotech's Parcel-track, Parcel companies can manage their entire business:

- Branch-wise Bookings, Stock, Unclaimed packages, Delivery reports and Pending Deliveries.
- Never lose a parcel again: Parcel-track ERP shows every branch their incoming parcels for the day. Planning is made simpler.
- Billing: Parcel-track ERP keeps track of all unpaid bills, and allows you to create bills in several different formats. Parcel-track ERP can also directly send emails to your clients with the bill, at the click of a button.
- Data Analytics: To-Pay receivables, Tracking of Paid and On-Account bookings, user-wise cash record during bookings, delivery, cashbook, GST Reports, and many more.

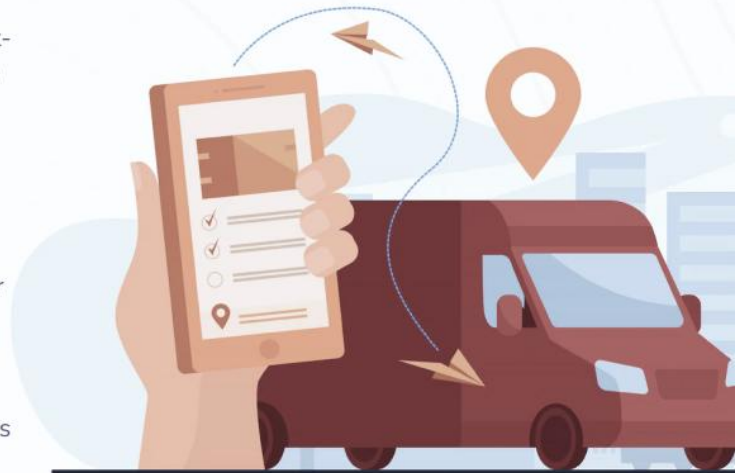

SOFTWARE PRODUCTS

TAPP: Mobile application for Logistics

TAPP is the Transporter's app. With several tools for people who manage Logistics, this app is the swiss knife that every transporter must have. There are tools that corporates also use to manage their supply chain.

- **Last-Mile Delivery:** This allows companies to plan their last-mile deliveries, create delivery-run sheets, and assign them to the delivery boys. The app then allows the manager to track the delivery boy, manage Proof-of-deliveries, and collect signatures from consignees.
- **Vendor Management:** Used by people who outsource their Logistics, it allows the user to assign shipments to a vendor and track the vendor.
- **Route optimization:** Find the best route to send your truck. With data on fuel stops, eateries, and other information, this tool is the smart Logistician's best friend.
- **Toll, Fuel data:** Get data on tolls and fuel pricing across different routes. Know the best stops to re-fuel and plan your routes better with data.
- **And much more!**

Logistics-manager:

A system for Corporate Shippers to manage their Logistics service providers

- **Create a Tender:** Whenever the shipper requires vehicles for their shipments, they can put up a tender where Logistics companies can bid. The shipper's team can accept the lowest bid or choose from different options based on the services being provided.
- **Proof of Delivery:** Used by people who outsource their Logistics, it allows the user to assign shipments to a vendor and track the vendor.
- **Route optimization:** Find the best route to send your truck. With data on fuel stops, eateries, and other information, this tool is the smart Logistician's best friend.

SOFTWARE PRODUCTS

FINANCE SECTOR

Finyco:

An end-to-end system for Finance companies that work on Fixed Income Securities

- Calculation of Yield, Price: Our system accurately calculates yield and price up to 64 decimals. Our algorithms are geared for Government securities as well as corporate securities.
- Maker-Checker system: For all deals entered, there is a 2 step verification process that allows the front-office and back-office to verify that the details of the deal are acceptable, and correctly entered.
- Reporting with BSE and NSE: We have integrated APIs with BSE and NSE to report the deals with these exchanges.
- End-to-End: We have several masters and features that make it easy to focus on the important aspects of business. Make data-driven decisions through Data Analytics, notifications and Email integration.

New-Issue:

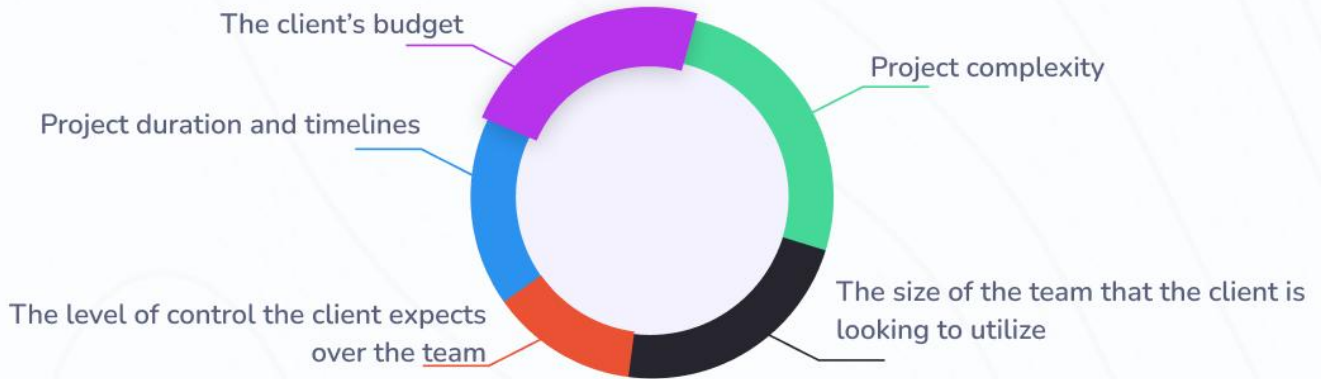

A tool that allows Finance companies to host IPOs for Debt and Equity

- Apply online: Our system allows investors to apply for IPOs online through a portal.
- Reporting: The company can then report these applications to BSE through our API, which allows companies to report with a single click.
- Data analytics: We provide data analytics to investors as well as the finance company. We show reports like upcoming IPOs, book-building, IPO subscriptions, etc. For the finance company using this system, we provide analytics of the number of applications, total applied amount, and various other key metrics.

PRICING MODEL

We work with flexible pricing models based on the type of requirements presented by the client.

We recommend the following pricing models:

Fixed-Price Model:

A fixed budget is set based on the scope of work. Bills are raised on achieving certain milestones. Good for clients who have a Fixed budget, have a fixed timeline, and a fixed scope of work.

Time and Material Model:

You are informed about what all resources will be utilized, what they will cost, and how much work will get completed using those resources in a particular month. Billing happens on a monthly basis based on the resources utilized.

Good for clients who have a long-term development scope, where ideas require experimentation, and where there are several ideas that can keep getting implemented.

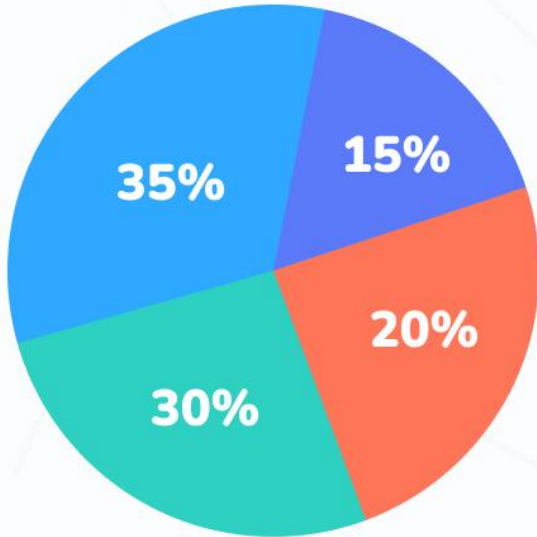

Dedicated Team Model:

You can hire resources for a long period of time, and Revolo will ensure that efficiency is maintained while following the best practices. Using such a model, you can outsource your entire development.

Good for clients that require technology to play a large role in their business and want to solely focus on implementing their ideas while leaving the development to us.

FAQs

How's working with Revolo Infotech different from working with other companies or freelancers?

3 things are very important to us: Estimating Project timelines accurately, having rigorous quality control processes and innovating to create amazing solutions. We built our company around systems that prioritize these 3 things more than anything. We have experts from different domains with well-defined processes to take care of your every need. When we work together, the process will be smooth, and we will develop the best processes for your ideas.

How long will it take? I have a strict and stringent timeline.

For large projects where the scope might not be well-defined, we focus on building a Minimum Viable Product and then gather market feedback to guide the direction of development. For projects with a known scope of work, we work on the parallel development of multiple modules to reduce the time required. We provide accurate timelines after understanding your idea, and we deliver small chunks of the project as soon as they are developed so that you can get started with implementing your idea. This way, you don't have to wait until all the development is completed. Thereafter, we deliver the final product in the timeline that has been discussed with you.

I don't know much about development! How will I understand the progress of my work when Revolo is developing a software/ App for me?

Our project coordinators will communicate with you on a daily basis to keep you updated with the progress. We will have weekly demonstrations with your team to further understand the direction in which the development is going. We will also provide you with access to our internal systems so that you can view the development plans, the developers that are working on your project, tasks that they are working on, architecture, data flow, and all the details of the project. Moreover, you will see us achieving the timelines that we gave you so that you don't have to worry about all the other things.

Is my data secure with Revolo?

Yes, it is secure. We follow several security standards like encryption and other security strategies that we have worked on for several years. We also have a state-of-the-art backup system that allows automatic backups every 6 hours. We strictly follow Non-Disclosure for any data, and we abide by stringent security and privacy policies that have allowed us to work with several financial corporations and multinationals. All your ideas are safe with us.

I want access to the code written. Is that possible?

Yes! It's possible. But you'll never need it because we are always there to service your every requirement. We want to be the only technology company you will ever deal with so that you can leave all your tech to us and handle your Operations. We are the technology partner to several corporates and startups because we can get it done better and cheaper than you'd be able to with a tech team.

What's it going to cost? Should I worry about any hidden costs?

We will tell you all the costs upfront when we discuss your idea. There will be no hidden costs and you will be given an estimate for the project at the start of the project. We have systems that allow us to be extremely effective and efficient to bring your costs down, and with our development experience, you will receive the best development services available. We can also discuss different strategies to bring down the costs of implementing your idea, and we will use the best practices to bring your long-term costs of Operations and Implementation down.
